^a Reference group is white patients

^b Time-dependent variable in which *no appropriate antibiotic therapy* is the reference

^c Reference group is patients with line-associated infections and line removal on day 0

^d Reference group is BSI from a urine/pyelonephritis source. The line BSI source data is not included due to collinearity between this covariate and other covariates included in the model.

Abbreviations: BSI, Bloodstream infection; CI, Confidence interval; MDR, multidrug resistant
