

Supplementary Table 3. Forward stepwise multivariate analysis for risk factors for spreader of MERS-CoV, after censoring patients who had developed their symptom later than June 7

| Variables | Non-spreader (n = 118) | Spreader (n = 12) | aOR (95% CI) | P value |
|--|------------------------|-------------------|-------------------|---------|
| Dyspnea, No. (%) | 27 (23.3) | 8 (66.7) | 4.38 (1.13–16.90) | 0.032 |
| Nonisolated in-hospital days, median (IQR) | 1.0 (0.0–2.3) | 5.0 (2.0–8.5) | 1.31 (1.07–1.60) | 0.009 |

MERS-CoV = Middle East Respiratory Syndrome Coronavirus, aOR = adjusted odds ratio, CI = confidence interval, IQR = interquartile range.
