

## Supplementary appendix

This appendix formed part of the original submission and has been peer reviewed.  
We post it as supplied by the authors.

Supplement to: Shiels MS, Chernyavskiy P, Anderson WF, et al. Trends in premature mortality in the USA by sex, race, and ethnicity from 1999 to 2014: an analysis of death certificate data. *Lancet* 2017; published online Jan 25. [http://dx.doi.org/10.1016/S0140-6736\(17\)30187-3](http://dx.doi.org/10.1016/S0140-6736(17)30187-3).

## **Supplemental Appendix Table of Contents**

**Page 2: Supplemental Methods**

**Page 4: Supplemental Table 1. Cause of death definitions based on ICD-10 codes.**

**Page 5: Supplemental Table 2: Estimated annual percentage change (APC) in all-cause mortality by age and sex in Canada, and England and Wales and by age, sex and race and ethnicity in the USA, 1999-2014**

**Page 10: Supplemental Table 3. Age-adjusted all-cause mortality rates in U.S. men and women by race/ethnicity, age group and calendar period, 1999-2014.**

**Page 13: Supplemental Table 4: Age-standardized mortality rates by race/ethnicity, sex, age group, calendar period and cause of death.**

**Page 29: Supplemental Table 5: ICD-10 codes for sub-categories of accidental deaths.**

**Page 31: Supplemental Figure 1. Birth cohort relative risks of mortality among 25-64 year-olds by sex in A) Canada, England/Wales, and the United States, and B) the United States by race and ethnicity.**

**Page 33: Supplemental Figure 2. Age-adjusted mortality rates for deaths due to accidental poisonings by sex and race/ethnicity among 25-49 year-olds during 2011-2014.**

## Supplemental Methods

The traditional age-period-cohort (APC) model represents expected mortality rates as a log-linear model with additive age, period, and cohort effects. Because cohort is collinear with age and period, APC models can be written in either the age-period cross-sectional form or the age-cohort longitudinal form.<sup>1</sup> In this paper, we use the latter specification, but the fitted rates are identical. Omitting the offset, the linear predictor can be expressed in scalar notation as:

$$\log(\mu_{apc}) = \beta_0 + \beta_a(a - \bar{a}) + \beta_c(c - \bar{c}) + \tilde{\alpha}_a + \tilde{\pi}_p + \tilde{\gamma}_c \quad (1)$$

In equation (1), the intercept  $\beta_0$  represents the log-rate centered at mean age  $\bar{a}$  and mean birth cohort  $\bar{c}$ ,  $(a - \bar{a})$  and  $(c - \bar{c})$  are the centered effects of age and birth cohort,  $\beta_a$  and  $\beta_c$  are the corresponding linear trend parameters, and  $\tilde{\alpha}_a$ ,  $\tilde{\pi}_p$ , and  $\tilde{\gamma}_c$  are the categorical age, period, and cohort deviations from linear trends. Deviation parameters must be constrained for identifiability, such that:  $\sum_a \tilde{\alpha}_a = \sum_p \tilde{\pi}_p = \sum_c \tilde{\gamma}_c = 0$  and  $\sum_a \tilde{\alpha}_a(a - \bar{a}) = \sum_p \tilde{\pi}_p(p - \bar{p}) = \sum_c \tilde{\gamma}_c(c - \bar{c}) = 0$ .<sup>2</sup> Note that this constraint does not limit the magnitude of trends *a priori*, but instead reflects the uncertainty in modeling the effects of age separately from period/cohort, and vice versa.<sup>1</sup> Parameters are estimated by numerically maximizing the Poisson log-likelihood with respect to  $\beta_0$ ,  $\beta_a$ ,  $\beta_c$ ,  $\tilde{\alpha}_a$ ,  $\tilde{\pi}_p$ , and  $\tilde{\gamma}_c$ .

