

S5 Appendix. Analysis of the continuous version of the GHRN1 model.

The 11 activity configurations of the fixed-point attractors recovered by Boolean networks are steady states in the continuous extension of the model.

For this analysis we used the same parameters for all the nodes of the model ($h=50$ and $\gamma=1$). We set as initial condition the activity configurations of the attractors recovered by the Boolean network in the synchronic updating scheme. The configuration at which the continuous model converges at time 20 is shown. The 11 fixed-point attractors are steady states in the continuous model. That is not the case for the cyclic attractors that instead converge to one of the 11 configurations.

GHRN1

Configurations attained by solving the system from 100,000 random initial conditions.

For this analysis we used the same parameters for all the nodes of the model ($h=50$ and $gamma=1$). The initial conditions for the continuous model were set at random, where each node acquires a value from the range 0-1. Then the system was solved until a steady state was attained. We repeated this process 100,000 and quantified that all initial conditions converge to one of the 11 attractors.

Parameter analysis.

To analyze the effect of the parameters on the behavior of the system, we used 100 sets of random parameters. In each set, the parameters h and γ of each node were chosen at random from the ranges 10-50 and 0.5-1, respectively. Then, we used 10,000 random initial conditions and solved each system. In all the initial conditions and for all sets, the system converged to one of the 11 attractors described before. Below we show the parameters used in this analysis in the following order: h_{CK} , h_{ARR1} , h_{SHY2} , h_{AUXIAA} , h_{ARF} , h_{ARF10} , h_{ARF5} , h_{AUX} , h_{SCR} , h_{SHR} , h_{MIR166} , h_{PHB} , h_{JKD} , h_{MGP} , h_{WOX5} , h_{CLE40} , γ_{CK} , γ_{ARR1} , γ_{SHY2} , γ_{AUXIAA} , γ_{ARF} , γ_{ARF10} , γ_{ARF5} , γ_{AUX} , γ_{SCR} , γ_{SHR} , γ_{MIR166} , γ_{PHB} , γ_{JKD} , γ_{MGP} , γ_{WOX5} and γ_{CLE40} .
