

Supplementary Figures

Figure S1. Effects of tubastatin A on the expression of IL-17 in EL4 cells. EL4 cells were treated with 0, 2, or 4 μM tubastatin A for 4 hours and incubated with PMA and ionomycin for 0, 12, or 18 hours. IL-17A (A) and IL-17F (B) mRNA levels were then analyzed by qRT-PCR. Data are representative of three independent experiments. Error bars indicate mean \pm SEM. * $p < 0.05$; *** $p < 0.001$; ns, not significant.

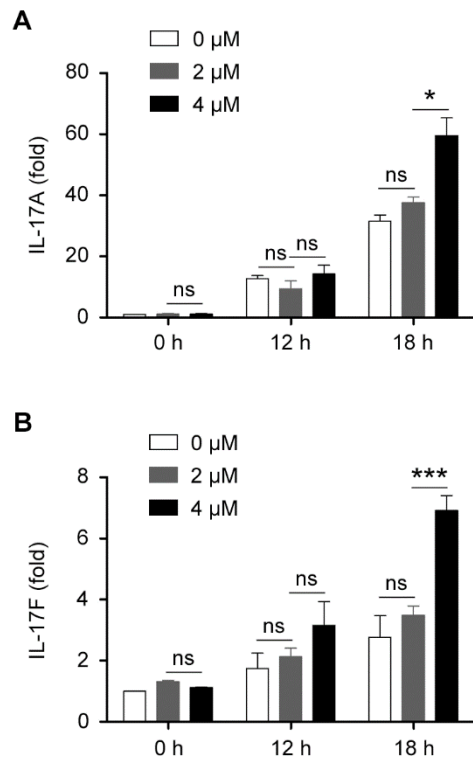

Figure S2. Effects of tubastatin A on the expression of IL-17-associated transcription factors in EL4 cells. EL4 cells were treated with DMSO or 2 μ M tubastatin A (TubA) for 4 hours and incubated with PMA and ionomycin for 0, 12, or 18 hours. Hes1 (A), SOX4 (B), and SOX13 (C) mRNA levels were then analyzed by qRT-PCR. Error bars indicate mean \pm SEM. ns, not significant.
