GLOBAL ASSESSMENT OF FUNCTIONING
Current GAF
DSM-IV Axis V: Global Assessment of Functioning Scale Consider psychological, social, and occupational functioning on a hypothetical continuum of mental health-illness. Do not include
impairment in functioning due to physical (or environmental) limitations. Indicate appropriate code for the LOWEST level of functioning

ALLERGIES:

Do you have any allergies? To Medications? Other?

during the week of POOREST functioning. (Use intermediate level when appropriate, e.g., 45, 58, 72.)

Superior functioning in a wide range of activities, life's problems never seem to get out of hand, is sought out by others because of

Superior functioning in a wide range of activities, life's problems never seem to get out of hand, is sought out by others because of his or her many positive qualities. No symptoms.

Absent or minimal symptoms (e.g., mild anxiety before an exam), good functioning in all areas, interested and involved in a wide range of activities, socially effective, generally satisfied with life, no more than everyday problems or concerns (e.g., an occasional

81	argument with family members).
80	If symptoms are present, they are transient and expectable reactions to psychosocial stressors (e.g., difficulty concentrating after family argument), no more than slight impairment in social, occupational, or school functioning (e.g., temporarily falling behind In
71	school work).
70 61	Some mild symptoms (e.g., depressed mood and mild Insomnia) OR some difficulty in social, occupational, or school functioning (e.g., occasional truancy, or theft within the household), but generally functioning pretty well, has some meaningful interpersonal relationships.
60	Moderate symptoms (e.g., flat affect and circumstantial speech, occasional panic attacks) OR moderate difficulty in social, occupational, or school functioning (e.g., few friends, conflicts with co-workers).
51	
50	Serious symptoms (e.g., suicidal ideation, severe obsessional rituals, frequent shoplifting) OR any serious impairment in social, pccupational, or school functioning (e.g., no friends, unable to keep a job).
41	
40	Some impairment in reality testing or communication (e.g., speech is at times illogical, obscure, or irrelevant) OR major impairment in several areas, such as work or school, family relations, judgment, thinking, or mood (e.g., depressed man avoids friends, neglects
31	family, and is unable to work; child frequently beats up younger children, Is defiant at home, and is failing at school).
30 21	Behavior is considerably influenced by delusions or hallucinations OR serious impairment in communication or judgment (e.g., sometimes Incoherent, acts grossly inappropriately, suicidal preoccupation) OR inability to function in almost all areas (e.g., stays in bed all day; no job, home, or friends)
20 11	Some danger of hurting self or others (e.g., suicide attempts without clear expectation of death, frequently violent, manic excitement) OR occasionally fails to maintain minimal personal hygiene (e.g., smears feces) OR gross impairment in communication (e.g., largely incoherent or mute)
10 1	Persistent danger of severely hurting self or others (e.g., recurrent violence) OR persistent inability to maintain minimal personal hygiene OR serious suicide act with clear expectation of death

Date of Onset	Age	Date of Offset	Duration (days)	
			Depression Criter	.:_

Now I would like to ask you some more specific questions about (TIME PERIOD FOR SUSPECTED DEPRESSIVE EPISODE).

Episode B: Worst Depression

A. Five or more of the following symptoms have been present during the same two-week period and represent a change from previous functioning; at least one of the symptoms was either (1) depressed mood or (2) loss of interest or pleasure.

During this time, (TIME PERIOD FOR SUSPECTED DEPRESSIVE EPISODE) were you depressed or down, most of the day nearly every day? (What was that like?)

IF YES: When was that? How long did it last? As long as two weeks?

- (1) depressed mood most of the day, nearly every day, as indicated by either subjective report (e.g., feels sad or empty) or observations made by others (e.g., appears tearful). Note: in children and adolescents, can be irritable mood.
- 0 0 0 2

Did you lose interest or pleasure in things you usually enjoyed? (What was that like?)

(2) markedly diminished interest or pleasure in all, or almost all, activities most of the day, nearly every day (as indicated either by subjective account or observation made by others)

0 0 0 0 2

IF YES: When was that? Was that nearly every day How long did it last? As long as two weeks?

FOR ALL SUBJECTS, CONTINUE ASKING ABOUT ALL SYMPTOMS EVEN IF A(1) AND/OR (2) ARE NOT ENDORSED.

NOTE: WHEN RATING THE FOLLOWING ITEMS, CODE "1" IF CLEARLY DUE TO A GENERAL MEDICAL CONDITION, SUBSTANCE, OR TO MOOD-INCONGRUENT DELUSIONS OR HALLUCINATIONS. TO COUNT TOWARD A MAJOR DEPRESSIVE EPISODE, A SYMPTOM MUST EITHER BE NEWLY PRESENT OR MUST HAVE CLEARLY WORSENED COMPARED WITH THE PERSON'S PRE-EPISODE STATUS

I would like you to focus on the worst two week period when answering the following questions. During (TIME PERIOD OF EPISODE) FOCUS ON WORST TWO WEEK PERIOD OF EPISODE TO DETERMINE IF FULL MAJOR DEPRESSIVE EPISODE CRITERIA ARE MET (3) significant weight loss when not dieting, or ...did you lose or gain any weight? (How much? 0 0 0 weight gain (e.g., a change of more than 5% of 1 2 Were you trying to lose weight?) 3 IF NO: How was your appetite? What about body weight in a month), or decrease or increase compared to your usual appetite? Did you have to in appetite nearly every day. Note: in children, force yourself to eat? Eat (less/more) than usual? consider failure to make expected weight gains. Was that nearly every day? Check if: weight loss or decreased appetite O weight gain or increased appetite O ...how were you sleeping? (Trouble falling asleep, (4) insomnia or hypersomnia nearly every day 0 0 0 0 waking frequently, trouble staying asleep, waking 1 2 3 too early, OR sleeping too much? NOTE: THE FOLLOWING QUESTION WAS LEREADY ASKED IN THE CONTEXT OF MELANCHOLIC FEATURES] Usually when you are (DEPRESSED /OWN SQUIVALENT)	ATYPICAL FEATURES CRITERIA					
	The following features characteristic of the majority of Major Depressive Episodes:					
if something good happens to you or someone tries to cheer you up, do you feel better, at least for a while?	A. Mood reactivity (i.e., mood brightens in response to actual or potential positive events.)	O ?	O 1	O 2		
CODE BASED ON PREVIOUS ANSWERS OR ASK THE FOLLOWING IF UNKNOWN:]	B. Two (or more) of the following features:					
Do you gain weight or have an increased appetite?	(1) Significant weight gain or increase in appetite	O ?	O 1	O 2		
How many hours (in a 24-hour period) do you usually sleep (including naps)?	(2) hypersomnia NOTE: CODE "3" IF MORE THAN 10 HOURS A DAY	O ?	O 1	O 2	O 3	
Do your arms or legs often feel heavy (as though they were full of lead)?	(3) leaden paralysis (i.e., heavy leaden feelings in arms or legs)	O ?	O 1	O 2		
Are you especially sensitive to how others treat you? What happens to you when someone rejects, criticizes, or slights you? (Do you get very down or angry? For how long? How has this affected you? Is your reaction more extreme than most people's?) Have you avoided doing things or being with people because you were afraid of being criticized or rejected?	(4) longstanding pattern of interpersonal rejection sensitivity (not limited to episodes of mood disturbance) that results in significant social or occupational impairment	O ?	O 1	O 2	O 3	
	AT LEAST TWO "B" CRITERIA ARE CODED "3"	fals	_			

C. Criteria are not met for "With Melancholic

Features" or "With Catatonic Features" during the same episode.

Module A: Mania

MANIC AND HYPOMANIC EPISODES

Episodes Summary

POSSIBLE MANIC OR HYPOMANIC EPISODES SHOULD BE REVIEWED IN THIS MODULE AS LISTED BELOW. YOU SHOULD GO THROUGH THIS SECTION AS MANY TIMES AS NECESSARY (UP TO 5), ONCE FOR EACH EPISODE AS DETERMINED FROM THE OVERVIEW IN ORDER TO DETERMINE IF A CURRENT EPISODE IS PRESENT, IF A PAST EPISODE WAS PRESENT, AN ESTIMATE OF THE NUMBER OF EPISODES, AND THE AGE AT ONSET OF THE FIRST EPISODE. THE LAST MONTH (A - CURRENT EPISODE) SHOULD ALWAYS BE REVIEWED. ALL SYMPTOMS SHOULD BE QUERIED FOR CURRENT AND SUSPECTED PAST EPISODES.

IF IT IS UNCLEAR FROM THE OVERVIEW WHETHER ANY PAST EPISODES HAVE OCCURRED, ASK QUESTIONS A1 AND A2 (p.A21 - A22) IN ORDER TO IDENTIFY POSSIBLE EPISODES OF MANIA OR HYPOMANIA FOR FURTHER CODING. ASSESS EACH ÜNCLEAR SUSPECTED EPISODE.

For example: "Have you ever had a period of time when you were feeling so good or hyper that other people thought you were not your normal self or you were so hyper that you got into trouble? When was it? How long did it last? ..."

