^a These samples were excluded from the subsequent sequence analyses due to the subsampling cutoff of 8,500 sequences.

^b Plates supplemented with 0.5 µM AHLs

^c Plates supplemented with 50 µM AHLs

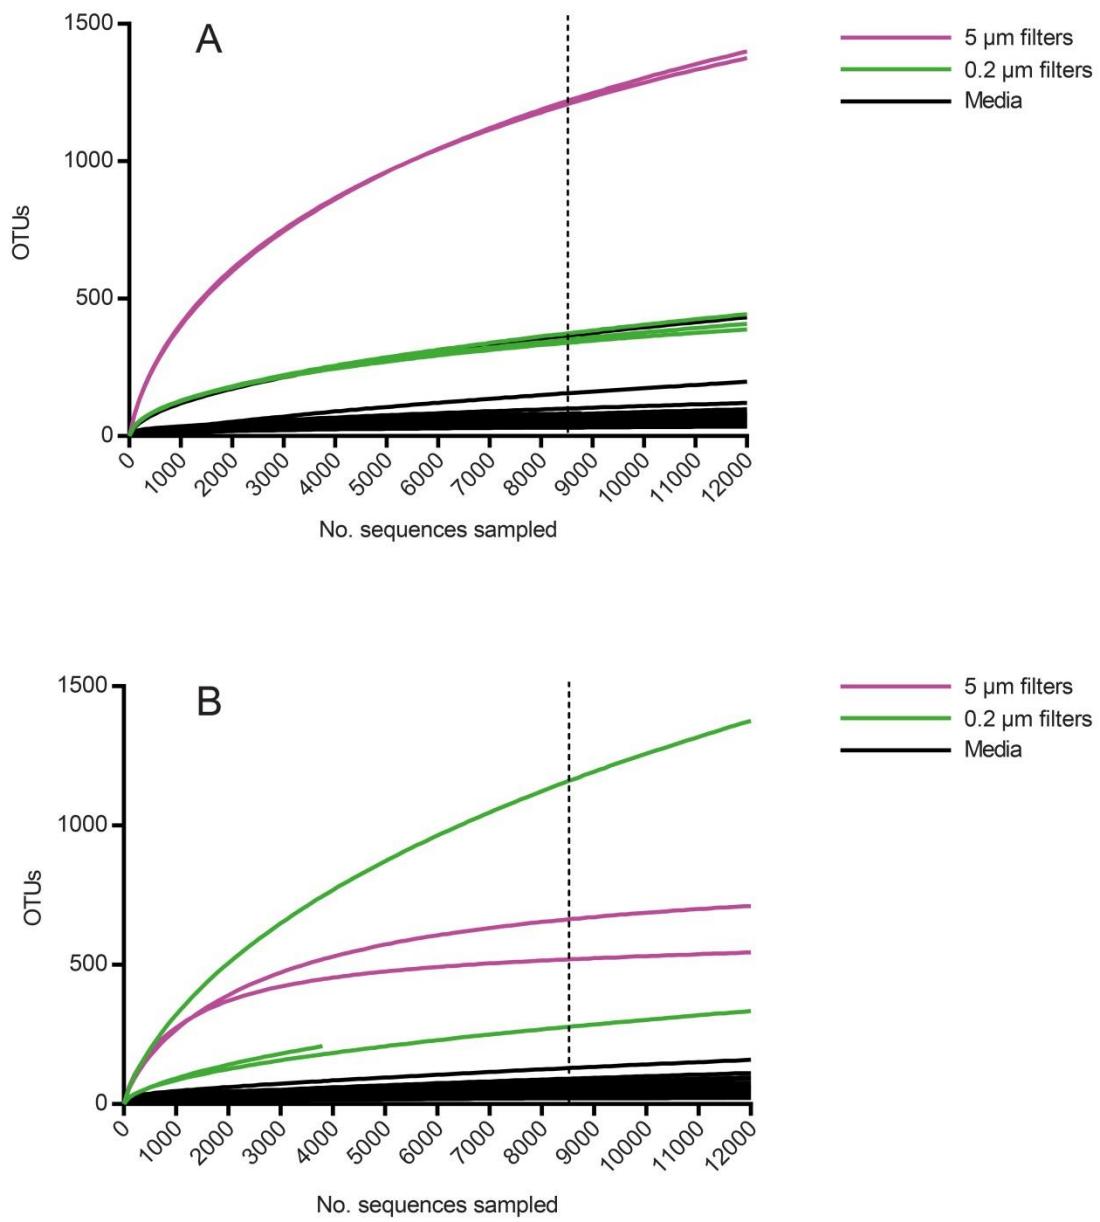

FIGURE S1 Rarefaction curves from all sequenced samples from sampling 1 (A) and sampling 2 (B). Sequences were clustered at a 97 % sequence similarity. In the subsequent diversity analyses 8,500 sequences from each sample were analyzed as indicated by the dashed line.

