

Supplementary Figure 1.

Supplementary Figure 1. Representative histogram plots of expression of EGFP in gene-modified Jurkat cell line (panels at left) and primary human T cells (panels at right), with lentiviral constructs carrying the promoters EFS (upper panels) or MNDU3 (lower panels). Dotted lines represent non-transduced cells; hairline non-tinted histograms represent cells transduced with lentiviral vectors at 10⁵ TU/mL; tinted histograms represent cells transduced with lentiviral vectors at 10⁷ TU/mL.