- A THE LAST MONTH SHOULD BE REVIEWED FOR POSSIBLE CURRENT MANIA OR HYPOMANIA
- B THE MOST LIKELY WORST PAST EPISODE IF DIFFERENT FROM A
- C THE MOST LIKELY FIRST EPISODE IF DIFFERENT FROM A OR B
- D ANOTHER EPISODE AS NECESSARY TO DETERMINE RECURRENCE, # OF EPISODES, OR AGE AT ONSET
- Ε

- ANOTHER EPISODE AS NECESSARY TO DETERMINE RECURRENCE, # OF EPISODES, OR AGE AT ONSET
Date of Onset Age Date of Offset Duration (days) A - CURRENT (LAST MONTH) O Go There
3 - WORST EPISODE O Go There
C - FIRST O Go There
D - ANOTHER EPISODE O Go There
E - ANOTHER EPISODE O Go There
Manic and Hypomanic Episode A (Current)
Date of Onset Age Date of Offset Duration (days) Now I'd like to ask you more specific questions about (TIME PERIOD FOR SUSPECTED MANIC DR HYPOMANIC EPISODE). A1. (Mania and Hypomania) During (TIME PERIOD FOR EPISODE) were you eeling so good or hyper that other people thought you were not your normal self or you were so hyper hat you got into trouble? (Did anyone say you were manic? Was that more than just feeling good?) F NO: What about feeling so irritable that you found yourself shouting at people or starting fights or arguments? Did you find yourself shouting at people you really didn't know?
What was it like? CHECK ONE: O elevated/expansive mood O irritable mood

	Select if this is a manic or hypomanic episoide	N	O anic	Нур	O omanic
A2. (Mania)					
How long did that last? (As long as one week? Did you have to go to the hospital?)	A(2) Episode lasted at least one week (any duration if hospitalization is necessary, psycho is present, or very dangerous behaviors are present)	C sis 1			
Did it last for at least two days?	Brief Mania (2 day duration required) PER KELSOE CONVENTION, BRIEF MANIA WILL BE INCLUDED IN THE MANIA ASSESSMENT, SPECIFIC PATTERNS.	C 1			
A2. (Hypomania)					
Did it last for at least four days? What was that like?	A(2) Episode lasted throughout at least 4 days and is clearly different from the usual non-depressed mood	, C) O 3		
What was it like?	CHECK ONE:	O elevated/expansive m			mood
		O irritable r	nood		
Did it last for at least two days?	Brief Hypomania (2 day duration required)	1	3		
	PER KELSOE CONVENTION, BRIEF HYPOMANIA WILL BE INCLUDED IN THE HYPOMANIA ASSESSMENT

	AT LEAST TWO "B" SYMPTOMS CODED "3"	false			
What is the longest period of time, during this period of depression, that you felt okay (NO DYSTHYMIC SYMPTOMS)?	C. During the two year period (one year for children or adolescents) of the disturbance, the person has never been without the symptoms in criteria A and B for more than two months at a	_	O C 1 2	_	

How long have/had you been feeling this depression? How old were you the very first time you felt this way for at least two years?

IF COMPLETED CURRENT SECTION ON A37 FOR CRITERION A, USE THAT INFORMATION TO ANSWER THIS QUESTION.

IF A MAJOR DEPRESSIVE EPISODE PRECEDED DYSTHYMIC SYMPTOMS: Now I want to know whether you got completely back to your usual self after that (MAJOR DEPRESSIVE EPISODE) you had (DATE), before this long period of being mildly depressed? (Were you back to your usual self for at least two months?)

D. No Major Depressive Episode during the first two years of the disturbance (one year for children and adolescents); i.e., not better accounted for by chronic Major Depressive Disorder or Major Depressive Disorder in partial remission.

Note: There may have been a previous Major Depressive Episode provided there was a full remission (no significant signs or symptoms for two months) before development of the Dysthymic Disorder. In addition, after the initial two years (one year for children or adolescents) of Dysthymic Disorder, there may be superimposed episodes of Major Depressive Disorder, in which case both diagnoses may be given when the criteria are met for a Major Depressive Episode.

NOTE: CODE "3" IF NO PAST MAJOR DEPRESSIVE EPISODES OR IF MAJOR DEPRESSIVE EPISODES WERE NOT PRESENT DURING THE FIRST TWO YEARS OR IF THERE WAS AT LEAST A TWO MONTH PERIOD WITHOUT SYMPTOMS PRECEDING THE ONSET.

Age at onset of Dysthymic Disorder

COMPARE ONSET OF DYSTHYMIC SYMPTOMS WITH DATES OF PAST MAJOR DEPRESSIVE EPISODES TO DETERMINE IF THERE WERE ANY MAJOR DEPRESSIVE EPISODES IN FIRST TWO YEARS OF DYSTHYMIC DISORDER.

E. There has never been a Manic, Mixed, or Hypomanic Episode, and the criteria have never been met for Cyclothymic Disorder. If necessary, go to Cyclothymic Disorder page A44 and complete section before returning here to code this item.

MOOD DISORDER DUE TO A GENERAL MEDICAL	CONDITION	
IF SYMPTOMS NOT TEMPORALLY ASSOCIATED *SUBSTANCE-INDUCED MOOD DISORDER	WITH A GENERAL MEDICAL CONDITION, CHECK I	
	0.0	Check Here
	MOOD DISORDER DUE TO A GENERAL MEDICAL	CONDITION CRITERIA
CODE BASED ON INFORMATION ALREADY OBTAINED	A. A prominent and persistent disturbance in mood predominates in the clinical picture and is characterized by either (or both) of the following:	
	(1) depressed mood or markedly diminished interest or pleasure in all, or almost all, activities	O O O O ? 1 2 3
	(2) elevated, expansive, or irritable mood	O O O O ? 1 2 3
	MET EITHER A1 AND/OR A2 CRITERION (OR BOTH)	false
Do you think your (MOOD SYMPTOMS) were in any way related to your (COMORBID GENERAL MEDICAL CONDITION)? IF YES: Tell me how. Did the (MOOD SYMPTOMS) start or get much worse only after (COMORBID GENERAL MEDICAL CONDITION) began?	B./C. There is evidence from the history, physical examination, or laboratory findings that the disturbance is the direct physiological consequence of a general medical condition and the disturbance is not better accounted for by another mental disorder (e.g., Adjustment Disorder With Depressed Mood, in response to the stress of having a general medical condition).	O O O O ? 1 2 3
IF YES AND GMC HAS RESOLVED: Did the (MOOD SYMPTOMS) get better once the (COMORBID GENERAL MEDICAL CONDITION) got better?	THE FOLLOWING FACTORS SHOULD BE CONSIDERED AND SUPPORT THE CONCLUSION THAT THE GMC IS ETIOLOGIC TO THE MOOD SYMPTOMS:	
	1) THERE IS EVIDENCE FROM THE LITERATURE OF A WELL ESTABLISHED ASSOCIATION BETWEEN THE GMC AND MOOD SYMPTOMS.	
	2) THERE IS A CLOSE TEMPORAL RELATIONSHIP BETWEEN THE COURSE OF THE MOOD SYMPTOMS AND THE COURSE OF THE GENERAL MEDICAL CONDITION.	
	3) THE MOOD SYMPTOMS ARE CHARACTERIZED BY UNUSUAL PRESENTING FEATURES (E.G., LATE AGE AT ONSET).	
	4) THE ABSENCE OF ALTERNATIVE EXPLANATIONS (E.G., MOOD SYMPTOMS AS A PSYCHOLOGICAL REACTION TO THE GMC).	

L IF UNKNOWN: How much did (MOOD SYMPTOMS) interfere with your life?	E. The symptoms cause clinically significant distress or impairment in social, occupational, or other important areas of functioning.	O O O O ? 1 2 3
	D. The disturbance does not occur exclusively during the course of Delirium.	O O 1 3
	MOOD DISORDER DUE TO A GMC CRITERIA B, C, D, AND E ARE CODED "3"	A, false

0 0

Do you think your (MOOD SXS) are in any way related to your (SUBSTANCE USE)? IF YES: Tell me how.

[ASK ANY OF THE FOLLOWING QUESTIONS AS NEEDED TO RULE OUT A NON-SUBSTANCE-INDUCED ETIOLOGY]

IF UNKNOWN: Which came first, the (SUBSTANCE USE) or the (MOOD SYMPTOMS)?

IF UNKNOWN: Have you had a period of time when you stopped using (SUBSTANCE)?

IF YES: After you stopped using (SUBSTANCE) did the (MOOD SYMPTOMS) get better?

IF UNKNOWN: How much (SUBSTANCE) were you using when you began to have (MOOD SYMPTOMS)?

IF UNKNOWN: Have you had any other episodes of (MOOD SYMPTOMS)?

IF YES: How many? Were you using (SUBSTANCES) at those times?

- C. The disturbance is not better accounted for by a Mood Disorder that is not substance-induced. Evidence that the symptoms are better accounted for by a Mood Disorder that is not substance-induced might include:
- 1) the mood symptoms precede the onset of the Substance Abuse or Dependence (or medication use)
- the mood symptoms persist for a substantial period of time (e.g., about a month) after the cessation of acute withdrawal or severe intoxication
- 3) the mood symptoms are substantially in excess of what would be expected given the type, duration, or amount of the substance used
- 4) there is evidence suggesting the existence of an independent non-substance-induced Mood Disorder (e.g., a history of recurrent Major Depressive Episodes)

F UNKNOWN: How much did (MOOD SYMPTOMS) interfere with your life?	E. The symptoms cause clinically significant distress or impairment in social, occupational, or other important areas of functioning	O ?	0	_	O 3

If these are the only mood symptoms reported in subject's lifetime, Complete Modules B and C and D1 *SUICIDAL IDEATION SUMMARY* and then skip to D35 to first make a formal diagnosis of Substance-Induced Mood Disorder and then complete Diagnostic Specifiers.