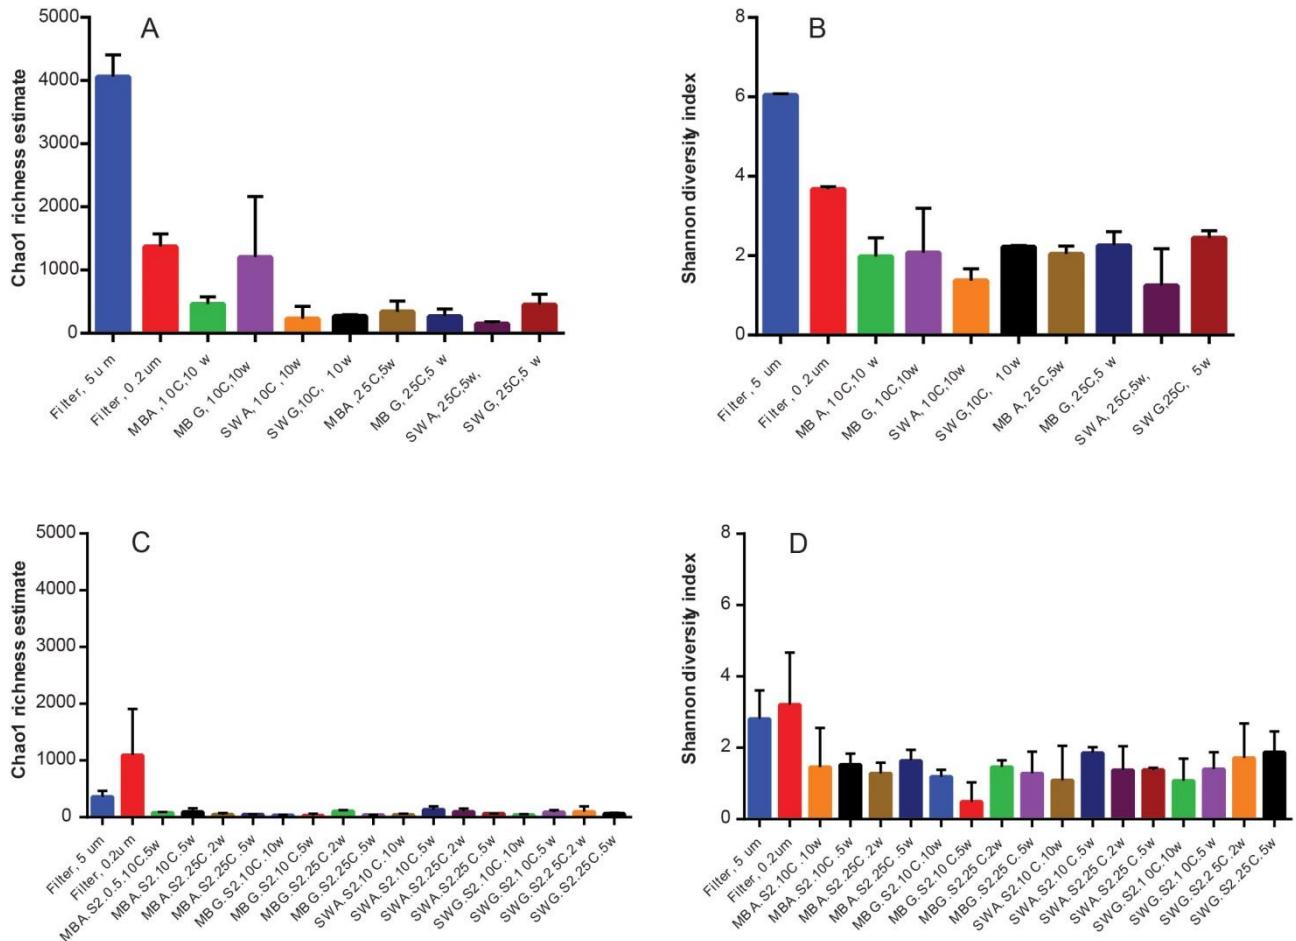

FIGURE S2 Measures of alpha-diversity in the two data sets. The Chao1 richness estimates for sampling 1 and 2 are shown in panels A and C, respectively, and the Shannon diversity index values are shown in panels B and D for sampling 1 and 2, respectively.