In practice,  $\beta_a$  is called the ‘Longitudinal Age Trend’ (LAT) and  $\beta_c$  the ‘Net Drift’.<sup>3</sup> Age, period, and cohort deviations are combined with trend parameters to construct APC estimable functions, for example: cohort relative risk (RR), and age-specific annual percent change, called the “Local Drifts”.<sup>4</sup> Rosenberg and Anderson provide a comprehensive overview of such estimable functions and demonstrate their utility in studies of incidence rates.<sup>3</sup>

APC models are a subset of General Linear Models (GLM), thus the uncertainty in parameter estimates can be computed using standard methods. More specifically, the variance-covariance matrix for all model parameters is expressed as  $\sigma^2 (X'VX)^{-1}$ , where  $X$  is the APC design matrix,  $V$  is a diagonal matrix with the fitted means  $\hat{\mu}_{apc}$  on the main diagonal, and  $\sigma^2$  is assumed to be 1 following standard Poisson GLM specifications. For computational details of APC parameter standard errors, including cohort RR and Local Drifts, please see descriptions by Rosenberg et al.<sup>4</sup> and the R code for the APC analysis web-tool (<https://analysistools.nci.nih.gov/apc/>).

Underlying mortality data provided by NCHS ([www.cdc.gov/nchs](http://www.cdc.gov/nchs)).

MR Mortality rate. Rates are per 100,000 & age-adjusted to the 2000 US Std Population.

n.e. Not estimable.

^ Statistic not displayed due to fewer than 10 cases.

LL Lower limit of 95% confidence interval.

UL Upper limit of 95% confidence interval.