If they are not the only mood symptoms reported, return to A1 or A20 to continue coding potential

Module B: Psychotic Symptoms

THIS MODULE IS FOR CODING PSYCHOSIS AND ASSOCIATED SYMPTOMS THAT HAVE BEEN PRESENT AT ANY POINT IN THE SUBJECT'S LIFETIME.

FOR EACH PSYCHOTIC SYMPTOM CODED "3", DESCRIBE THE ACTUAL CONTENT, HOW FIRMLY THE BELIEF IS HELD, AND INDICATE THE PERIOD OF TIME DURING WHICH THE SYMPTOM WAS PRESENT.

DELUSIONS

IF ALREADY HAS ACKNOWLEDGED PSYCHOTIC SYMPTOMS: You've told me about (PSYCHOTIC SYMPTOMS). Now I'd like to ask you about other experiences like that.

IF NO ACKNOWLEDGEMENT OF PSYCHOTIC SYMPTOMS SO FAR: Now I'd like to ask you about unusual experiences that people sometimes have.

DELUSIONS CRITERIA

False personal beliefs based on incorrect inference about external reality and firmly sustained in spite of what almost everyone else believes and in spite of what constitutes incontrovertible and obvious proof or evidence to the contrary. The belief is not one ordinarily accepted by other members of the person's culture or subculture. Code overvalued ideas (unreasonable and sustained beliefs that are maintained with less than delusional intensity) as "2".

Has it ever seemed like people were talking about you or taking special notice of you?

IF YES: Were you convinced they were talking about you or did you think it might have been your imagination?

CONTINUE ASKING...

What about receiving special messages from the TV, radio, or newspaper, or from the way things were arranged around you?

,	NOTE: CODE "3" IF NO MANIC, OR MIXED EPI PSYCHOTIC SYMPTOM MOOD EPISODES. COPSYCHOTIC SXS OCCIDURING MOOD EPISO	SODES OR IF S MS OCCUR OU' DDE "1" ONLY IF UR EXCLUSIVE	SOME TSIDE OF		

[NOTE: CRITERIA ARE IN DIFFERENT ORDER THAN IN DSM-IV]

SCHIZOPHRENIA CRITERIA

REFER TO ITEMS CODED "3" IN MODULE B, PSYCHOTIC AND ASSOCIATED SYMPTOMS.

A. Two (or more) of the following, each present for a significant portion of time during a one month period (or less if successfully treated):

0 0 0 ? 1 3

0 0 0

1

- 1. delusions
- 2. hallucinations
- 3. disorganized speech (e.g., frequent derailment or incoherence)
 - 4. grossly disorganized or catatonic behavior
- 5. negative symptoms, i.e., affective flattening, alogia, or avolition

NOTE: ONLY ONE "A" SYMPTOM IS REQUIRED IF DELUSIONS ARE BIZARRE OR HALLUCINATIONS CONSIST OF A VOICE KEEPING UP A RUNNING COMMENTARY ON THE PERSON'S BEHAVIOR OR THOUGHTS, OR TWO OR MORE VOICES CONVERSING WITH EACH OTHER.

IF UNKNOWN: Has there ever been a time when you had (SYMPTOMS FROM ACTIVE PHASE) at the same time that you were (DEPRESSED/HIGH/IRRIT-ABLE/OWN EQUIVALENT)?

- D. Schizoaffective Disorder and Mood Disorder with psychotic features have been ruled out because either:
- 1. No Major Depressive, Manic or Mixed Episodes have occurred concurrently with the active phase symptoms (i.e., the "A" symptoms listed above)

CODE "3" IF NEVER ANY MAJOR DEPRESSIVE OR MANIC EPISODES OR IF ALL MAJOR DEPRESSIVE AND MANIC EPISODES OCCURRED DURING THE PRODROMOL OR RESIDUAL PHASE. CODE "1" IF ANY MOOD EPISODES OVERLAP WITH PSYCHOTIC SYMPTOMS.

NOTE: BECAUSE OF THE DIFFICULTY IN DISTINGUISHING THE PRODROMAL AND RESIDUAL SYMPTOMS OF SCHIZOPHRENIA FROM A MAJOR DEPRESSIVE SYNDROME, THE RATER SHOULD RECONSIDER ANY PREVIOUSLY CODED MAJOR DEPRESSIVE EPISODE TO BE SURE IT IS UNEQUIVOCAL.

IF UNKNOWN: How much of the time that you have had (SYMPTOPMS FROM ACTIVE AND RESIDUAL PHASES) would you say you have also been (DEPRESSED/ HIGH/IRRIT-ABLE/OWN EQUIVALENT)?

2. The total duration of mood episodes (occurring during the disturbance) has been brief relative to the total duration of the active and residual phases.

0 0 0

1 3

NOTE: CODE "1" IF SYMPTOMS MEETING CRITERIA FOR A MAJOR DEPRESSIVE, MANIC, OR MIXED EPISODE HAVE BEEN PRESENT FOR A SUBSTANTIAL PORTION OF THE TOTAL

DIFFERENTIAL DIAGNOSIS BETWEEN
SCHIZOPHRENIA AND SCHIZOPHRENIFORM
DISORDER

IF UNKNOWN: Between (MULTIPLE EPISODES), were you back to your normal self?(How long did each episode last?)

C. Continuous signs of the disturbance persist for at least six months. This six-month period must include at least one month of symptoms that meet criterion A (i.e., active phase symptoms), and may include periods of prodromal or residual symptoms. During these prodromal or residual periods, the signs of disturbance may be manifested by only negative sxs (i.e., affective flattening, alogia, avolition) or two or more symptoms listed in criterion A present in an attenuated form (e.g., odd beliefs, unusual perceptual experiences, ideas of reference).

O O O ? 1 3

IF NOT ALREADY KNOWN: When you had (A CRITERION SYMPTOMS), were you working? (having a social life, taking care of yourself)?

B. For a significant portion of the time since the onset of the disturbance, one or more major areas of functioning such as work, interpersonal relations or self-care is markedly below the level achieved prior to the onset (or when the onset is in childhood or adolescence, failure to achieve expected level of interpersonal, academic, or occupational achievement).

O O O ? 1 3

IF UNKNOWN: Were you physically ill at this time?

IF UNKNOWN: Were you taking any drugs or medicines during this time?

E. The disturbance is not due to the direct physiological effects of a substance (e.g., a drug of abuse, a medication) or to a general medical condition.

O O O ? 1 3

Etiological general medical conditions include: neurological conditions (e.g., neoplasms, cerebrovascular disease, Huntington's disease epilepsy, auditory nerve injury, deafness, migraine, central nervous system infections); endocrine conditions (e.g., hyper- and hypo-parathyroidism, hypocortisolism); metabolic conditions (e.g., hypoxia, hypercarbia, hypoglycemia); fluid or electrolyte imbalances; hepatic or renal diseases; and autoimmune disorders with central nervous system involvement (e.g., systemic lupus erythematosis).

Etiological substances include:: alcohol, amphetamine, cannabis, cocaine, hallucinogens, inhalants, opiods (meperidine), phencyclidine sedatives, hypnotics, and anxiolytics, and other or

unknown substances.

SCHIZOPHRENIA DIAGNOSTIC SPECIFIERS LIFETIME SEVERITY:

(Additional questions regarding impairment may be necessary.)

- O Mild: (GAF = 61-80) Minimum symptom criteria are met or few, if any, symptoms in excess of those required to make the diagnosis and/or symptoms result in only minimal interference in normal functioning. Either mild disability is present or substantial or unusual effort is needed to function normally.
- O Moderate: (GAF = 51-60) Intermediate between "mild" and "severe."
- O Severe: (GAF It;= 50) Several symptoms in excess of those required to make the diagnosis and/or symptoms result in only limited functioning in most aspects of life almost all the time.
- O No Information

PSYCHOTIC FEATURES:

(This rating refers to Schizophrenia over the subject's lifetime.)

- O With Prominent Negative Symptoms: Prominent negative symptoms are present during the majority of the illness.
- O Without Prominent Negative Symptoms: No prominent negative symptoms are present during the majority of the illness.
- O No Information

CURRENT STATE:

- O Single Episode In Partial Remission: This specifier applies when there has been a single episode in which criterion A for Schizophrenia is met and some clinically significant residual symptoms remain for less than two months following the end of the episode.
- O Single Episode In Full Remission: This specifier applies when there has been a single episode in which criterion A for Schizophrenia is met and no clinically significant residual symptoms remain for the past two months.
- O Currently Meets Full Criteria: Full Criteria for an illness must be met at the time of the interview.
- O Currently Symptomatic: Symptoms are present but full criteria are not met. This differs from Partial Remission in that it does not immediately follow a period of illness (i.e., there was a symptom-free period of at least two months before the current symptoms began).
- O No Information

LIFETIME COURSE:

- O Episodic With Interepisode Residual: This specifier applies when the course is characterized by episodes in which criterion A for Schizophrenia is met and there are clinically significant residual symptoms between these episodes.
- O Episodic With No Interepisode Residual: This specifier applies when the course is characterized by episodes in which criterion A for Schizophrenia is met and there are no clinically significant residual symptoms between these episodes.

