S2 Fig. Alignment of DL and related protein sequences. Orthologs of rice DL (accession: Q76EJ0, OsDL) in *Brachypodium distachyon* (XP_010228969.1, BdDL), barley (BAK04901.1, HvDL), and the A-genome (306676_AA1011910.1, TaDL-A), B-genome (321049_AA1054410.1, TaDL-B) and D-genome of wheat (343031_AA1127860.1, TaDL-D) were aligned. Conserved amino acid residues are indicated by asterisks and the YABBY domain by the orange bar.
