Figure EV1. Mis18BP1 amino acid conservation and Mis18 complex formation with the well conserved Mis18BP1 N-terminal region (amino acids 20–130) *in vivo*.

- A Alignments include *Homo sapiens* (*hs*), *Mus musculus* (*mm*), *Bos taurus* (*bt*), *Gallus gallus* (*gg*), and *Xenopus tropicalis* (*xt*). Black boxes indicate SANTA and SANT domains, respectively. Multiple sequence alignment (conservation score is mapped from red to cyan, where red corresponds to highly conserved and cyan to poorly conserved) was performed with MUSCLE (MUltiple Sequence Comparison by Log-Expectation, EMBL-EBI) [31] and edited with Aline (sequence alignment editor) [32].
- B Representative images (left) and quantification (right) for the recruitment of mCherry-Mis18BP1_{20–130} and mCerulean-Mis18 β to the alpheid^{tetO} array in HeLa 3–8 cells expressing TetR-eYFP-Mis18 α_{wt} . Middle bars show median whilst error bars show SEM. Mann–Whitney test vs. TetR-eYFP; $P \leq 0.0001$, $n \geq 63$. Scale bar, 5 μ m.

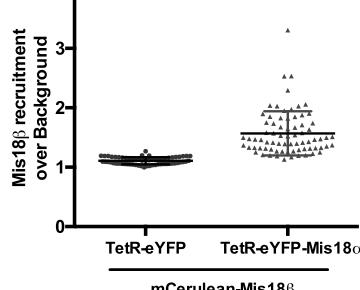

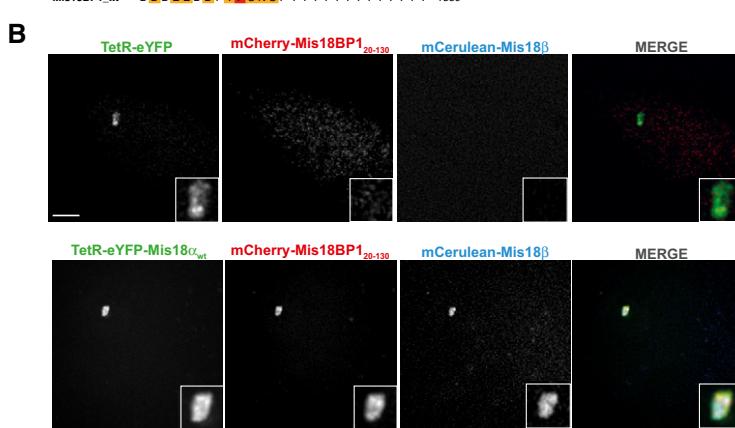

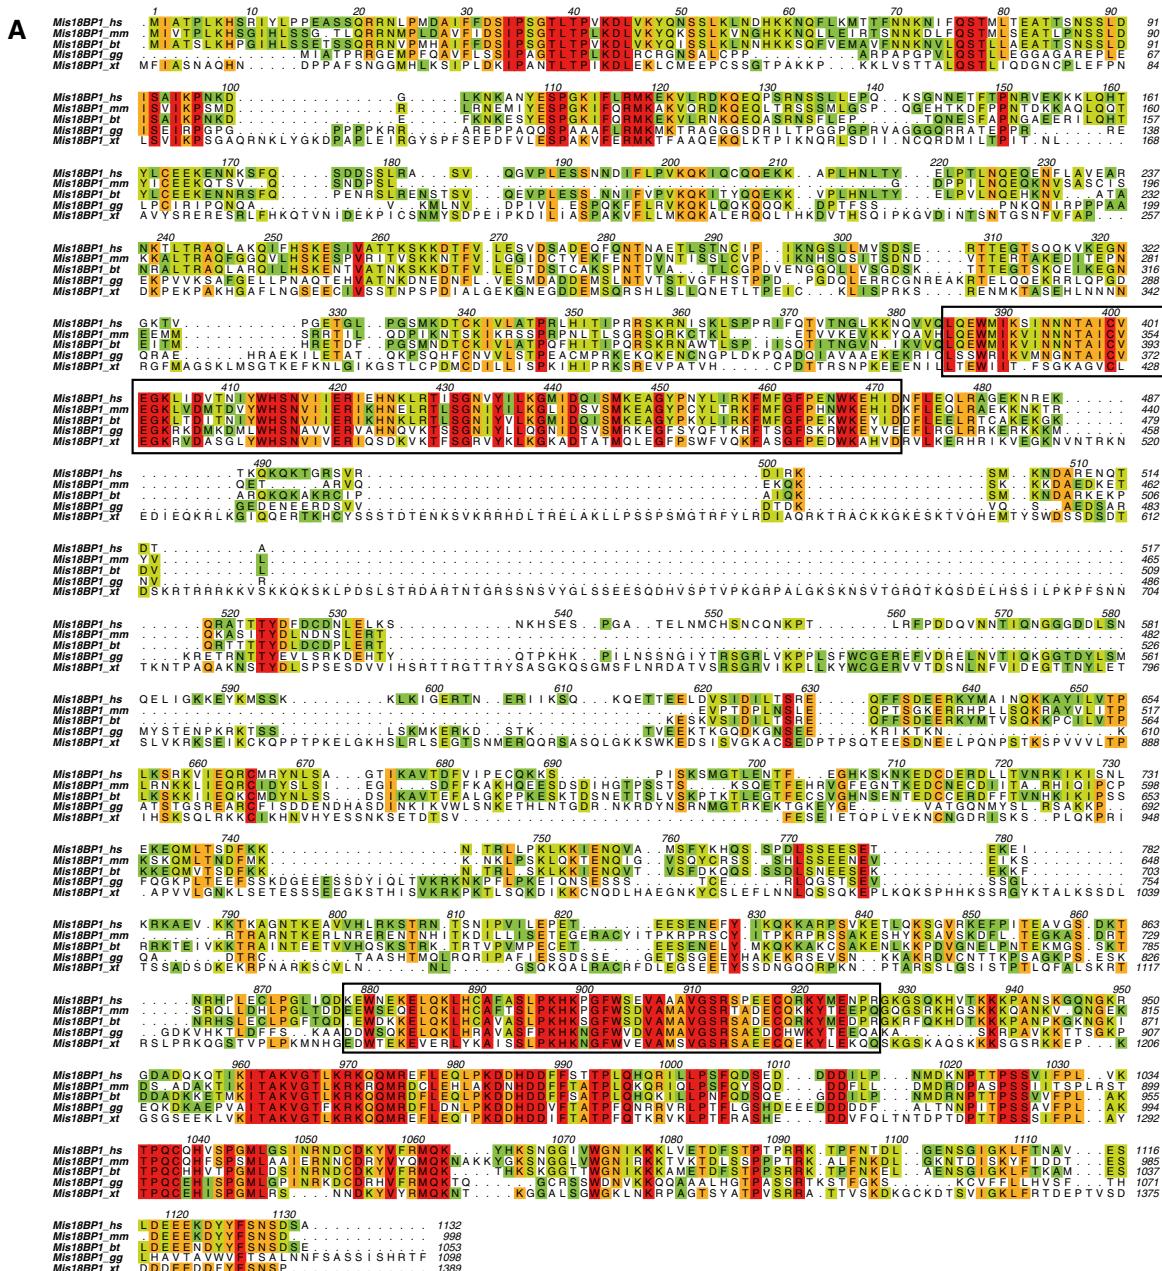

Figure EV1.