O Continuous: This specifier applies when character illness.	eristic symptoms of criterion A are met throughout all (or r	nost) of the course of

FEATURES/SUBTYPES:

(Specify type on the basis of predominant theme of the delusion(s).)

- O With Marked Stressor(s): This specifier may be noted if the psychotic symptoms develop shortly after and apparently in response to one or more events that, singly or together, would be markedly stressful to almost anyone in similar circumstances in that person's culture. The precipitating event(s) may be any major stress, such as the loss of a loved one or the psychological trauma of combat. Determining whether a specific stressor was a precipitant or a consequence of the illness may sometimes be clinically difficult. In such instances, the decision will depend on related factors such as the temporal relationship between the stressor and the onset of the symptoms, ancillary information from a spouse or friend about the level of functioning prior to the stressor, and history of similar responses to stressful events in the past.
- O Without Marked Stressor(s): This specifier may be noted if the psychotic symptoms are not apparently in response to events that would be markedly stressful to almost anyone in similar circumstances in the person's culture.
- O Unspecified
- O No Information

CHRONOLOGY

How old were you when you first began to have these experiences regularly?

PSYCHOTIC DISORDER DUE TO A GENERAL MEDICAL CONDITION CRITERIA

CODE BASED ON INFORMATION ALREADY OBTAINED

A. Prominent hallucinations or delusions.

0 0 0 ? 1 3

Do you think your DELUSIONS/HALLUCINATIONS) were in any way elated to your (COMORBID GENERAL MEDICAL CONDITION)? F YES: Tell me how. Did the (DELUSIONS/HALLUCINATIONS) start or get much worse only after (COMORBID GENERAL MEDICAL CONDITION) began?	B. There is evidence from the history, physical examination, or laboratory findings that the disturbance is the direct physiological consequence of a general medical condition. THE FOLLOWING FACTORS SHOULD BE CONSIDERED AND SUPPORT THE CONCLUSION THAT THE GMC IS ETIOLOGIC TO THE PSYCHOTIC SYMPTOMS: 1) There is evidence from the literature of a well-established association between the GMC and psychotic symptoms. 2) There is a close temporal relationship between the course of the psychotic symptoms and the course of the general medical condition. 3) The psychotic symptoms are characterized by unusual presenting features (e.g., late age at onset). 4) The absence of alternative explanations.	0 ?	0 1	O 3
CODE BASED ON INFORMATION ALREADY OBTAINED	C. The disturbance is not better accounted for by another mental disorder.	O ?	0	O 3

BIPOLAR I DISORDER		
BIPOLAR I DISORDER DIFFERENTIAL CRITERIA	History of one or more Manic or Mixed Episodes	0 0
	NOTE: A MIXED EPISODE IS DEFINED AS AN EPISODE IN WHICH THE CRITERIA ARE MET FOR A MANIC EPISODE AND A MAJOR DEPRESSIVE EPISODE (EXCEPT FOR DURATION) NEARLY EVERY DAY DURING AT LEAST A ONE-WEEK PERIOD	1 3
	At least one Manife on Min. 18 1 1 1 1 1 1 1	

FEATURES/SUBTYPES:

NOTE: MANIC-LIKE EPISODES THAT ARE CLEARLY CAUSED BY SOMATIC ANTIDEPRESSANT TREATMENT (E.G., MEDICATION, ECT, LIGHT THERAPY) SHOULD COUNT TOWARD A DIAGNOSIS OF BIPOLAR I DISORDER (KELSOE CONVENTION)

	At least one Depressed, Manic or Mixed Episode is not better accounted for by Schizoaffective Disorder and is not superimposed on Schizophrenia, Schizophreniform Disorder, Delusional Disorder, or Psychotic Disorder NOS
--	--

BIPOLAR I DISORDER DIAGNOSTIC SPECIFIERS LIFETIME SEVERITY:

(Additional questions regarding impairment may be necessary.)

- O Mild: (GAF = 61-80) Minimum symptom criteria are met for a Manic Episode or few, if any, symptoms in excess of those required to make the diagnosis and symptoms result in only minor impairment in occupational functioning or in usual social activities or relationships with others. Either mild disability is present or substantial or unusual effort is needed to function normally.
- O Moderate: (GAF = 51-60) Extreme increase in activity or impairment in judgment; intermediate between "mild" and "severe."
- O Severe: (GAF = 50) Several symptoms in excess of those required to make the diagnosis, and symptoms markedly interfere with occupational functioning or with usual social activities or relationships with others. Almost continual supervision is required during many episodes in order to prevent physical harm to self or others.
- O No Information

PSYCHOTIC FEATURES:

(This rating refers to Bipolar I Disorder over the subject's lifetime. Psychotic symptom ratings in Module A refer to the actual depression and manic episodes as opposed to the diagnosis as a whole.)

- O Mood-Congruent Psychotic Features: Delusions or hallucinations whose content is entirely consistent with either the typical manic themes of inflated worth, power, knowledge, identity, or special relationship to a deity or famous person, or the typical depressive themes of personal inadequacy, guilt, disease, death, nihilism, or deserved punishment.
- O Mood-Incongruent Psychotic Features: Delusions or hallucinations whose content does not involve either typical manic themes of inflated worth, power, knowledge, identity, or special relationship to a deity or famous person or typical depressive themes of personal inadequacy, guilt, disease, death, nihilism, or deserved punishment. Included are such symptoms as persecutory delusions (not directly related to grandiose ideas/themes or to depressivethemes), thought insertion, thought broadcasting, and delusions of being controlled.
- O History of Psychotic Features, Unspecified
- O No History of Psychotic Features
- O No Information

CURRENT STATE:

CYCLOTHYMIC DISORDER DIAGNOSTIC SPECIFIERS LIFETIME SEVERITY:

(Additional questions regarding impairment may be necessary.)

- O Mild: (GAF = 61-80) Minimum symptom criteria are met or few, if any, symptoms in excess of those required to make the diagnosis and/or symptoms result in only minimal interference in normal functioning. Either mild disability is present or substantial or unusual effort is needed to function normally.
- O Moderate: (GAF = 51-60) Intermediate between "mild" and "severe."
- O Severe: (GAF = 50) Several symptoms in excess of those required to make the diagnosis and/or symptoms result in only limited functioning in most aspects of life almost all the time.
- O No Information

PSYCHOTIC FEATURES:

(This rating refers to Cyclothymic Disorder over the subject's lifetime. Psychotic symptom ratings in Module A refer to the actual mood symptoms as opposed to the diagnosis as a whole.)

- O Mood-Congruent Psychotic Features: Delusions or hallucinations whose content is entirely consistent with either the typical manic themes of inflated worth, power, knowledge, identity, or special relationship to a deity or famous person, or the typical depressive themes of personal inadequacy, guilt, disease, death, nihilism, or deserved punishment.
- O Mood-Incongruent Psychotic Features: Delusions or hallucinations whose content does not involve either typical manic themes of inflated worth, power, knowledge, identity, or special relationship to a deity or famous person or typical depressive themes of personal inadequacy, guilt, disease, death, nihilism, or deserved punishment. Included are such symptoms as persecutory delusions (not directly related to grandiose ideas/themes or to depressivethemes), thought insertion, thought broadcasting, and delusions of being controlled.
- O History of Psychotic Features, Unspecified
- O No History of Psychotic Features
- O No Information

CURRENT STATE:

- O In Partial Remission: Symptoms are present but full criteria are not met, or there is a period without any significant symptoms lasting less than two months following the end of the episode.
- O In Full Remission: During the past two months no significant signs or symptoms of the disturbance.
- O Currently Meets Full Criteria: Full Criteria for an illness must be met at the time of the interview.
- O Currently Symptomatic: Symptoms are present but full criteria are not met. This differs from Partial Remission in that it does not immediately follow a period of illness (i.e., there was a symptom-free period of at least two months before the current symptoms began).
- O No Information

LIFETIME COURSE:

O With Full Interepisode Recovery: This specifier is used when full remission is attained between most Mood Episodes for at least two months.

O Without Full Interepisode Recovery: This spec	cifier is used when full remission is not attained between n	nost Mood Episodes.
O Chronic: Continuously met criteria for a minim	um of two years since onset of illness	
O N/A: Only one episode

End of Mood Disorder Secondary to GMC	Continue below with Substance-Induced Mood Disorder	

(2) Medication use is etiologically related to the disturbance.		
The disturbance is not better accounted for by a Mood Disorder that is not substance induced. Evidence that the symptoms are better accounted for be a Mood Disorder that is not substance induced might include the following: the symptoms precede the onset of the substance use (or medication use); the symptoms persist for a substantial period of time (e.g., about one month) after the cessation of acute withdrawal or severe intoxication or are substantially in excess of what would be expected given the type or amount of the substance used or the duration of use; or there is other evidence that suggests the existence of an independent non-substance-induced Mood Disorder (e.g., a history of recurrent Major Depressive Episodes)	O O 1 3	
The disturbance does not occur exclusively during the course of a delirium.	O O 1 3	

There is evidence from the history, physical

SUBSTANCE INDUCED MOOD DISORDER DIAGNOSTIC SPECIFIERS LIFETIME SEVERITY:

(Additional questions regarding impairment may be necessary.)

