

S6 Table: Logistic regression for respondents choosing “measures to help me die peacefully” in the final scenario of end stage disease (n=1854)

		Odds Ratio	95% Confidence Interval		<i>p-value</i>
			Lower	Upper	
Country					0.635
	GB	Reference			
	US	1.05	0.86	1.28	
Gender					0.832
	Male	Reference			
	Female	0.98	0.81	1.19	
University education					0.652
	Yes	Reference			
	No	1.05	0.85	1.31	
Ethnicity (GB) / Race					<0.001
	“White”	Reference			
	“Black”	0.26	0.16	0.43	
	All other groups	0.61	0.44	0.84	
Experience					<0.01
	No	Reference			
	Yes	1.40	1.15	1.71	
Living with children					<0.01
	No	Reference			
	Yes	0.72	0.57	0.92	
Age		1.11	1.05	1.18	<0.001
	Constant	0.39			

Note: Overall model evaluation: Chi square =103.52 , p <0.001
