

SUPPLEMENTARY FIG. S13. Representative unedited Western blot images. (A) RAW 264.7 macrophages were incubated with vehicle or TSP1 (10 nM) for 1, 4, 8, 16, or 24 h. ACAT protein expression was determined by Western blot. Representative of $n=3$ experiments. (B) WT, Nox1^{+/+}, and CD47^{-/-} bone marrow-derived macrophages were incubated with vehicle or TSP1 and processed *via* Western blot for p-cofilin (Ser-3), total cofilin, and β -actin expression. Representative of $n=3$ experiments. (C) Macrophages were treated as described in (A). Syndecan-1 expression was determined by Western blot. Representative of $n=3$ experiments. Nox, NADPH oxidase.
