

Supplemental Figure 4

BMP-7 induces cell death in GC B cells.

Bead-isolated GC B cells from human tonsils were seeded in 48-well plates pre-coated with HK cells and cultured for four days. The cells were then stained with (PI) and analyzed by flow cytometry. Shown here are percent PI+ cells, mean \pm SEM, $n = 3$. * denotes statistical significance ($p < 0.05$), paired, two-tailed Student's t -test.
