

S4 Table: Logistic regression for respondents choosing to sustain life at all costs in the final scenario of end stage disease (n=1854)

		Odds Ratio	95% Confidence Interval		<i>p-value</i>
			Lower	Upper	
Country					0.910
	GB	Reference			
	US	1.25	0.97	1.61	
Gender					0.330
	Male	Reference			
	Female	1.13	0.88	1.45	
University education					0.769
	Yes	Reference			
	No	0.96	0.73	1.27	
Ethnicity (GB) / Race					<0.001
	“White”	Reference			
	“Black”	2.57	1.73	3.82	
	All other groups	1.30	0.91	1.84	
Experience					0.662
	No	Reference			
	Yes	1.06	0.82	1.37	
Living with children					<0.01
	No	Reference			
	Yes	1.49	1.14	1.96	
Age					<0.001
	Constant	0.78	0.72	0.85	
		0.05			

Note: Overall model evaluation: Chi square = 99.498 , p <0.001