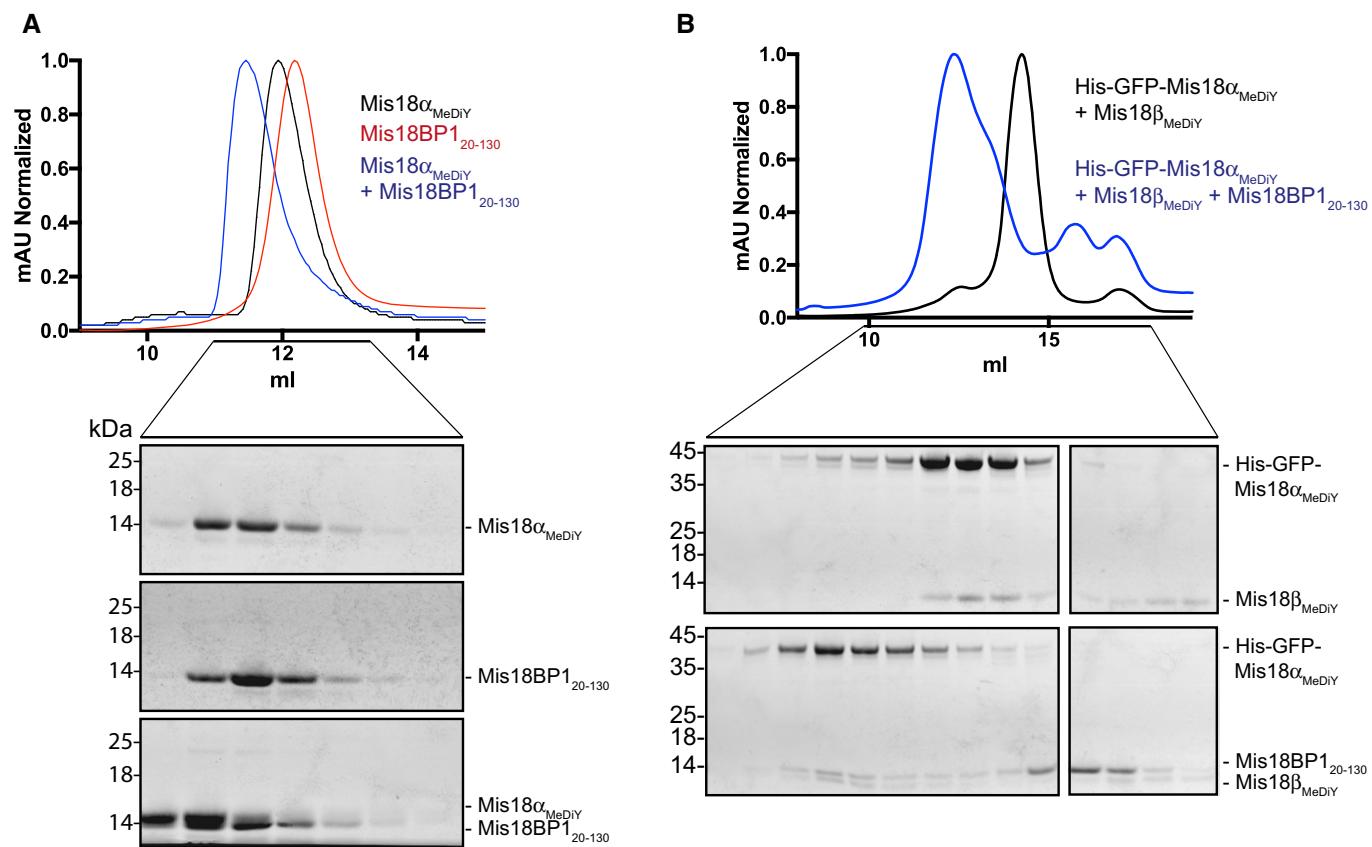

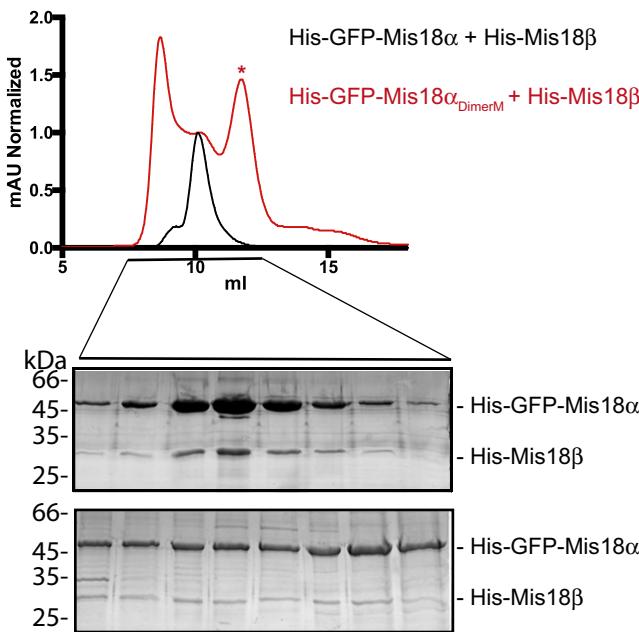

Figure EV2. Mis18 α_{MeDIY} can directly interact with Mis18BP1₂₀₋₁₃₀.

