Abbreviations as in Figure 1. Identical superscripted letters indicate no significant difference between values in the four treatment conditions for that compound ($p < 0.05$; Tukey's HSD). No superscripted letters among all conditions within a row indicate that the ANOVA for all samples was not significant ($p < 0.05$).

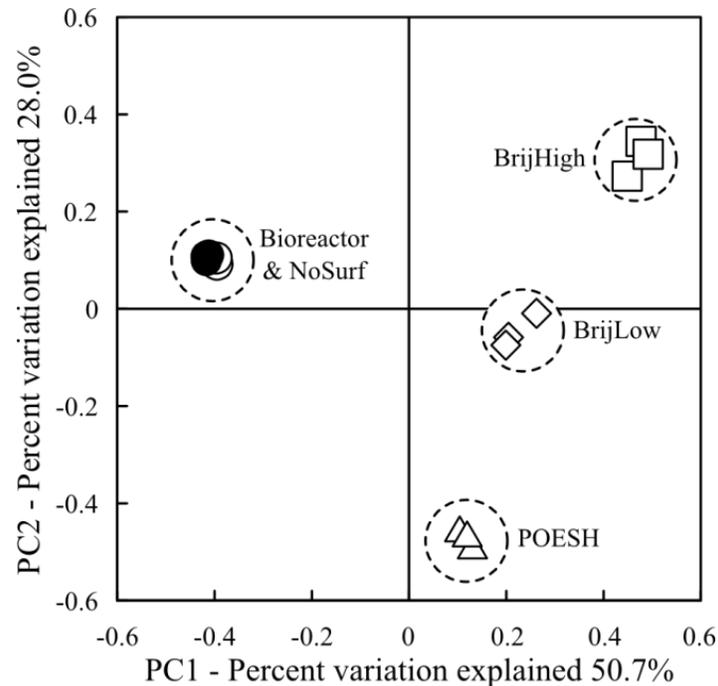

Figure S1. PCoA plot based on triplicate 16S rRNA gene amplicon libraries for each condition. Symbols for some Bioreactor and NoSurf replicates are obscured by other libraries within those conditions.

Table S2. Classifier phylogeny and relative abundance of all OTUs with an average representation of at least 0.1% in at least one condition.

^a Average relative abundance with standard deviation shown in parentheses (n=3 libraries per condition). Values $\geq 1.0\%$ are bolded. OTUs that did not comprise $\geq 0.1\%$ of at least one treatment are not shown.

Table S3. Partial 16S rRNA gene representative sequences of all OTUs presented in Table 2.