- O Mild: (GAF = 61-80) Minimum symptom criteria are met or few, if any, symptoms in excess of those required to make the diagnosis and/or symptoms result in only minimal interference in normal functioning. Either mild disability is present or substantial or unusual effort is needed to function normally.
- O Moderate: (GAF = 51-60) Intermediate between "mild" and "severe."
- O Severe: (GAF = 50) Several symptoms in excess of those required to make the diagnosis and/or symptoms result in only limited functioning in most aspects of life almost all the time.
- O No Information

PSYCHOTIC FEATURES:

(This rating refers to the Mood Disorder Due to a GMC diagnosis. Psychotic symptom ratings in Module A refer to the actual depression and manic symptoms as opposed to the diagnosis as a whole.)

- O Mood-Congruent Psychotic Features: Delusions or hallucinations whose content is entirely consistent with either the typical manic themes of inflated worth, power, knowledge, identity, or special relationship to a deity or famous person, or the typical depressive themes of personal inadequacy, guilt, disease, death, nihilism, or deserved punishment.
- O Mood-Incongruent Psychotic Features: Delusions or hallucinations whose content does not involve either typical manic themes of inflated worth, power, knowledge, identity, or special relationship to a deity or famous person or typical depressive themes of personal inadequacy, guilt, disease, death, nihilism, or deserved punishment. Included are such symptoms as persecutory delusions (not directly related to grandiose ideas/themes or to depressivethemes), thought insertion, thought broadcasting, and delusions of

IF NO DRUG CLASSES WERE CODED "3" ON PREVIOUS PAGE (I.E., "2"S ONLY), GO TO *SUBSTANCE ABUSE*.

ASK EACH OF THE FOLLOWING SUBSTANCE DEPENDENCE QUESTIONS FOR EACH DRUG CODED "3":

IF AT LEAST THREE DRUG GROUPS USED AND PERIOD OF INDISCRIMINANT USE SEEMS LIKELY, ASK THE FOLLOWING:

You've told me that you've used (DRUG). Was there a period when you were using a lot of different drugs at the same time and it did not matter what you were taking as long as you could get high?

Behavior during the same 12-month period in which the person was repeatedly using at least three groups of substance (not including caffeine and nicotine), but no single substance predominated. Further, during this period, the Dependence criteria were (likely) met for substances as a group but not for any specific substance.

O O 1 3

NOTE: IN CASES THAT INCLUDE PERIODS OF INDISCRIMINATE USE AND OTHER PERIODS OF USE OF SPECIFIC DRUGS, POLY DRUG SHOULD BE CODED IN ADDITION TO SPECIFIC DRUG COLUMNS.

SUBSTANCE DEPENDENCE

NOTE: CRITERIA FOR DEPENDENCE ARE IN A DIFFERENT ORDER THAN IN DSM-IV.

Now I'm going to ask you some specific questions about your use of (DRUGS CODED "3").

SUBSTANCE DEPENDENCE CRITERIA

A maladaptive pattern of substance use, leading to clinically significant impairment or distress, as manifested by three (or more) of the following, occurring at any time in the same 12-month period:

Have you often found that when you started using (DRUG) you ended up using much more of it than you were planning to?

IF NO: What about using it over a much longer period of time than you were planning to?

	SED/ HYPN/ ANX	CANN ABIS	STIMU LANTS	OPIOID	COCAINE	HALL/ PCP	POLY	OTHER

LIST OF WITHDRAWAL SYMPTOMS (FROM DSM-IV CRITERIA)

Listed below are the characteristic withdrawal symptoms for those classes of psychoactive substances for which a withdrawal syndrome has been identified. (NOTE: A specific withdrawal syndrome has not been identified for CANNABIS AND HALLUCINOGENS/PCP). Withdrawal symptoms may occur following the cessation of prolonged moderate or heavy use of a psychoactive substance or a reduction in the amount used. For polysubstance use, ask about each applicable category.

SEDATIVES, HYPNOTICS, AND ANXIOLYTICS:

Two (or more) of the following, developing within several hours to a few days after cessation (or reduction) of sedative, hypnotic, or anxiolytic use, which has been heavy and prolonged:

O autonomic hyperactivity (e.g., sweating or pulse rate greater than 100)
O increased hand tremor
O insomnia
O nausea or vomiting
O transient visual, tactile, or auditory hallucinations or illusions
O psychomotor agitation
O anxiety
O grand mal seizures

STIMULANTS/COCAINE:

Dysphoric mood AND two (or more) of the following physiological changes, developing within a few hours to several days after cessation (or reduction of substance use which has been heavy and prolonged):

O fatigue								
O vivid, unpleasant dreams								
O insomnia or hypersomnia								
O increased appetite								
O psychomotor retardation or agitation								
OPIOIDS:

Module F: Anxiety Disorders

PANIC DISORDER

PANIC DISORDER CRITERIA

A. Both (1) and (2)

Have you ever had a panic attack, when you suddenly felt frightened or anxious or developed a lot of physical symptoms?

IF YES: Have these attacks ever come on completely out of the blue, in situations where you didn't expect to be nervous or uncomfortable?

IF UNCLEAR: How many of these kinds of attacks have you had? (At least two?)

(1) Recurrent, unexpected panic attacks

0 0 0 0 ? 1 2 3

0

1 2

0 0

After any of these attacks...

Did you worry that there might be something terribly wrong with you, like you were having a heart attack or were going crazy? (How long did you worry? At least a month?)

IF NO: Did you worry a lot about having another attack? How long did you worry? At least a month?

IF NO: Did you do anything differently because of the attacks(like avoiding certain places, going out alone, or certain activities like exercise.

Were you ever concerned about things like making sure you're near a bathroom or exit?)

- (2) At least one of the attacks has been followed by a month (or more) of one (or more) of the following:
- (b) worry about the implications of the attack or its consequences(e.g., losing control, having a heart attack, "going crazy")
- (a) persistent concern about having additional attacks
- (c) a significant change in behavior related to the attacks

DETERMINE IF CRITERIA ARE MET FOR A PANIC ATTACK.

When was the last bad attack? What was the first thing you noticed? Then what?

The panic attack symptoms developed abruptly and reached a peak within ten minutes

0 0 0 0

IF UNKNOWN: Did the symptoms come on all of a sudden?

IF YES: How long did it take from when it began to when it got really bad?(Less than ten minutes?)

During that attack

	PANIC DISORDER CRITERIA A, B, C, AND D ARE CODED "3."	fals	e		
PANIC DISORDER WITH AGORAPHOBIA					
	B. The presence of Agoraphobia:				
IF NOT OBVIOUS FROM OVERVIEW: Are there situations that make you nervous because you are afraid that you might have a panic attack? (Tell me about that.)	(1) Anxiety about being in places or situations from which escape might be difficult (or embarrassing) or in which help may not be available in the event of having an unexpected or situationally predisposed Panic Attack or panic-like symptoms.	O ?	0	O 2	O 3
IF CANNOT GIVE SPECIFICS: What about being uncomfortable if you aremore than a certain distance from home?in a crowded place like a busy store, movie theatre, or restaurant?standing in a line?on a bridge?using public transportation like a bus, train, or subway, or driving a car?	Agoraphobic fears typically involve characteristic clusters of situations that include being outside the home alone; being in a crowd or standing in a line; being on a bridge; and traveling in a bus, train, or automobile.				
Do you avoid these situations? IF NO: When you are in one of these situations, do you feel very uncomfortable or like you might have a panic attack? Can you go into one of these situations only if you are with someone you know?)	(2) Agoraphobic situations are avoided (e.g., travel is restricted), endured with marked distress and anxiety about having a panic attack or panic-like symptoms, or are confronted only in the presence of a companion	?	1	2	3
	(3) The anxiety or phobic avoidance is not better accounted for by another mental disorder, such as Social Phobia (e.g., avoidance limited to social situations because of fear of embarrassment), Specific Phobia (e.g., avoidance limited to a single situation like elevators), Obsessive-Compulsive Disorder (e.g., avoidance of dirt in someone with an obsession about contamination), Posttraumatic Stress Disorder (e.g., avoidance of stimuli associated with a severe stressor), or Separation Anxiety Disorder (e.g., avoidance of leaving home or relatives).	O ?	0 1	O 2	O 3

NOTE: CONSIDER SPECIFIC PHOBIA IF FEAR

IS LIMITED TO ONE OR ONLY A FEW SPECIFIC SITUATIONS OR SOCIAL PHOBIA IF FEAR IS LIMITED TO SOCIAL SITUATIONS

B(1), B(2), B(3) ALL CODED "3"	false

PANIC DISORDER DIAGNOSTIC SPECIFIERS

LIFETIME SEVERITY:

(Additional questions regarding impairment may be necessary.)

- O Mild: (GAF = 61-80) Minimum symptom criteria are met or few, if any, symptoms in excess of those required to make the diagnosis and/or symptoms result in only minimal interference in normal functioning. Either mild disability is present or substantial or unusual effort is needed to function normally.
- O Moderate: (GAF = 51-60) Intermediate between "mild" and "severe."
- O Severe: (GAF = 50) Several symptoms in excess of those required to make the diagnosis and/or symptoms result in only limited functioning in most aspects of life almost all the time.
- O No Information

CURRENT STATE:

- O In Partial Remission: Symptoms are present but full criteria are not met, or there is a period withoutany significant symptoms lasting less than two months following the end of the episode.
- O In Full Remission: During the past two months no significant signs or symptoms of the disturbance.
- O Prior History: There is a history of the criteria having been met for the disorder but the individualis considered to have recovered from it.
- O Currently Meets Full Criteria: Full Criteria for an illness must be met at the time of the interview
- O Currently Symptomatic: Symptoms are present but full criteria are not met. This differs fromPartial Remission in that it does not immediately follow a period of illness (i.e., there was a symptom-free period of at least two months before the current symptoms began).
- O No Information

LIFETIME COURSE:

- O With Full Interepisode Recovery: This specifier is used when full remission is attained betweenmost Episodes for at least two months.
- O Without Full Interepisode Recovery: This specifier is used when full remission is not attained between most Episodes.
- O Chronic: Continuously met criteria for a minimum of four years since onset of illness.

