

### A. BAG4, IL6ST, VWF, EGFR

### B. BAG4, IL6ST, VWF, CD44

**Supplementary figure 7. Case prediction ability of the four protein panels and EGFR or CD44 sialyl Lewis-A and -X supplemented panels for adenoma and cancer samples.** Case predictive index of the four protein panels and glycan information (sialyl Lewis-A and -X) supplemented protein-glycemic panel were plotted for EDRN subgroups of adenoma, cancer and advanced adenoma plus stage I-II cancer. Adenoma includes all adenomas. AA: Advanced adenoma, only includes >1cm adenomas. I, II: cancer stages I and II. \*\*,  $p < 0.01$ ; \*\*\*,  $p < 0.001$ ; \*\*\*\*,  $p < 0.0001$ .
