

S1 Fig. Total sugar contents in leaves [$\mu\text{mol gFW}^{-1}$] and in nectar [mM] of the same *Nicotiana* species. Neither does a noteworthy correlation exist between the total concentrations in nectar and leaves ($R^2 = 0.02$, $p = 0.108$) nor between the percentages of the main sugars in leaves and in nectar, e.g. glucose ($R^2 = 0.005$, $p = 0.020$), fructose ($R^2 = 0.001$, $p = 0.130$), and sucrose ($R^2 = 0.073$, $p < 0.001$).