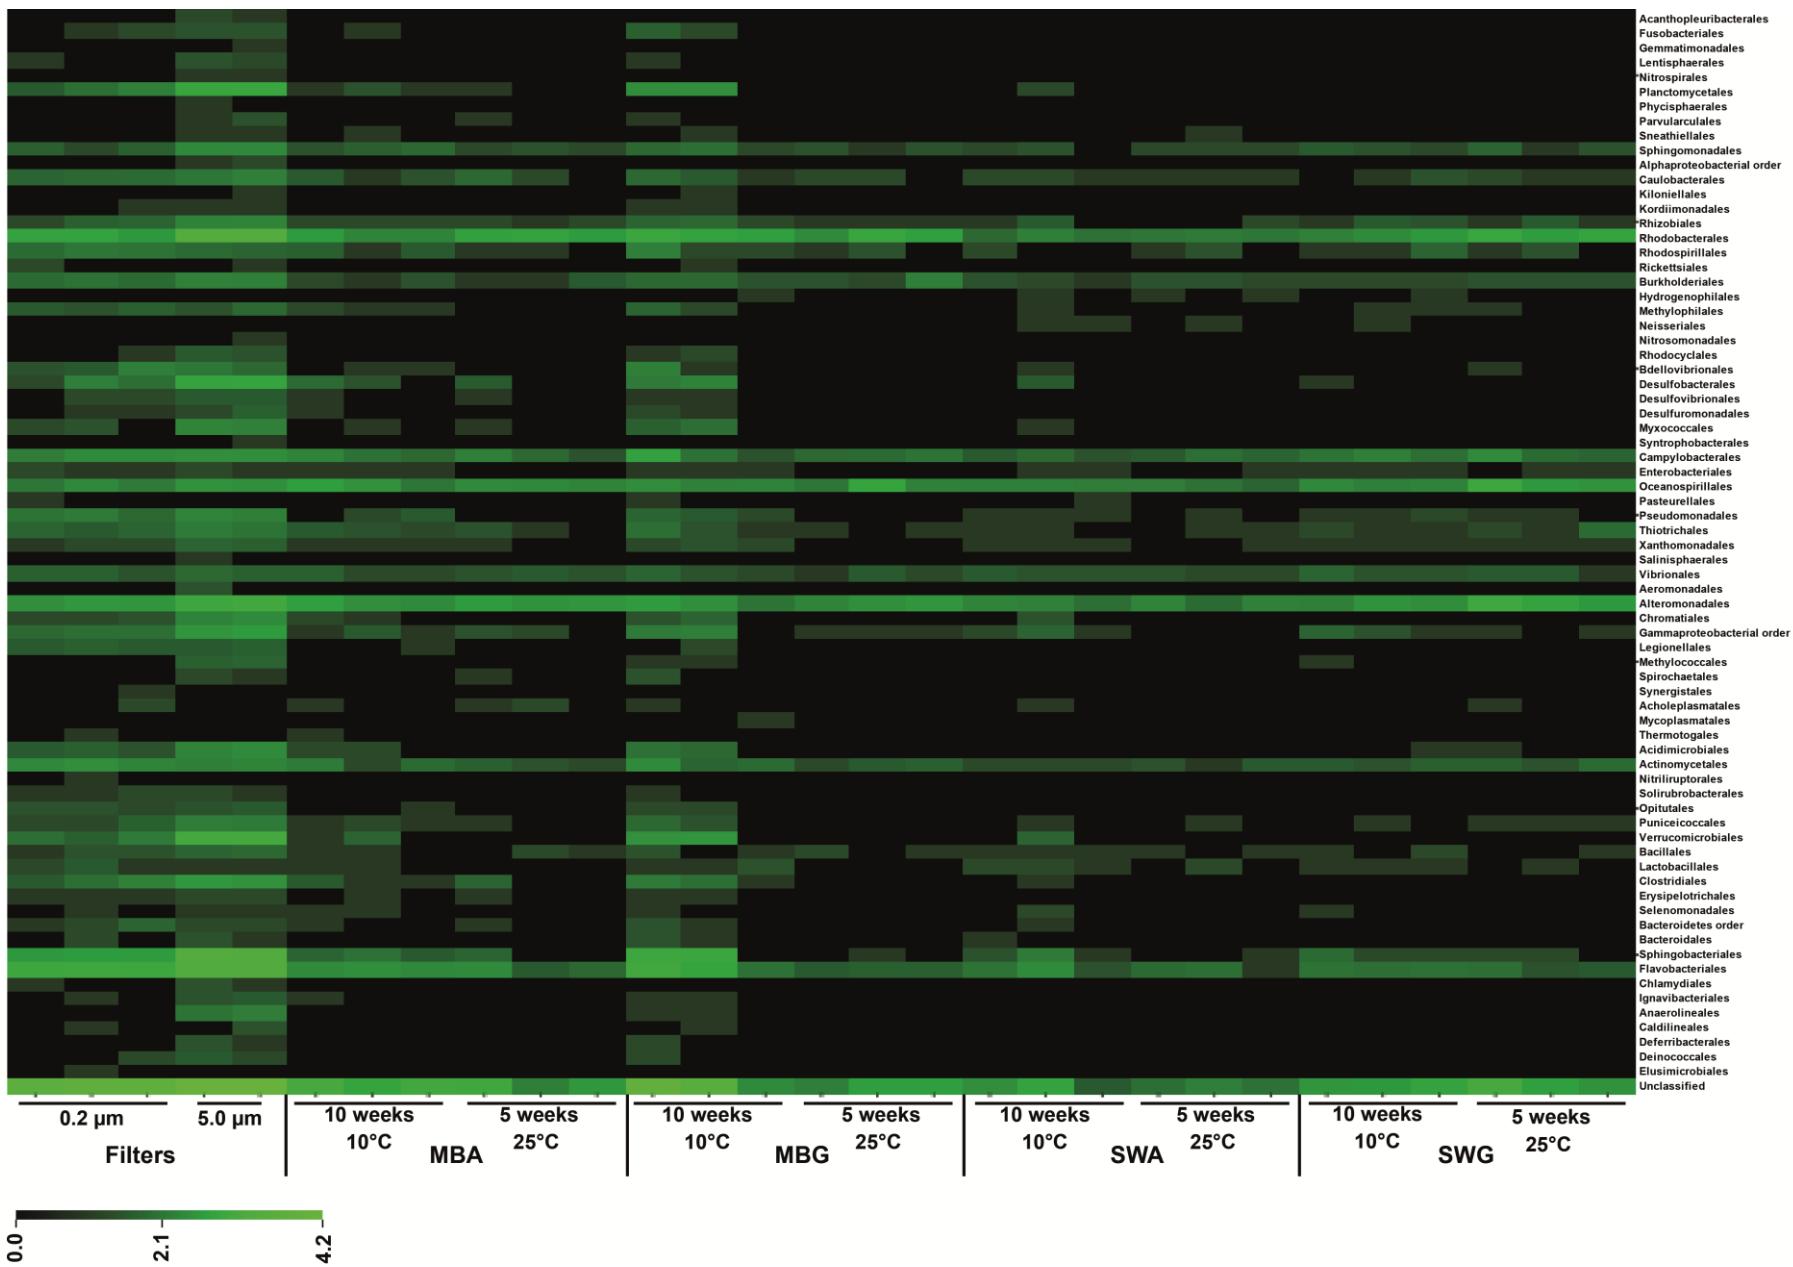

FIGURE S3 Heatmap displaying the relative OTU richness across samples in S1. The scale bar represents $\log_{10} + 1$ transformed OTU richness.