A, B SEC profiles and respective SDS-PAGE analyses of (A) Mis18 α_{MeDIY} , Mis18BP1₂₀₋₁₃₀, and Mis18 α_{MeDIY} mixed with two times molar excess of Mis18BP1₂₀₋₁₃₀. Mis18 α_{MeDIY} elutes at 11.9 ml while Mis18 α_{MeDIY} /Mis18BP1₂₀₋₁₃₀ elutes at 11.5 ml. Proteins were separated using a Superdex 75 10/300 column and (B) His-GFP-Mis18 α_{MeDIY} /Mis18 β_{MeDIY} and His-GFP-Mis18 α_{MeDIY} /Mis18 β_{MeDIY} mixed with two times molar excess of Mis18BP1₂₀₋₁₃₀ elutes at 14.3 ml and 12.4 ml, respectively. Proteins were analyzed using a Superdex 200 increase 10/300 column.

Figure EV3. Predicted molecular weights for Mis18 complexes with different subunit stoichiometry.

A–F Predicted MWs of (A) Mis18 α/β , (B) His-GFP-Mis18 α/β , (C) His-Mis18 α/β , (D) His-GFP-Mis18 $\alpha_{C\text{-term}}/\beta_{C\text{-term}}$, (E) Mis18 $\alpha/\beta/Mis18BP1_{20-130}$, (F) Mis18 $\alpha/\beta/His\text{-Sumo}\text{-}Mis18BP1_{20-130}$ complexes with different subunit compositions. These values together with the measured MWs from SEC-MALS analysis shown in Fig 3 were used to deduce the correct subunit composition.

**Figure EV4.** Characterization of Mis18 $\alpha_{DimerM}/Mis18\beta$.

SEC profiles and SDS-PAGE analyses of His-GFP-Mis18 α/β and His-GFP-Mis18 α_{DimerM}/β complexes. SEC analyses were carried out using a Superdex 200 increase 10/300 column. Sample used for SEC-MALS is indicated with an asterisk (*).

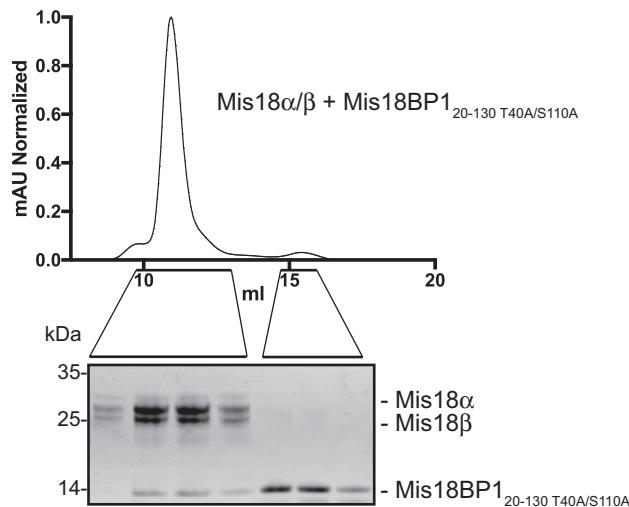

Figure EV5. Mis18BP1₂₀₋₁₃₀ T40A/S110A binds Mis18 α / β in vitro.

SEC profile and respective SDS-PAGE analysis of Mis18 α / β mixed with two times molar excess of Cdk1 non-phosphorylatable mutant, Mis18BP1₂₀₋₁₃₀ T40A/S110A. SEC run was carried out using a Superdex 200 increase 10/300 column.
