

S100A7 promotes the migration, invasion and metastasis of human cervical cancer cells through epithelial–mesenchymal transition

SUPPLEMENTARY FIGURE

Supplementary Figure 1: S100A7 has no impact on cell proliferation and cell cycle progression of cervical cancer cells. Cell proliferation was determined by CCK-8 assay in C33A **A.** and SiHa **B.** cells. Cell-cycle distribution was analyzed by FACS in C33A **C.** and SiHa **D.** cells.