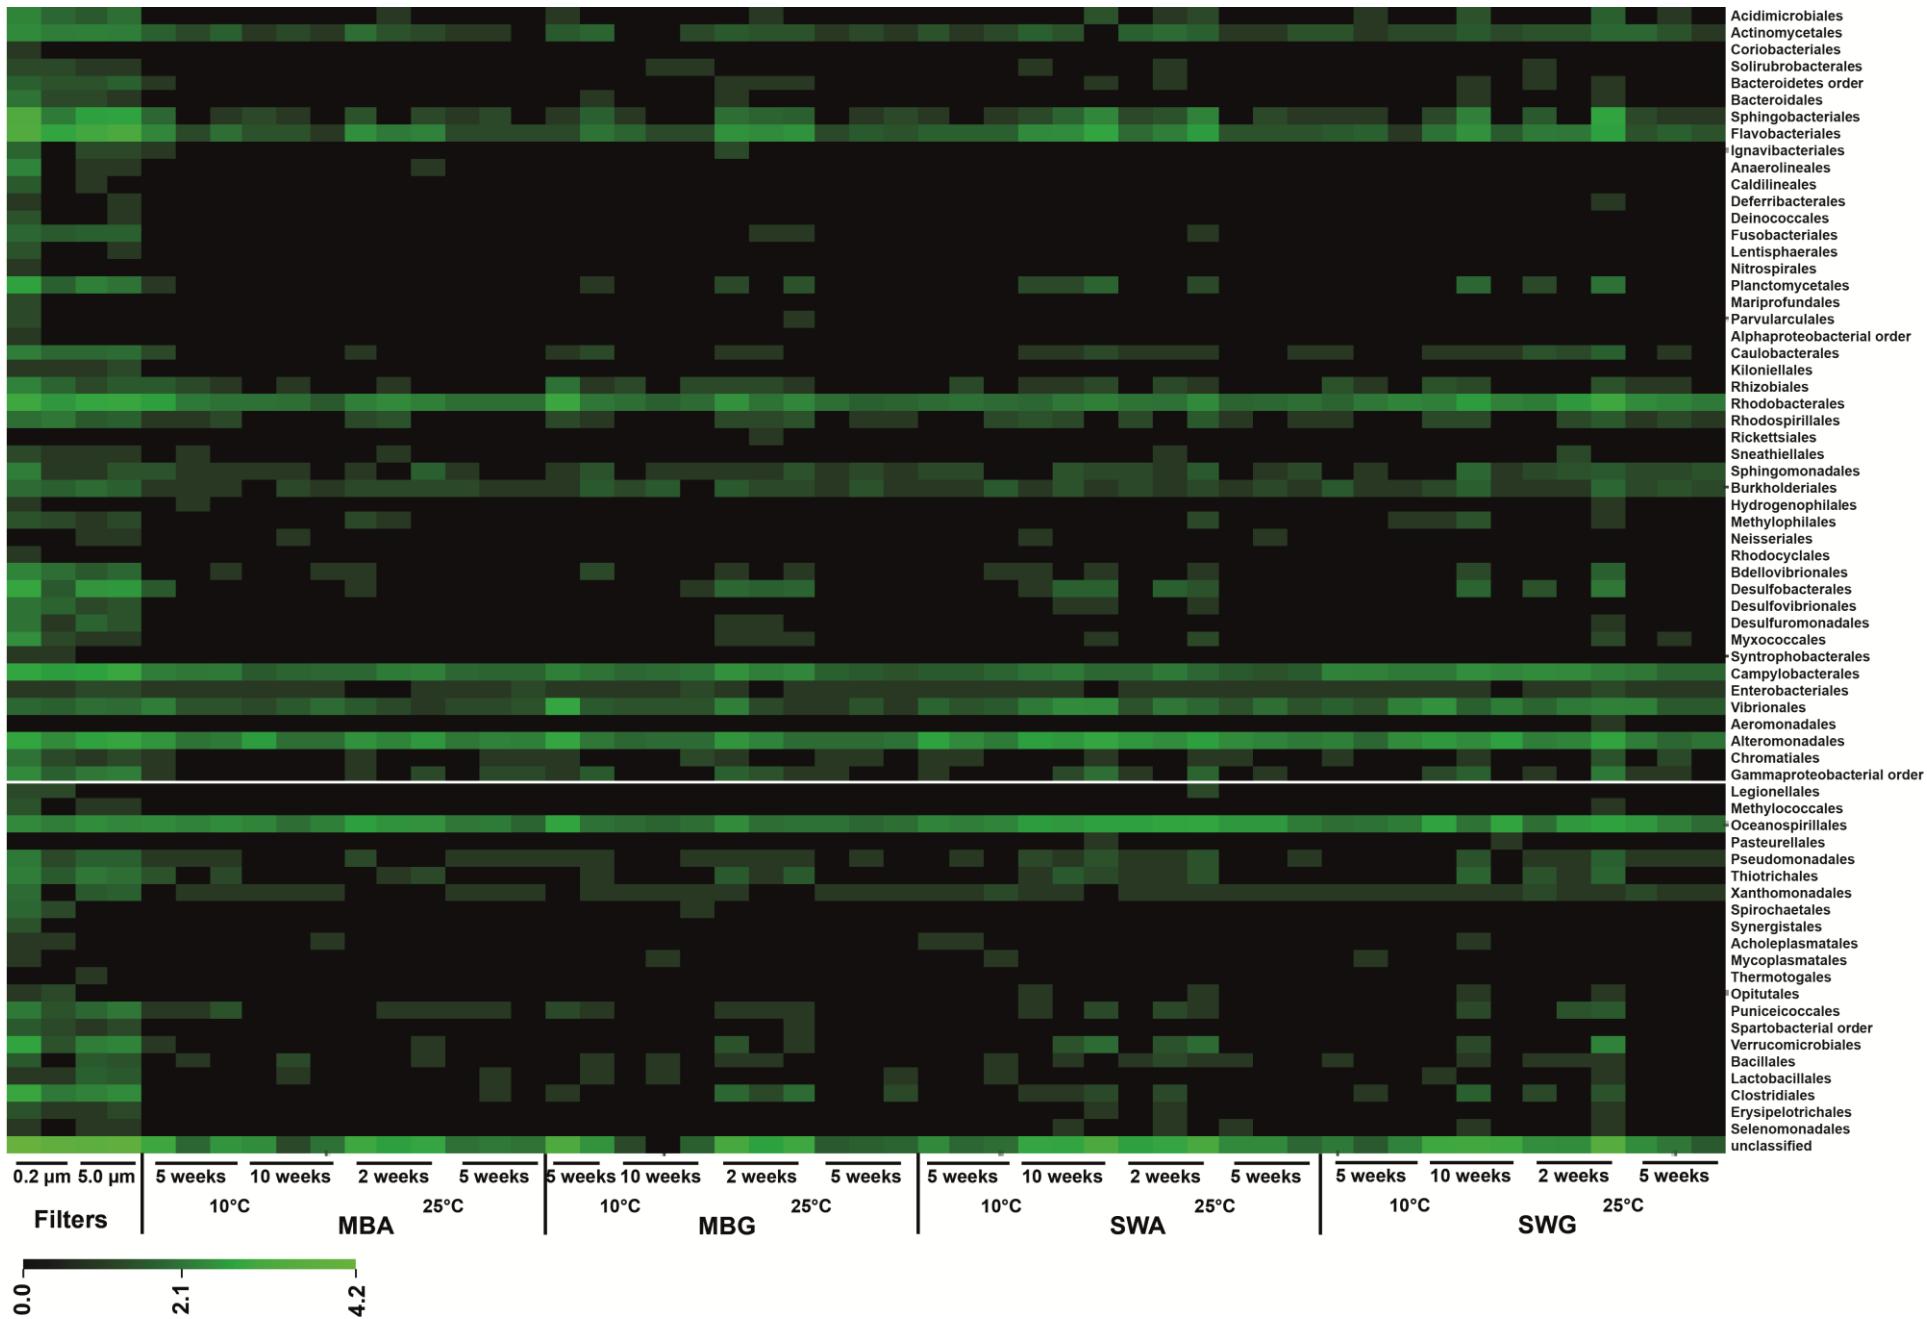

FIGURE S4 Heatmap displaying the relative OTU richness across samples in S2. The scale bar represents log₁₀+1 transformed OTU richness.