Rate ratios are age-adjusted and compare rates in 2011-2014 to 1999-2002

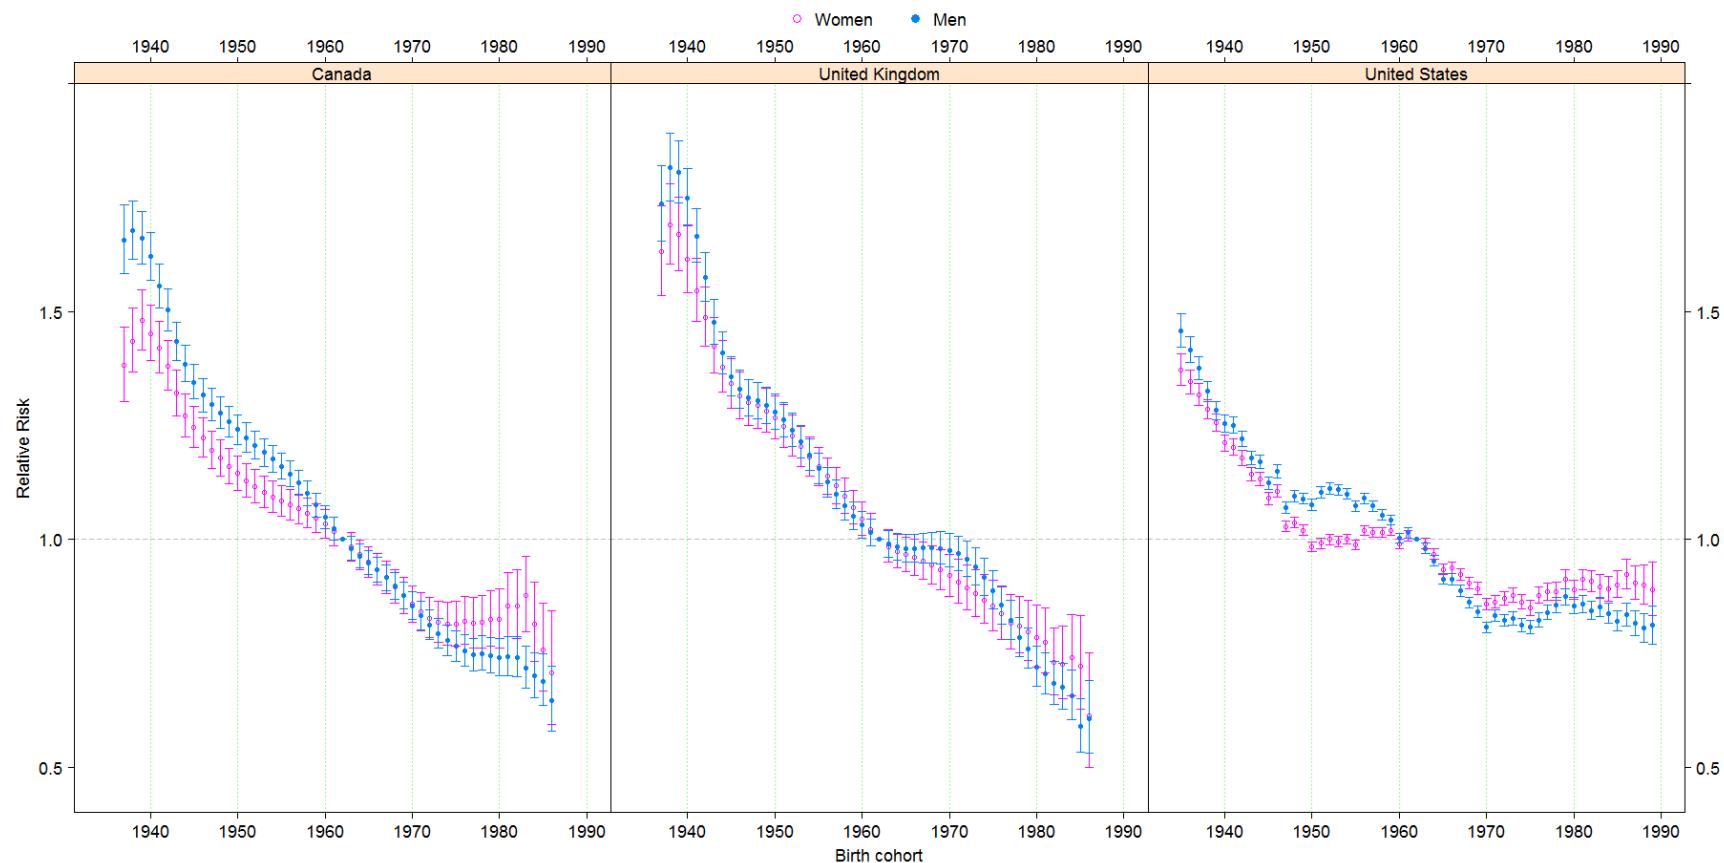

Table S5. ICD-10 codes for sub-categories of accidental deaths.

All accidents:	V01-X59, Y85-Y86
Motor vehicle accidents	V02-V04, V09.0, V09.2, V12-V14, V19.0-V19.2, V19.4-V19.6, V20-V79, V80.3-V80.5, V81.0-V81.1, V82.0-V82.1, V83-V86, V87.0-V87.8, V88.0-V88.8, V89.0, V89.2
Other transport accidents	V01, V05 V06, V09.1, V09.3 V09.9, V10 V11, V15 V18, V19.3, V19.8 V19.9, V80.0 V80.2, V80.6 V80.9, V81.2 V81.9, V82.2 V82.9, V87.9, V88.9, V89.1, V89.3, V89.9, V90 V99, Y85
Accidental poisoning and exposure to noxious substances	X40 X49
Other non-transport accidents	W00 X39, X50-X59, Y86