O No Information		
ONSET O History of Substance Induced Onset: Onset of pa	anic symptoms are related to a substance (e.g.,marijua	nna).
O No History of Substance Induced Onset: Onset of	of panic symptoms are not related to substanceuse.

AGORAPHOBIA WITHOUT HISTORY OF PANIC DI	SORDER (AWOPD)	
AGORAPHOBIA WITHOUT HISTORY OF PANIC DISORDER (AWOPD) CRITERIA		
` ,	A. The presence of Agoraphobia related to fear of developing panic-like symptoms (e.g., dizziness or diarrhea). Agoraphobia includes (1), (2), and (3) below:	
Were you ever afraid of going out of the house alone, being alone, being in a crowd, standing in a line, or traveling on buses or trains? (What were you afraid could happen?)	(1) Anxiety about being in places or situations from which escape might be difficult (or embarrassing) or in which help may not be available in the event of having panic-like symptoms (e.g., dizziness or diarrhea). Agoraphobic fears typically involve characteristic clusters of situations that include being outside the home alone; being in a crowd or standing in a line; being on a bridge; and traveling in a bus, train, or car	O O O O ? 1 2 3
	INDICATE FEARED SYMPTOM:	
	O having a limited symptom attack (a panic-like attack with less than four symptoms)	
	O becoming dizzy or falling	

O N/A: Only one episode

	O depersonalization or derealization	
	O loss of bladder or bowel control	
	O vomiting	
	O fear of cardiac distress	
	O other (Specify)	
	NOTE: CONSIDER THE DIAGNOSIS OF SPECIFIC PHOBIA IF THE AVOIDANCE IS LIMITED TO ONE OR ONLY A FEW SPECIFIC SITUATIONS, OR SOCIAL PHOBIA IF THE AVOIDANCE IS LIMITED TO SOCIAL SITUATIONS	
Do you avoid these situations? IF NO: When you are in one of these situations, do you feel very uncomfortable or like you might have a panic attack? Can you go into one of these situations only if you are with someone you know?)	(2) Agoraphobic situations are avoided (e.g., travel is restricted), endured with marked distress and anxiety about having panic-like symptoms, or are only confronted in the presence of a companion.	O O O O ? 1 2 3
	(3) The anxiety or phobic avoidance is not better accounted for by another mental disorder, such as Social Phobia (e.g., avoidance limited to social situations because of fear of embarrassment), Specific Phobia (e.g., avoidance limited to single situations like elevators), Obsessive-Compulsive Disorder (e.g., avoidance of dirt in someone with an obsession about contamination), Posttraumatic Stress Disorder (e.g., avoidance of stimuli associated with a severe stressor), Separation Anxiety Disorder (e.g., avoidance of leaving home or relatives).	O O O O ? 1 2 3
	AGORAPHOBIA CRITERIA A(1), A(2), A(3) ALL CODED "3"	false
	B. Criteria have never been met for Panic Disorder	O O 1 3
Just before you began having these fears, were you taking any drugs, caffeine, diet pills, or other medicines? (How much coffee, tea, or caffeinated soda do you	C. The disturbance is not due to the direct physiological effects of a substance(e.g., a drug of abuse, medication(or to a general medical condition	O O O ? 1 3

drink a day?) IF THERE IS ANY INDICATION THAT THE ANXIETY MAY BE SECONDARY (I.E., A DIRECT PHYSIOLOGICAL CONSEQUENCE OF A GMC Just before the fears began, were you physically ill? OR SUBSTANCE, GO TO *GMC/SUBSTANCE,* IF YES: What did the doctor say? F36, AND RETURN HERE TO MAKE A RATING OF "1" OR "3." Etiological general medical conditions include hyper- and hypo- thyroidism, hypoglycemia, hyperparathyroidism, pheochromocytoma, congestive heart failure, arrhythmias, pulmonary embolism, chronic obstructive pulmonary disease, pneumonia, hyperventilation, B-12 deficiency, porphyria, CNS neoplasms, vestibular dysfunction, encephalitis. Etiological substances include intoxication with central nervous stimulants (e.g., cocaine, amphetamines, caffeine) or cannabis, hallucinogens, PCP, or alcohol, or withdrawal from central nervous system depressants (e.g., alcohol, sedatives, hypnotics) or from cocaine. D. If an associated general medical condition is 0 0 0 0 present, the fear described in criterion A is clearly 2 in excess of that usually associated with the condition. AGORAPHOBIA WITHOUT HISTORY OF PANIC false DISORDER CRITERIA A, B, C AND D ARE CODED "3" AGORAPHOBIA WITHOUT HISTORY OF PANIC DISORDER DIAGNOSTIC SPECIFIERS LIFETIME SEVERITY: (Additional questions regarding impairment may be necessary.) O Mild: (GAF = 61-80) Minimum symptom criteria are met or few, if any, symptoms in excess of those required to make the diagnosis and/or symptoms result in only minimal interference in normal functioning. Either mild disability is present or substantial or unusual effort is needed to function normally.

O Moderate: (GAF = 51-60) Intermediate between "mild" and "severe."

- O Severe: (GAF = 50) Several symptoms in excess of those required to make the diagnosis and/or symptoms result in only limited functioning in most aspects of life almost all the time.
- O No Information

CURRENT STATE:

- O In Partial Remission: Symptoms are present but full criteria are not met, or there is a period withoutany significant symptoms lasting less than two months following the end of the episode.
- O In Full Remission: During the past two months no significant signs or symptoms of the disturbance.

O Currently Meets Full Criteria: Full Criteria for an	illness must be met at the time of the interview	
	but full criteria are not met. This differs fromPartial Rem was a symptom-free period of at least two months befo

Since (THE TRAUMA)	D. Persistent symptoms of increased arousal (not present before the trauma) as indicated by two (or more) of the following:	
have you had trouble sleeping? (What kind of trouble?)	(1) difficulty falling or staying asleep	O O O O ? 1 2 3
Have you been unusually irritable? What about outbursts of anger?	(2) irritability or outbursts of anger	O O O O ? 1 2 3
Have you had trouble concentrating?	(3) difficulty concentrating	O O O O ? 1 2 3
Have you been watchful or on guard even when there was no reason to be?	(4) hypervigilance	O O O O ? 1 2 3
Have you been jumpy or easily startled, like by sudden noises?	(5) exaggerated startle response	O O O O ? 1 2 3
	AT LEAST TWO D CRITERIA ARE CODED "3"	false
About how long did these problems (CITE POSITIVE PTSD SYMPTOMS) last?	E. Duration of the disturbance (symptoms in criteria B, C, and D) is more than one month	O O O O ? 1 2 3
	F. The disturbance causes clinically significant distress or impairment in social, occupational, or other important areas of functioning.	O O O O ? 1 2 3
	POSTTRAUMATIC STRESS DISORDER CRITERIA A, B, C, D, E, AND F ARE CODED "3"	false

POSTTRAUMATIC STRESS DISORDER DIAGNOSTIC SPECIFIERS

LIFETIME SEVERITY:

(Additional questions regarding impairment may be necessary.)

- O Mild: (GAF = 61-80) Minimum symptom criteria are met or few, if any, symptoms in excess of those required to make the diagnosis and/or symptoms result in only minimal interference in normal functioning. Either mild disability is present or substantial or unusual effort is needed to function normally.
- O Moderate: (GAF = 51-60) Intermediate between "mild" and "severe."
- O Severe: (GAF = 50) Several symptoms in excess of those required to make the diagnosis and/or symptoms result in only limited functioning in most aspects of life almost all the time.
- O No Information

CURRENT STATE:

- O In Partial Remission: Symptoms are present but full criteria are not met, or there is a period withoutany significant symptoms lasting less than two months following the end of the episode.
- O In Full Remission: During the past two months no significant signs or symptoms of the disturbance.
- O Currently Meets Full Criteria: Full Criteria for an illness must be met at the time of the interview
- O Currently Symptomatic: Symptoms are present but full criteria are not met. This differs fromPartial Remission in that it does not immediately follow a period of illness (i.e., there was a symptom-free period of at least two months before the current symptoms began).
- O No Information

LIFETIME COURSE:

- O Acute: This specifier should be used when the duration of symptoms is less than 3 months.
- O Chronic: This specifier should be used when the symptoms last 3 months or longer.
- O No Information

FEATURES/SUBTYPES:

- O With Delayed Onset: This specifier indicates that at least 6 months have passed betweenthe traumatic event and the onset of the symptoms.
- O Without Delayed Onset: This specifier is used if onset of symptoms is within 6 months of thetraumatic event.
- O No Information

Number of months prior to interview when last had a symptom of Posttraumatic Stress Disorder

IF UNKNOWN: How old were you when you first started having (SYMPTOMS OF PTSD)?