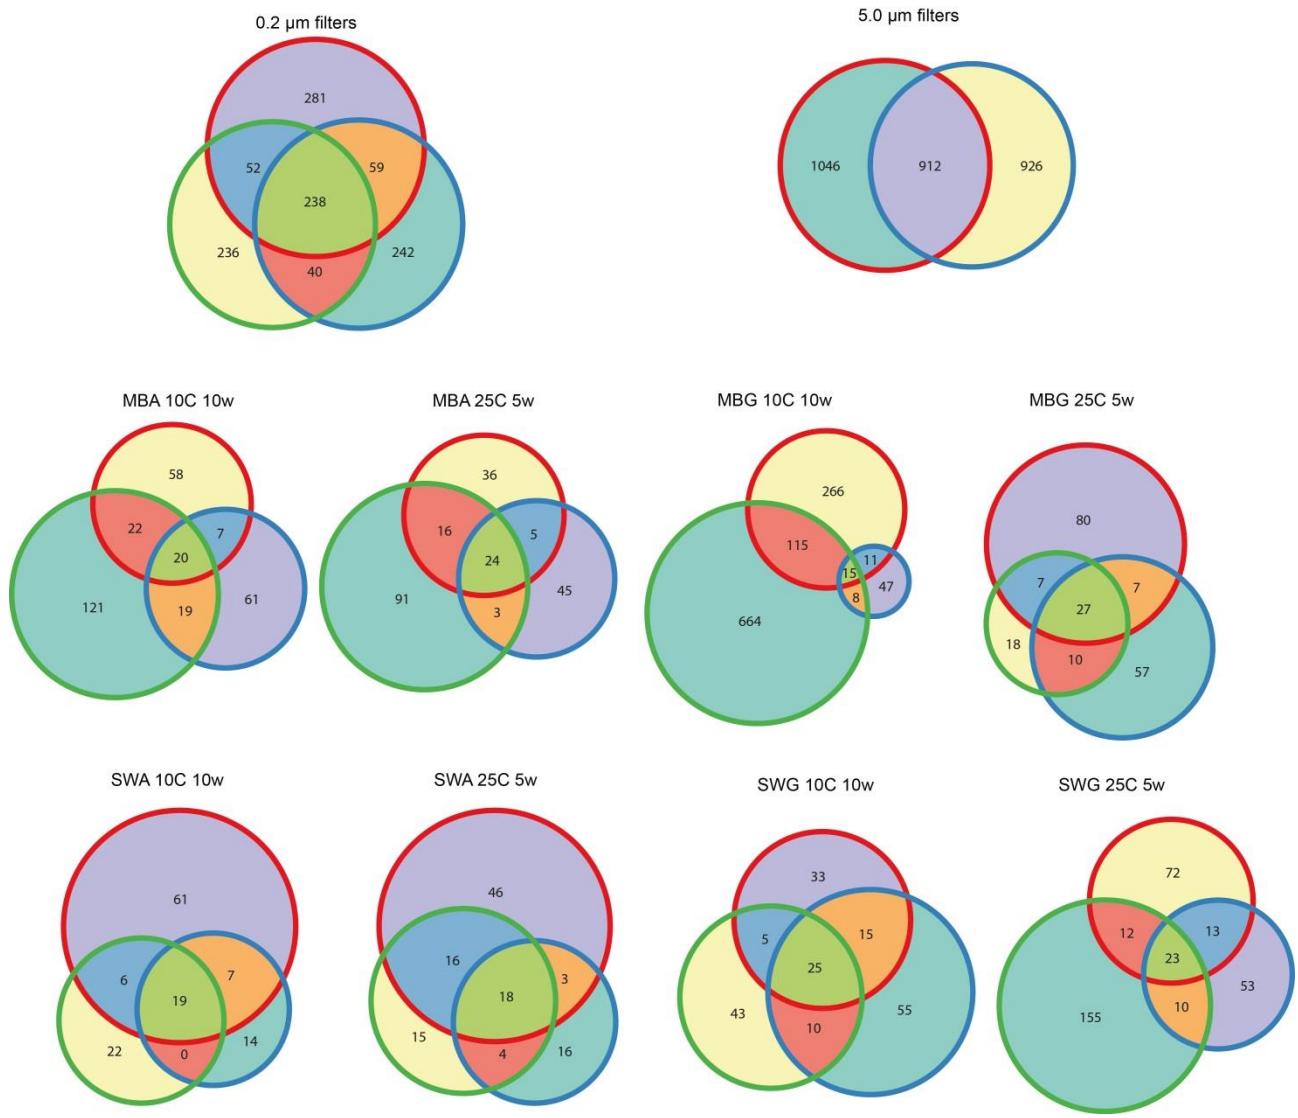

FIGURE S5 Weighted Venn diagrams showing the number of OTUs shared between replicates within each treatment during S1. Diagrams are only weighted within treatments.