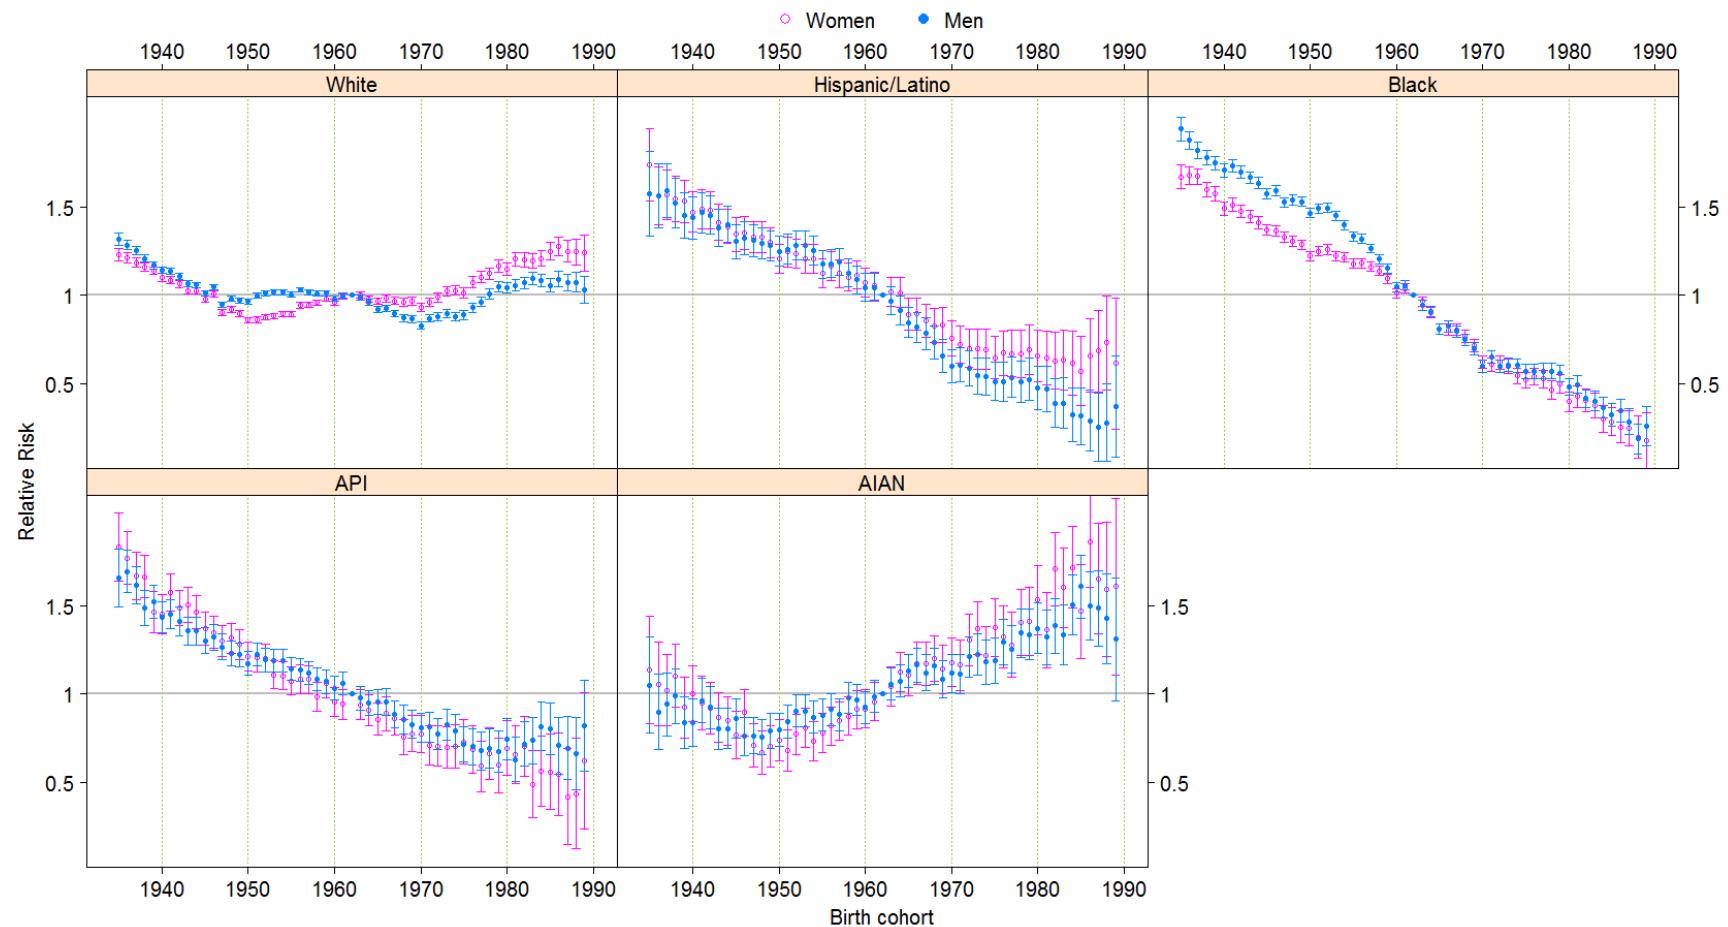

Supplemental Figure 1 legend. Birth cohort relative risks of mortality among 25-64 year-olds by sex in A) Canada, England/Wales, and the United States, and B) the United States by race and ethnicity. Points represent relative risks and lines represent confidence intervals. Relative risks represent mortality in any given birth year relative to 1962 (the mid-point of the birth cohorts included in the study).

**Figure S1.** Birth cohort relative risks of mortality among 25-64 year-olds by sex in A) Canada, England/Wales, and the United States, and B) the United States by race and ethnicity.

A.

B.

**Figure S2. Age-adjusted mortality rates for deaths due to accidental poisonings by sex and race/ethnicity among 25-49 year-olds during 2011-2014.**
