

**S2 Table. The top 20 hubs of the amyloid interactome.**

<b>Protein names*</b>	<b>Degree</b>
<b>Amyloid beta A4 protein</b>	<b>84</b>
<b>Apolipoprotein A-I</b>	<b>61</b>
<b>Major prion protein</b>	<b>57</b>
Transcription factor AP-1	53
<b>Transthyretin</b>	<b>47</b>
Epidermal growth factor receptor	40
14-3-3 protein zeta/delta	40
Growth factor receptor-bound protein 2	35
Gamma-aminobutyric acid receptor-associated protein-like 1	33
Serum albumin	33
Gamma-aminobutyric acid receptor-associated protein-like 2	33
NF-kappa-B essential modulator	29
Fibronectin	26
Vimentin	25
Heat shock cognate 71 kDa protein	24
Beta-arrestin-1	23
Myosin-9	23
Hsp90 co-chaperone Cdc37	23
<b>Beta-2-microglobulin</b>	<b>23</b>
Actin, cytoplasmic 1	22

Amyloidogenic proteins are highlighted in bold.

\*Protein nomenclature follows the most cited abbreviations in literature.
