Effect Tests					
Source	Nparm	DF	Sum of Squares	F Ratio	Prob>F
Ψ_S	1	1	155.91356	469.1518	<0.0001
Treatment	2	2	6.67009	10.0353	0.0003

Fig S3 Statistical comparison of the xylem vulnerability curves from the three acclimation treatments. The sigmoidal curves of well watered (WW), transient deficit (TD), and sustained deficit (SD) treatments from Fig. 3 were linearized and compared using a regression model with Ψ_s and the treatment as fixed model effects ($P<0.05$)
