

Supplementary Figure S2. Insertion of an additional copy of mir-124(T) sequence between NS5 gene and 5' end of IRES in IRES-C reduces mortality of newborn SW mice after IC infection with bicistronic LGTV.

(A) Schematic representation of the viral genomes used in the study. (B) Survival of newborn SW mice (n=10) inoculated IC with 10^3 pfu/mouse of rLGTVs. Differences in survival curves were compared using log-rank (Mantel-Cox) test.
