Running title: Isoform-specific regulatory modes in NCX2 and NCX3

Supplementary figure legends

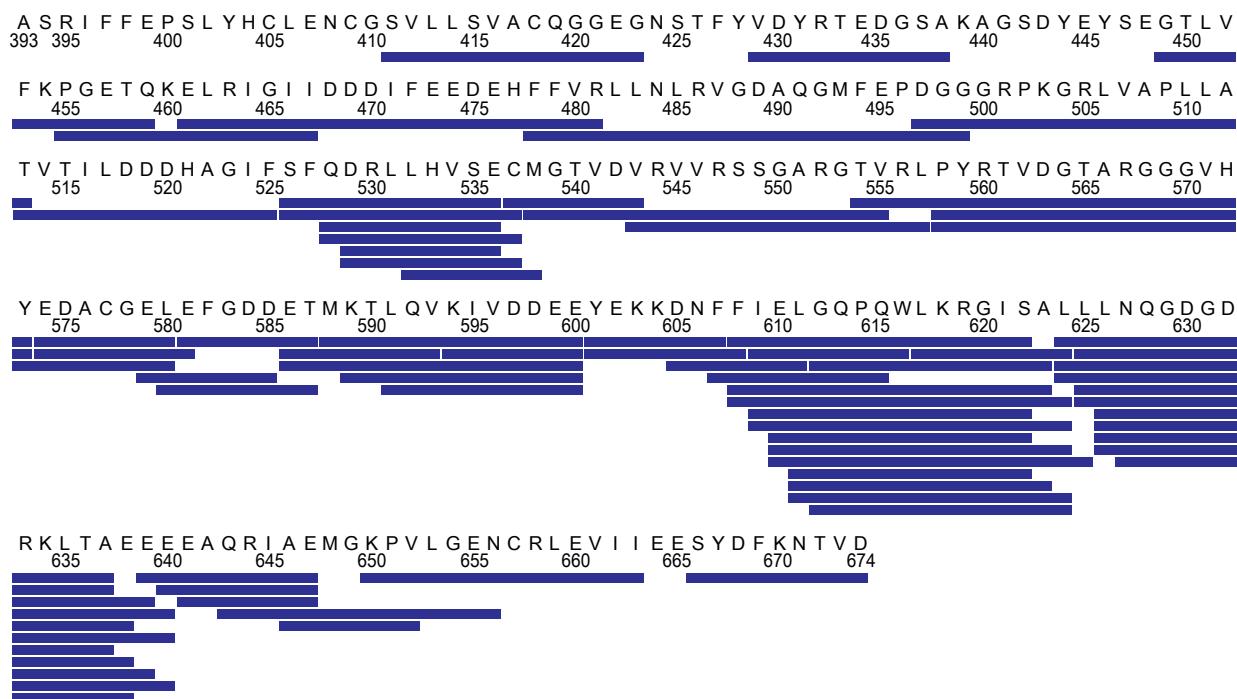

Figure S1. Sequence coverage of NCX2-CBD12 and NCX3-CBD12. (A) Peptic peptides of NCX2-CBD12 are displayed as blue bars. (B) Peptic peptides of NCX3-CBD12-AC are displayed as pink bars, peptic peptides of NCX3-CBD12-B are displayed as light-blue bars, and peptic peptides identical in both splice variants are displayed as blue bars.

Figure S2. HDX-MS profiles of NCX2-CBD12 and NCX3-CBD12. HDX-MS profiles of apo NCX2-CBD12 (A), Ca²⁺-bound NCX2-CBD12 (B), apo NCX3-CBD12-AC (C), Ca²⁺-bound NCX3-CBD12-AC (D), apo NCX3-CBD12-B (E), and Ca²⁺-bound NCX3-CBD12-B (F) at different deuterium uptake duration (as indicated) are overlaid on the models of the respective proteins.

Figure S3. HDX-MS uptake plots of NCX2-CBD12 and NCX3-CBD12. The uptake plots of selected peptides affected by Ca²⁺ binding in NCX2 (A), NCX3-AC (B), and NCX3-B (C) are displayed. * p < 0.05.
