

Supplemental Figure 1. Aging is associated with increased frequency of CD4 T cells expressing the chemokine receptors CCR6 and CCR4.

CD4+ T cells were gated for CD4+CD62L– Teff or for CD4+CD62L+ non-Teff subsets, and then the frequency of CCR6 (a) and CCR4 (b) chemokine receptors in the different subsets was analyzed. Data are shown in Fig. 1 as means \pm SEM of 30 mice per group, pooled from five independent experiments. *p*-values were calculated by Student's *t*-test; **p* < 0.05; ***p* < 0.01; ****p* < 0.001