Age at onset of Posttraumatic Stress Disorder(CODE 99 IF UNKNOWN)

GENERALIZED ANXIETY DISORDER

IF IN RESIDUAL PHASE OF SCHIZOPHRENIA CHECK HERE O AND GO TO *ANXIETY DISORDER NOS*

GENERALIZED ANXIETY DISORDER CRITERIA

NOTE: THE DIAGNOSTIC CRITERIA ARE IN A DIFFERENT ORDER THAN APPEAR IN DSM-IV.

Have you ever had a time when you were particularly nervous or anxious? (Did you also worry a lot about bad things that might happen?)

A. Excessive anxiety and worry (apprehensive expectation), occurring more days than not for at least six months, about a number of events or

Ω \circ \circ IF YES: What did you worry about? How much did you worry about (EVENTS OR ACTIVITIES)?

IF YES: Would you say that you worried more days than not for at least six months?

When you're worrying this way, do you find that it's hard to stop yourself?	B. The person finds it difficult to control the worry.	O ?	O 1	O 2	O 3
When did this anxiety start? [COMPARE ANSWER WITH ONSET OF MOOD OR PSYCHOTIC DISORDER.]	F(2). Does not occur exclusively during the course of a Mood Disorder, Psychotic Disorder, or a Pervasive Developmental Disorder	O ?	O 1	O 2	O 3
Now I am going to ask you some questions about symptoms that often go along with being nervous. Thinking about those periods when you're feeling	C. The anxiety and worry are associated with three (or more) of the following six symptoms (with at least some symptoms present for more days than not for the past six months):				
nervous or anxious	NOTE: ONLY ONE ITEM IS REQUIRED IN CHILDREN				
do you often feel physically restless – can't sit still?	(1) restlessness or feeling keyed up or on edge	O ?	O 1	O 2	O 3
Do you often feel keyed up or on edge?					
Do you often tire easily?	(2) being easily fatigued	O ?	O 1	O 2	O 3
Do you have trouble concentrating or does your mind go blank?	(3) difficulty concentrating or mind going blank	O ?	O 1	O 2	O 3
Are you often irritable?	(4) irritability	O ?	O 1	O 2	O 3

Are your muscles often tense?	(5) muscle tension	O ?	0	O 2	O 3	
Do you often have trouble falling or staying asleep?	(6) sleep disturbance (difficulty falling or staying asleep, or restless unsatisfying sleep)	O ?	O 1	O 2	O 3	
	AT LEAST THREE C CRITERIA ARE CODED "3"	fals	e ie			
CODE BASED ON PREVIOUS INFORMATION.	D. The focus of the anxiety and worry is not confined to the features of another Axis I Disorder, e.g., the anxiety or worry is not about having a panic attack (as in Panic Disorder), being embarrassed in public (as in Social Phobia), being contaminated (as in Obsessive Compulsive Disorder), being away from home or close relatives (as in Separation Anxiety Disorder), gaining weight (as in Anorexia Nervosa), having multiple physical complaints (as in Somatization Disorder), or having a serious illness (as in Hypochon-driasis), and the anxiety or worry do not occur exclusively during Posttraumatic Stress Disorder.	0 ?	0 1	O 2	O 3	
IF UNCLEAR: What effect has the anxiety, worry, or (PHYSICAL SYMPTOMS) had on your life? (Has it made it hard for you to do your work or be with your friends?)	E. The anxiety, worry, or physical symptoms cause clinically significant distress or impairment in social, occupational, or other important areas of functioning	O ?	0	O 2	O 3	
Just before you began having this anxiety, were you taking any drugs, caffeine, diet pills, or other medicines?	F. Not due to the direct physiological effects of a substance (e.g., a drug of abuse, medication) or to a general medical condition	O ?	O 1	O 3		
(How much coffee, tea, or caffeinated soda do you drink a day?) Just before these problems began, were you physically ill?	IF THRE IS ANY INDICATION THAT THE ANXIETY MAY BE SECONDARY (I.E., A DIRECT PHYSIOLOGICAL CONSEQUENCE OF A GMC OR SUBSTANCE, GO TO *GMC/SUBSTANCE,* AND RETURN HERE TO MAKE A RATING OF "1" OR "3."					
IF YES: What did the doctor say?	Etiological general medical conditions include: hyper- and hypothyroidism, hypoglycemia, hyperparathyroidism, pheochromocytoma, congestive heart failure, arrhythmias, pulmonary embolism, chronic obstructive pulmonary disease, pneumonia, hyperventilation, B-12 deficiency, porphyria, CNS neoplasms, vestibular dysfunction, encephalitis.					
	Etiological substances include: intoxication with central nervous stimulants (e.g., cocaine, amphetamines, caffeine) or cannabis, hallucinogens, PCP, or alcohol, or withdrawal from					

central nervous system depressants (e.g., alcohol, sedatives, hypnotics) or from cocaine.

1

Did the (ANXIETY SYMPTOMS) start or get much worse only after (GMC) began?

IF GMC HAS RESOLVED: Did the (ANXIETY SYMPTOMS) get better once the (GMC) got better? B/C. There is evidence from the history, physical examination, or laboratory findings that the disturbance is the direct physiological consequence of a general medical condition and the disturbance is not better accounted for by another mental disorder (e.g., Adjustment Disorder with Anxiety), in which the stressor is a serious general medical condition).

THE FOLLOWING FACTORS SHOULD BE CONSIDERED AND SUPPORT THE CONCLUSION THAT THE GMC IS ETIOLOGIC TO THE ANXETY SYMPTOMS.

- 1) THERE IS EVIDENCE FROM THE LITERATURE OF A WELL-ESTABLISHED ASSOCIATION BETWEEN THE GMC AND ANXIETY SYMPTOMS.
- 2) THERE IS A CLOSE TEMPORAL **RELATIONSHIP BETWEEN THE COURSE OF** THE ANXIETY SYMPTOMS AND THE COURSE OF THE GENERAL MEDICAL CONDITION.

3) THE ANXIETY SYMPTOMS ARE CHARACTERIZED BY UNUSUAL PRESENTING FEATURES (E.G., LATE AGE AT ONSET)

4) THE ABSENCE OF ALTERNATIVE EXPLANATIONS (E.G., ANXIETY SYMPTOMS AS A PSYCHOLOGICAL REACTION TO THE GMC).

IF UNCLEAR: How much did (ANXIETY SYMPTOMS) interfere with your life? (Has it made it hard for you to do your work or be with your friends?)	E. The disturbance causes clinically significant distress or impairment in social, occupational or other important areas of functioning.	O O O O ? 1 2 3

O O 1 3

EATING DISORDER NOS DIAGNOSTIC SPECIFIERS

ı	IFFTIN	∧ ⊏	GE/	/ED	ITV.

(Additional	auestions	regarding	impairment	may be	necessary.)
(-1	9			

- O Mild: (GAF = 61-80) Minimum symptom criteria are met or few, if any, symptoms in excess of those required to make the diagnosis and/or symptoms result in only minimal interference in normal functioning. Either mild disability is present or substantial or unusual effort is needed to function normally.
- O Moderate: (GAF = 51-60) Intermediate between "mild" and "severe."
- O Severe: (GAF symptoms result in only limited functioning in most aspects of life almost all the time.
- O No Information

CURRENT STATE:

- O In Partial Remission: Symptoms are present but full criteria are not met, or there is a periodwithout any significant symptoms lasting less than two months following the end of the episode.
- O In Full Remission: During the past two months no significant signs or symptoms of the disturbance.
- O Current: Full Criteria for an illness must be met at the time of the interview
- O No Information

FEATURES/SUBTYPES:

- O Regular Menses: This subtype describes presentations in which, for females, all of the criteria forAnorexia Nervosa are met except that the individual has regular menses.
- O Normal Weight: This subtype describes presentations in which all the criteria for AnorexiaNervosa are met except that despite significant weight loss, the individual's current weight is in thenormal range.
- O Less Frequent: This subtype describes presentations in which all the criteria for Bulimia Nervosaare met except that the binge eating and inappropriate compensatory mechanisms occur at afrequency of less than twice a week for a duration of less than three months.
- O Small Amounts: The regular use of inappropriate compensatory behavior by an individual ofnormal body weight after eating small amounts of food (e.g., self-induced vomiting after theconsumption of two cookies).
- O Chewing/Spitting: Repeatedly chewing and spitting out, but not swallowing, large amounts offood.
- O Binge-Eating Disorder: Recurrent episodes of binge eating in the absence of regular use ofinappropriate compensatory behaviors characteristic of Bulimia Nervosa.
- O Other(describe below)
- O No Information

ATTENTION DEFICIT/ HYPERACTIVITY DISORDE	ER DIAGNOSTIC SPECIFIERS					

(Additional questions regarding impairment may be necessary.)

