

# Significant Decrease in Pertactin–Deficient *Bordetella pertussis* Isolates, Japan

## Technical Appendix

Technical Appendix Table 1. Characteristics of *Bordetella pertussis* isolates, Japan, 2005–2016\*

Isolate	Isolation year	Patient age	Vaccine status	Origin (district)	Pertactin production	<i>prn</i> gene	<i>prn</i> allele	MLVA type
BP285	2005	2 mo	0	Kanto	–	ΔSS	1	186
BP291	2005	1 y	3	Chubu	–	ΔSS	1	186
BP292	2005	1 mo	0	Chubu	–	ΔSS	1	226
BP293	2005	4 mo	1	Chubu	–	ΔSS	1	186
BP299	2005	5 mo	0	Kyusyu	–	ΔSS	1	186

\* negative; +, positive; ND, not determined; MLVA, multilocus variable number tandem repeat analysis.

Technical Appendix Table 2. Primers used in this study of *Bordetella pertussis* isolates, Japan, 2008–2016\*

Designation	Primer name	Sequence (5' to 3')
Conventional PCR	SS-defect-F5	CTCTGTCACGCATTGACAAC
	SS-outerR	CTCGGCCGCGGGATTTCTA
	IS481-combine-F	GCAGACGCCACTAGGTGTGA
	IS481-combine-R	AAAGGTGCCGCGCTGCCTA
qRT PCR	qprn-F	ATCGTCAAGACCAGGTGAGCG
	qprn-R	CTGACGGCCGCTTACCTTGA
	qrecA-F	CCAATGTGGTCGACAAGTCC
	qrecA-R	ATGCCATTTCCTTGCTC

\*qRT-PCR, quantitative reverse transcription PCR.

Technical Appendix Figure. Lack of *prn* transcript expression in pertactin-deficient *Bordetella pertussis* isolate BP394. The pertactin-deficient isolate was cultured for 3 days on Bordet-Gengou agar. Total RNA was isolated by using the RNeasy Mini Kit (QIAGEN, Hilden, Germany) and treated with RNase-Free DNase (QIAGEN) to degrade contaminating DNA. Total RNA (0.1 µg) was reverse-transcribed into cDNA by using the PrimeScript RT Master Mix with random hexamers (TaKaRa Bio, Inc., Shiga, Japan). Relative levels of *prn* and *recA* transcripts were determined using SYBR Premix Ex TaqII (TaKaRa Bio) with the ABI PRISM 7500 Fast Real-Time PCR System (Applied Biosystems, Waltham, MA, USA). Quantitative reverse transcription-PCR (qRT-PCR) conditions were 10 s at 95°C, followed by 40 cycles of 95°C for 3 s, and 60°C for 30 s. Primer sets qprn-F/qprn-R and qrecA-F/qrecA-R were used for *prn* and *recA* amplification, respectively (Technical Appendix Table 2). The relative *prn* transcript level was calculated using the  $\Delta\Delta Ct$  method and was normalized to that of *recA*. The *recA* transcript was used as an internal control for each sample. Data are presented as -fold- changes in expression compared with

those observed in *B. pertussis* strain Tohama. The mean  $\pm$  SDs of results obtained from 3 separate experiments are shown.