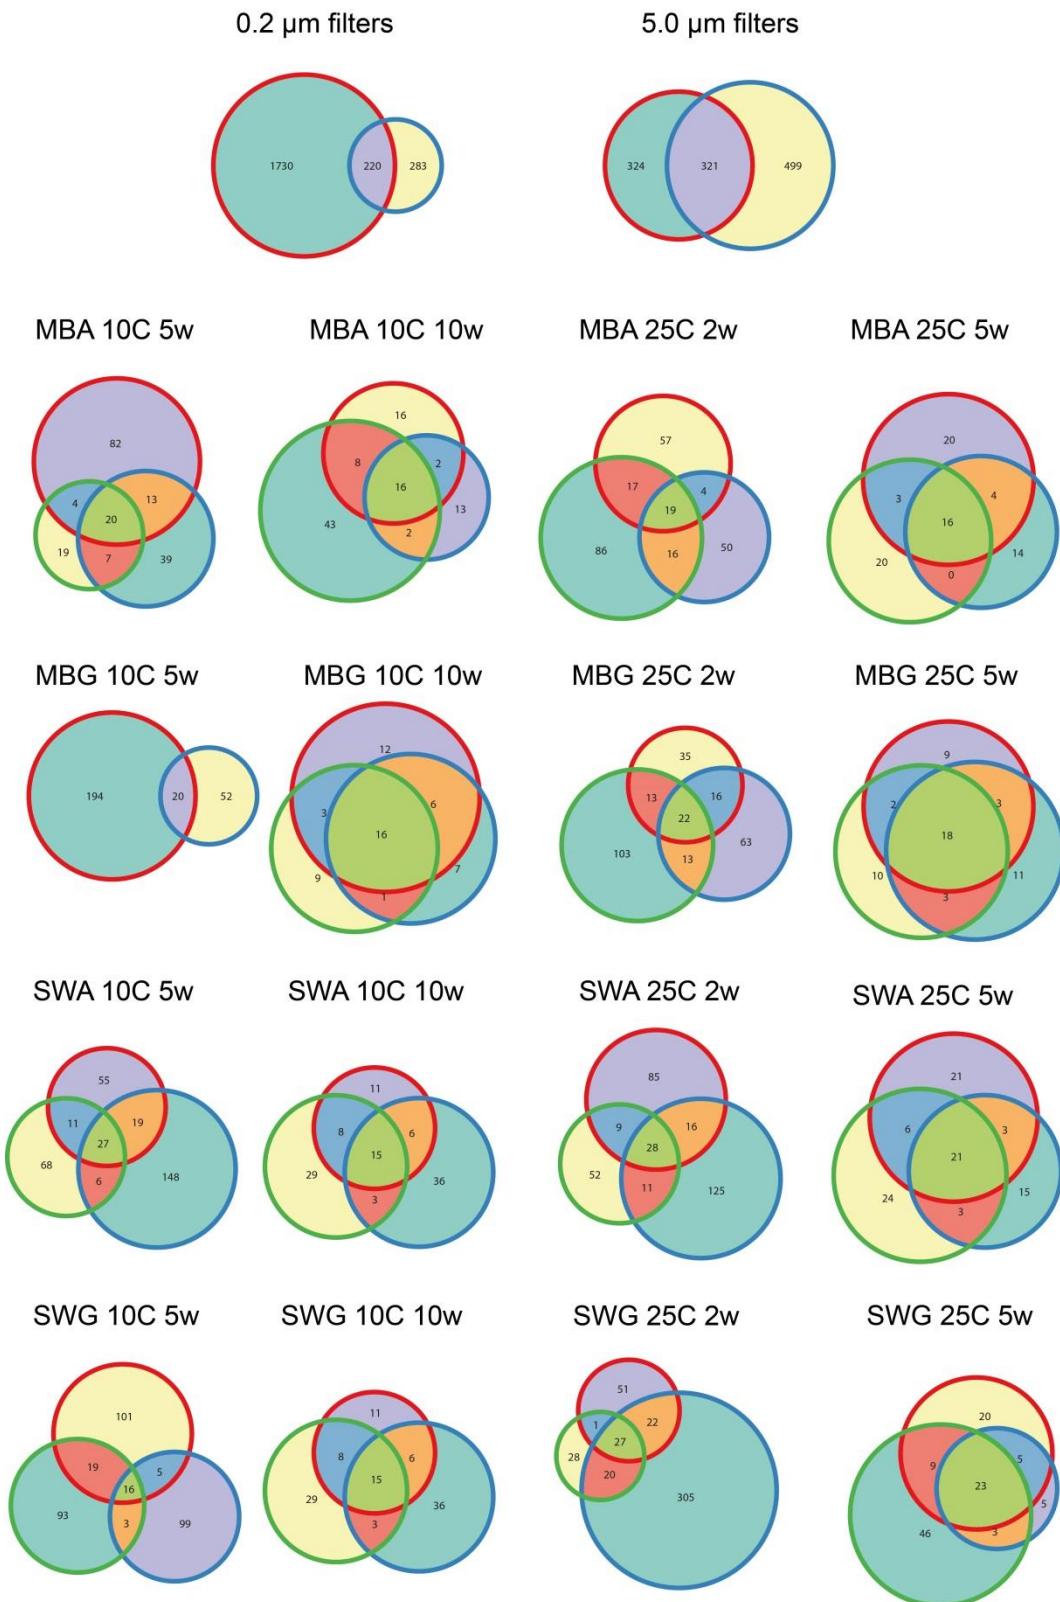

FIGURE S6 Weighted Venn diagrams showing the number of OTUs shared between replicates within each treatment during S2, excluding communities from plates supplemented with AHLs. Diagrams are only weighted within treatments.