- O Mild: (GAF = 61-80) Minimum symptom criteria are met or few, if any, symptoms in excess of those required to make the diagnosis and/or symptoms result in only minimal interference in normal functioning. Either mild disability is present or substantial or unusual effort is needed to function normally.
- O Moderate: (GAF = 51-60) Intermediate between "mild" and "severe."
- O Severe: (GAF symptoms result in only limited functioning in most aspects of life almost all the time.
- O No Information

CURRENT STATE:

- O In Partial Remission: This specifier applies when there has been a period of ADHD symptoms, and some clinically significant residual symptoms remain for less than two months following the end of the episode.
- O In Full Remission: This specifier applies when there has been a period of ADHD synptoms, and no clinically significant residual symptoms remain for the past two months.
- O Prior History: This specifier applies when there is a history of the criteria having been met for the disorder but the individual is considered to have recovered from it.
- O Currently Meets Full Criteria: Full Criteria for an illness must be met at the time of the interview.
- O Currently Symptomatic: Symptoms are present but full criteria are not met. This differs fromPartial Remission in that it does not immediately follow a period of illness (i.e., there was asymptom-free period of at least two months before the current symptoms began).
- O No Information

LIFETIME COURSE:

- O With Full Interepisode Recovery: Full remission is attained between most Mood Episodes for at least two months.
- O Without Full Interepisode Recovery: Full remission is not attained between most Mood Episodes.
- O Chronic: Continuously met criteria for a minimum of two years since onset of illness.

O No Information
FEATURES/SUBTYPES:
O Combined Type: This subtype should be used when both criteria A1 and A2 were met for atleast six months. Most children and adolescents with the disorder have the Combined Type. It isnot known whether the same is true for adults with the disorder.
O Predominantly Inattentive Type: This subtype should be used if criterion A1 was met butcriterion A2 was not met for at least six months.
O Predominantly Hyperactive-Impulsive Type: This subtype should be used if criterion A2 wasmet but criterion A1 was not met for at least six months. Inattention may often still be asignificant clinical feature in such cases.
O No Information

INSTRUCTIONS FOR THIS SECTION

O N/A: Only one episode

PLEASE ASSESS THE SUBJECT FOR PRESENCE OF BORDERLINE PERSONALITY DISORDER AND/OR ANTISOCIAL PERSONALITY DISORDER WITH THIS QUESTIONNAIRE.

THE DIAGNOSTIC CRITERIA FOR THE PERSONALITY DISORDERS REFER TO BEHAVIORS OR TRAITS THAT ARE CHARACTISTERIC OF THE PERSON'S RECENT AND LONG-TERM FUNCTIONING SINCE EARLY ADULTHOOD. THE CONSTELLATION OF BEHAVOIRS OR TRAITS CAUSES EITHER SIGNIFICANT IMPAIRMENT IN SOCIAL OR OCCUPATIONAL FUNCTIONING OR SUBJECTIVE DISTRESS.

MANY FEATURES CHARACTERISTIC OF THE VARIOUS PERSONALITY DISORDERS, SUCH AS BORDERLINE PERSONALITY DISORDER, MAY BE SEEN DURING AN EPISODE OF ANOTHER MENTAL DISORDER, LIKE MAJOR DEPRESSION. THE DIAGNOSIS OF A PERSONALITY DISORDER SHOULD BE MADE ONLY WHEN CHARACTERISTIC FEATURES ARE TYPICAL OF A PERSON'S LONG TERM FUNCTIONING AND ARE NOT LIMITED TO DISCRETE EPISODES OF ILLNESS.

REMEMBER TO ALWAYS RATE THE ITEM AND NOT THE QUESTION.

Frequently the subject will say yes to a question but your clinical judgment will be that the item should be coded "1" or "2". Equally, the subject may say no to a question but there is evidence to the contrary. A rating of "3" should be given only if the subject provided a convincing elaboration or example or there is clear evidence from behavior during interview or from other sources that the item is true.

START by asking the indicated question and follow-up questions as needed. In addition to the questions noted, use probes like:

Give me an extreme example?

Does that happen in a lot of different situations?

Have you always been that way?

Do you think you are more this way than most people?

BORDERLINE PERSONALITY DISORDER

BORDERLINE PERSONALITY DISORDER CRITERIA

A pervasive pattern of instability of interpersonal relationships, self-image, and affects, and marked impulsivity beginning by early adulthood and present in a variety of contexts, as indicated by five (or more) of the following: Have you often become frantic when you thought 1. Frantic efforts to avoid real or imagined 0 0 0 0 that someone you really care about was going to abandonment 2 leave you? (What have you done? Have you threatened or pleaded with him/her?) NOTE: DO NOT INCLUDE SUICIDAL OR SELF-MUTILATING BEHAVIOR COVERED IN (5) IF CODED "3", GIVE SEVERAL EXAMPLES Do your relationships with people you really care 2. A pattern of unstable and intense interpersonal 0 0 0 0 about have lots of ups and downs? (Tell me about relationships characterized by alternating between 2 extremes of idealization and devaluation them.) Were there times when you thought they were CODE "3" WHEN EITHER ONE PROLONGED everything you wanted and then other times when RELATIONSHIP OR SEVERAL BRIEFER you thought they were terrible? (How many RELATIONSHIPS IN WHICH THE ALTERNATING relationships were like this?) PATTERN OCCURS AT LEAST TWICE Have you abruptly changed your sense of who you 3. Identity disturbance: markedly and persistently 0 0 0 are and where you are headed? (Give me some unstable self-image or sense of self examples of this. Does your sense of who you are often change dramatically? Tell me more about NOTE: DO NOT INCLUDE NORMAL that.) ADOLESCENT UNCERTAINTY Have there been lots of sudden changes in your CODE "3" IF ACKNOWLEDGES TRAIT goals, career plans, religious beliefs (and so on)? Have you often done things impulsively? (What 0

How about...

kinds of things?)

- ...buying things you couldn't afford?
- ...having sex with people you hardly knew, or "unsafe sex"?
- ...drinking too much or taking drugs?
- ...driving recklessly?
- ...uncontrollable eating?

4. Impulsivity in at least two areas that are potentially self-damaging (e.g., spending, sex, substance abuse, reckless driving, binge-eating)

1 2

NOTE: DO NOT INCLUDE SUICIDAL OR SELF-MUTILATING BEHAVIOR COVERED IN CRITERION (5)

IF CODED "3", GIVE SEVERAL EXAMPLES INDICATING A PATTERN OF IMPULSIVE BEHAVIOR (NOT LIMITED TO EXAMPLES

IF YES TO ANY OF THE ABOVE: Tell me about that. How often does it happen? What kinds of problems has it caused?

Do you get suspicious of other people or feel especially spaced out when you are under a lot of

GIVEN). THESE BEHAVIORS CANNOT OCCUR EXCLUSIVELY IN THE CONTEXT OF A MANIC, HYPOMANIC, OR MIXED EPISODE.

PATHOLOGICAL GAMBLING

General

Have you ever gambled? (Was there ever a period in your life when you gambled too much? Has gambling ever caused you problems? What problems did it cause? Has anyone ever objected to your gambling? Why?)

IF NO SUGGESTION THAT EVER GAMBLED EXCESSIVELY OR HAD GAMBLING RELATED PROBLEMS, IF NO SUGGESTION THAT EVER GAMBLED EXCESSIVELY OR HAD GAMBLING RELATED PROBLEMS,

CHECK HERE O

AND GO TO PYROMANIA M6

IF HAS ACKNOWLEDGED HAVING PROBLEMS: When in your life were you having the most problems because of your gambling? (How long did that period last?)

IF HAS NOT ACKNOWLEDGED HAVING GAMBLING PROBLEMS BUT GAMBLED EXCESSIVELY: When in your life were you gambling the most? (How long did that period last?)

PATHOLOGICAL GAMBLING CRITERIA

Now I'm going to ask you several questions about that time.

A. Persistent and recurrent maladaptive gambling behavior as indicated by five (or more) of the

following:

Did you ever experience frequent preoccupation with gambling, planning to gamble, or thinking about ways to get money with which to gamble?	1. Preoccupied with gambling (e.g. reliving past gambling experiences, handicapping or planning the next venture or thinking of ways to get money with which to gamble)	O ?	0	0 2	O 3
Did you find that you needed increasing amounts of money in order to achieve the desired excitement?	2. Needs to gamble with increasing amounts of money in order to achieve the desired excitement	?	O 1	O 2	O 3
Did you make repeated unsuccessful efforts to	Made repeated unsuccessful efforts to control,		0	0	0
control, cut back, or stop gambling?	cut back, or stop gambling	? 	1	2	3
Did you often experience restlessness or irritability when attempting to cut down or stop gambling?	Restless or irritable when attempting to cut down or stop gambling	O ?	O 1	O 2	O 3
Did you ever gamble as a way of escaping from your problems or to relieve feelings of helplessness, guilt, anxiety, or depression?	5. Gambles as a way of escaping from problems or relieving a dysphoric mood (e.g. feelings of helplessness, guilt, anxiety, or depression)	O ?	O 1	O 2	O 3
Did you ever, after losing money gambling, return another day to get even?	6. After losing money gambling, often returns another day to get even (chasing one's losses)	O ?	O 1	O 2	O 3

your gambling?	conceal the extent of involvement with gambling	? 1 2 3
Did you do something illegal such as forgery, fraud, theft, or embezzlement to finance your gambling?	Committed illegal acts such as forgery, fraud, theft, or embezzlement to finance gambling	O O O O ? 1 2 3
Did you ever jeopardize or lose a significant relationship, job, or educational or career opportunity because of gambling?	9. Jeopardized or lost a significant relationship, job, or educational or career opportunity because of gambling	O O O O ? 1 2 3
Did you rely on others to provide money to relieve a gambling debt?	10. Relies on others to provide money to relieve a desperate financial situation caused by gambling	O O O O ? 1 2 3
