

Figure S1

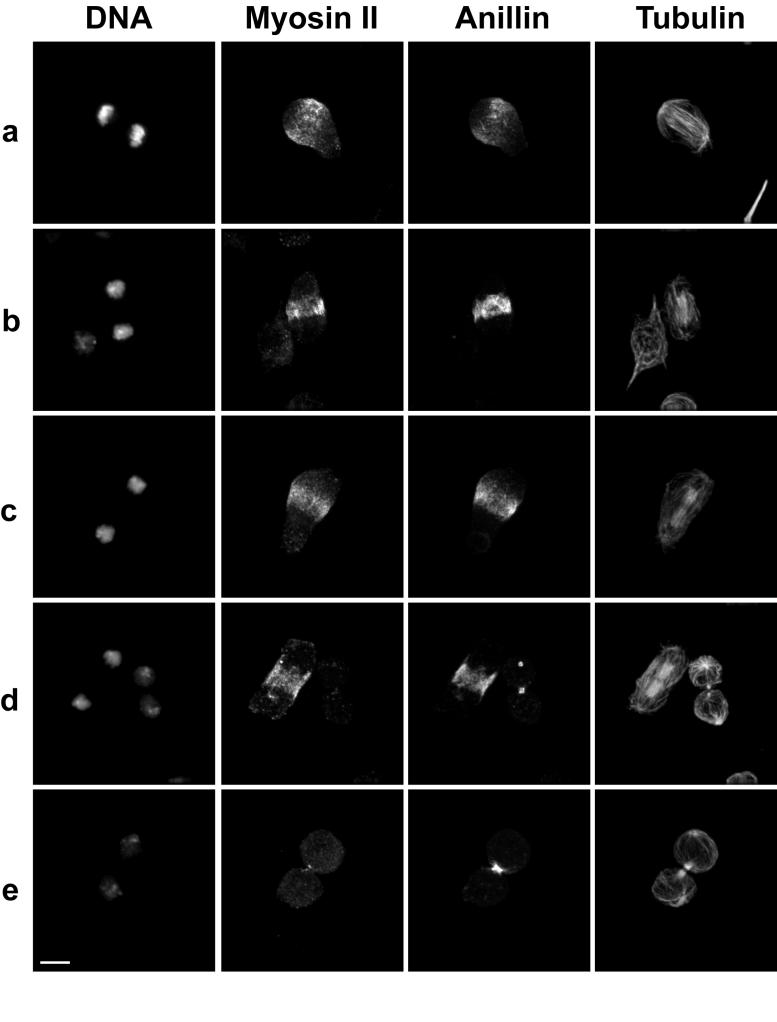

Figure S2

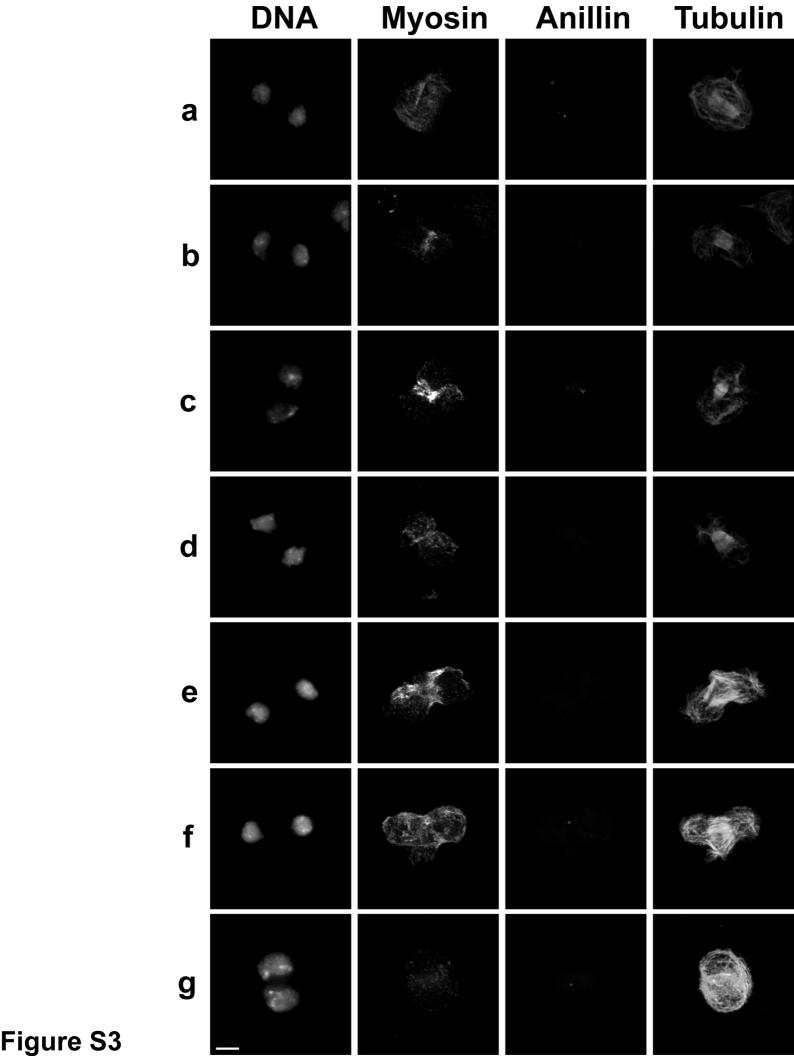

Figure S1 – Myosin binding to Anillin and control GST beads. Coomassie staining of eluates from anillin or GST columns after phosphorylation as described in Figure 4.

Figure S2 – *Drosophila* Kc167 cells fixed and stained for DNA, myosin II, anillin and tubulin during different stages of cytokinesis. Scale bar represents 5 μm.

Figure S3 – Drosophila Kc167 cells treated with dsRNA for anillin then fixed and stained for DNA, myosin II, anillin and tubulin during different stages of cytokinesis. Scale bar represents 5 μm.
