

Supplementary Figure S2

Supplementary Figure S2 Effects of NMS on chick rectum contraction and rat systemic blood pressure compared with the effects of NMU. (**A, B**) The contractility of chick rectum. NMS (**A**) and NMU (**B**) were added to the bath at the indicated concentrations. Each arrow indicates the time of sample addition. (**C, D**) Rat systemic blood pressure. The indicated amounts of NMS (**C**) and NMU (**D**) were administered to rats at the time indicated by the arrow. Both assays were performed as described in "Supplementary materials and methods."
