Abbreviations

BP: blood pressure; Dx: diagnosis; HTN: hypertension; HDL-C: high density lipoprotein cholesterol; LDL-C: low density lipoprotein cholesterol; MI: past history of myocardial infarction; Rx: prescription; ACE: angiotensin converting enzyme inhibitor; ARB: angiotensin receptor blocker; HgbA1c: hemoglobin A1c

Note: When the number of subjects for the denominator of a given measure was < 10, or if sufficient lab data were not recorded to calculate the measure of interest, the data are not considered reliable and thus indicated by a dash in the above table.

* Improvement (end-of-study – baseline) in minority group was greater than that observed for all patients.
