

A**B**

*: missense or nonsense mutation, ⊤: frameshift mutation caused by 1 bp deletion

†: frameshift mutation caused by 1 bp insertion, ▼: frameshift mutation caused by large deletion or duplication

Supplementary Figure 1. The mutation sites of 33 *xrs2* mutants that were isolated by primary screening for senescence phenotype in a *mec1 sml1 hdl1* background. (A) Mutants that are resistant to MMS and HU. (B) Mutants that are sensitive to them. Numbers beside gray bars indicate amino acid residues just before nonsense or frameshift mutations. The positions of mutation sites are indicated at right side. Amino acids in parentheses indicate translated sequences following frameshift mutations.
