**Supplementary Figure S1. Expression levels of *Arf1*, *5* and *6* mRNA in primary cultured keratinocytes prepared from control and K-*Arf6*-cKO mice.** Primary cultured keratinocytes prepared from control and K-*Arf6*-cKO mice were stimulated without or with 50 ng/ml of HGF for 3 hr, then *Arf1* (A), *Arf5* (B) and *Arf6* mRNA levels (C) were analyzed by qPCR. Data show the means  $\pm$  SEM from three independent experiments. Statistical significance was assessed by one-way ANOVA with Scheffe's post-hoc test; \* $P$ <0.05, n.s., not significant.
