

Figure S4: Phage drop test for *P. aeruginosa* PA14 and PAO1 reference strains. Bacterial lawns of *P. aeruginosa* PA14 and PAO1 strains were propagated in LB agar plates by plating 100 μL of overnight cultures and 10 μL droplets of phages (10^7 - 10^{10} PFU ml^{-1}). The plates were incubated 18 h at 37° C and checked for presence of lysis plaques. Only plaques formed with 10^{10} PFU ml^{-1} droplets are shown.
