

Supplemental Figure S8: Recombination rate ρ in 50-kb and 5-kb windows on chromosome 18 of *carion crow*. Black dots correspond to the weighted mean of ρ per bp in 50-kb and 5-kb windows, respectively. Note that, for better comparison, the y-axis on the lower plot (5-kb windows) has the same scale as than the upper (50-kb windows). This excludes some extreme values in the 5-kb plot (ranging from 0.1-4.6).
