

# Supplementary data

#### Table 1. Summary of the fast-track protocol that was used

- Preoperative education
- Low-dose spinal anesthesia
- Standardized protocol for pain medication
- Opioid medication only on request (rescue medication)
- No drains
- · No standard urine catheters
- Start rehabilitation and mobilization on day of surgery
- · Checking of fulfillment of discharge criteria twice a day
- Optimization of the aftercare if needed (home care, hotel with care facilities)

Table 2. English translation of general questions

#### Pain

• Give an average pain score between 0 and 10, in which 0 is no pain and 10 is the worst possible pain.

#### Medication

- What medication and which doses did you use today?
- How did you sleep last night?

#### Physiotherapy

- Did you have physiotherapy this week?
- What kind of treatment did you receive?

#### Wound

- Did the wound leak?
- Did you change the bandage?
- Did you experience problems/anxiety regarding changing of the bandage?

#### Home care service

- Did you use the home care service this week?
- Thrombosis injections
- Did you experience problems with the thrombosis prophylaxis injection?

## Complications

• Did you contact a doctor this week for your operated hip?

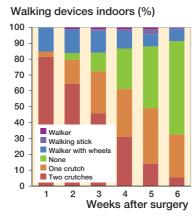

Figure 3. The use of walking devices indoors.

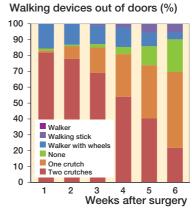

Figure 4. The use of walking devices out of doors.

# Mean ICOAP total score

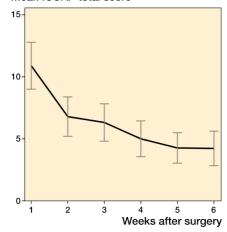

Figure 2. Mean ICOAP total score, week 1 to week 6 after discharge. Error bars show 95% CI.

# Mean OHS score

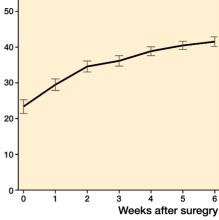

Figure 5. Mean OHS score preoperatively to week 6 after discharge. Error bars show 95% CI.

### Mean HOOS-PS score

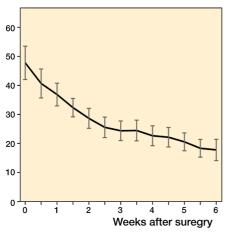

Figure 6. Mean HOOS-PS score preoperatively to week 6 after discharge, scored twice weekly. Error bars show 95% Cl.

# Mean EQ-5D score

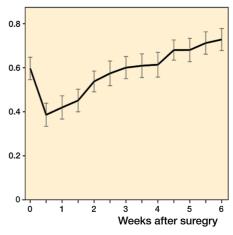

Figure 7. Mean EQ-5D score preoperatively to week 6 after discharge, scored twice weekly. Error bars show 95% CI.
