

Table S2 Gene Ontology analysis of the astrocyte endfeet transcriptome. The “cellular component” and “biological process” GO pathways significantly depleted upon BL digestion are grouped by cellular compartment (cytoplasm, cytoskeleton, extracellular and membrane) and functions (development, extracellular matrix, metabolism, microtubule, signalisation and transport/homeostasis). Number of entities, the number of transcripts referenced in the pathway; number of measured entities, the number of transcripts found in the transcriptome; Median FC, median change of expression upon BL digestion. A negative score indicates a depletion upon digestion, thus an enrichment of the pathway in the endfeet.
