

Figure S1. FTY720 does not affect MM cell migration. (A) MILL and PHI cells were treated with FTY720 (2 μ M) or DMSO and subjected to the migration assay. Graph shows mean percentages of the migrated cells in treated vs. untreated samples, counted from two independent experiments. **(B)** Representative photomicrographs showing HEMA 3 staining of MILL and PHI cells migrated and adhered to the lower surface of insert membrane (original magnification 100x).