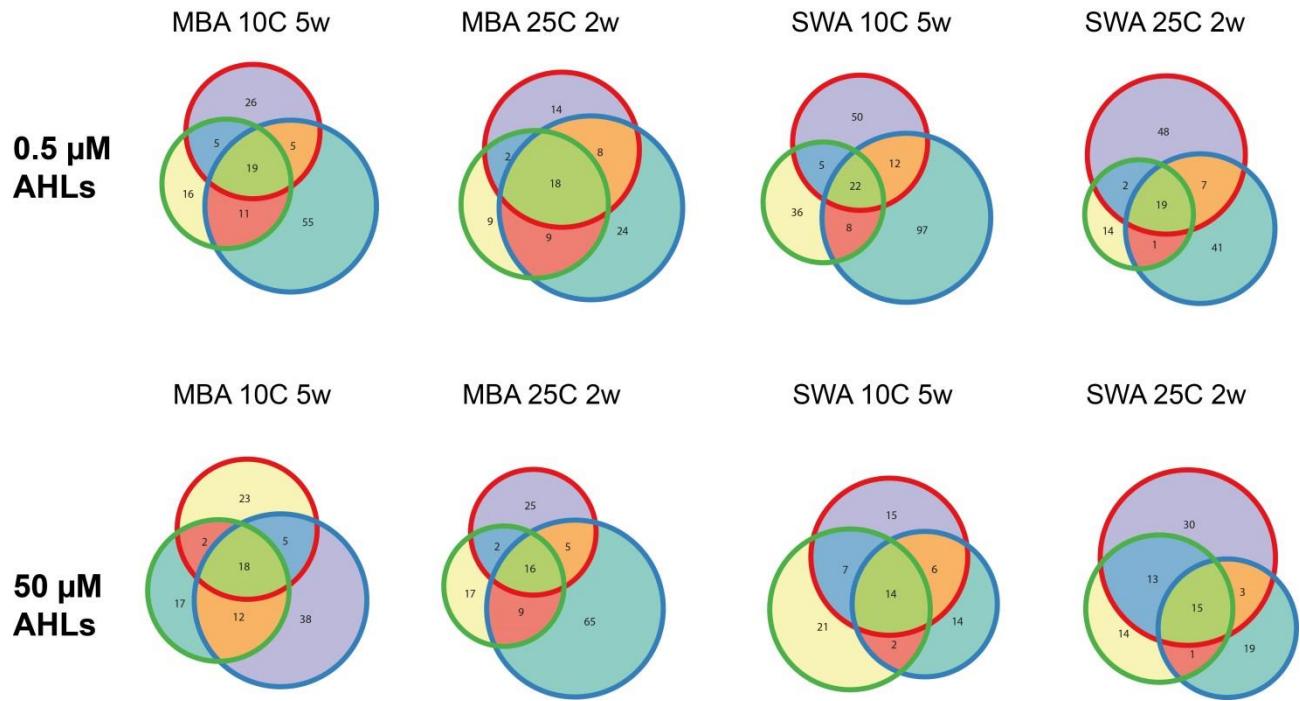

FIGURE S7 Venn diagrams showing the number of OTUs shared between replicates within each of the AHL-supplemented treatments during S2. Diagrams are only weighted within treatments.
