

Figure S5. AHR and ARNT are upregulated by TCF21 overexpression

(A) RNA-Seq (FDR = 6.57×10^{-10}), and (B) qPCR (0.89 ± 0.06 vs. 1.29 ± 0.12 , $p=0.018$).

(C) ARNT is not significantly changed in TCF21 overexpression RNA-Seq, but (D) upregulation was confirmed with qPCR (0.95 ± 0.02 vs. 1.25 ± 0.02 , $p=0.0008$).
