For each exposure group, values represent mean values \pm SD (n \geq 14 litters; Range 14-20) based on estimates of consumption of chow per animal consuming chow with a caloric density 3.63 kcal/per g. ^a Significantly different from Control (p < 0.05). Est. Dose - Estimated Dose; Exp. Dose - Expected dose based on consumption of 15% of body weight (mg/kg/day).
