

Site of interest	Targeted loci in the mouse genome	Targeted genomic sites
CTCF binding site	 	D-2 D-3 D-4(1), D-4(2) D-1/3/4 D-1/2/3/4 D-1/2/3/4/5  E-1 E-2 E-3 E-4 E-5
NFIB binding site		F

**Supplementary Figure 1** Schematic diagram of CTCF and NFIB binding sites targeted by CRISPR/Cas9. Five CTCF binding sites in *Wap* locus (D), five CTCF sites in *Csn* locus (D) and one NFIB binding site in *Csn* locus (E) were targeted. The five sites in *Wap* locus were targeted separately or in combination as illustrated on the right panel. CTCF and NFIB binding sites in *Csn* locus were separately targeted. Arrowheads indicate the coding genes. The genomic coordinates and the distances of target sites to the respective gene are also shown.

**Supplementary Figure 2** Comparison of asymmetric deletions between a prior study (PMID 24253447) and the current study. (a) Frequency of asymmetric deletions observed in a prior study and the current study. Deletion sequences were obtained from the founder sequences of prior study (Supplementary Table 3 and 4)<sup>1</sup> and the current study. Subsequently, asymmetric deletions were examined with two cutoffs, 1)  $\geq 1.5$ -fold difference between the upstream and downstream of Cas9 cutting site and 2)  $\geq 2$ -fold difference between each side. The frequency of asymmetric deletions was prevalent in both studies (1.5-fold cutoff: 89% vs 82%, 2-fold cutoff: 82% vs 73%). In a prior study, deletion sequences of total 84 founders from two targeted genomic sites were analyzed. In the current study, deletion sequences of total 139 founders from nine targeted genomic sites were analyzed. Only deletions obtained from a single sgRNA injection were analyzed to avoid the effect of multiple variables. Deletions obtained from a single sgRNA injection in a prior study, Deletions targeting *Foxn1* and *Prkdc*; Deletions obtained from a single sgRNA injection in the current study, Deletions targeting TF binding site B, C-1, C-2/3, D-2, D-3, D-4(1), and F. (b) Deletion sizes of asymmetric deletions (1.5-fold cutoff) obtained from a prior study and the current study. Although the median deletion size of asymmetric deletions from the current study (10 bp) was similar to that from a prior study (11.5 bp), the top 50% of asymmetric deletion sizes was bigger in the current study (up to 600 bp). Median, middle bar inside the box; IQR, 50% of the data; whiskers, 1.5 times the IQR.

**Supplementary Figure 3** Frequency of single sgRNA-imposed deletions found at repeat sequences. More than 80% of deletions were found at the repeat sequences with a single sgRNA targeting the genomic site C-2 in mice carrying a C-3 deletion (C-2/3). B #1,  $n=8$ ; B #2,  $n=10$ ; C-1 #1,  $n=6$ ; C-1 #2,  $n=7$ ; C-2/3,  $n=12$ , D-2,  $n=40$ ; D-3,  $n=12$ ; D-4(1),  $n=17$ ; F,  $n=10$ .

*Repeat sequences align at one end*

Deletion 5' -AAGTATGTTAAGT**CTACC**ACAGACTGAGTTACT-3'  
 3' -TTCATACAATTCA**GATGG**TGTCTGACTCAATGA-5'

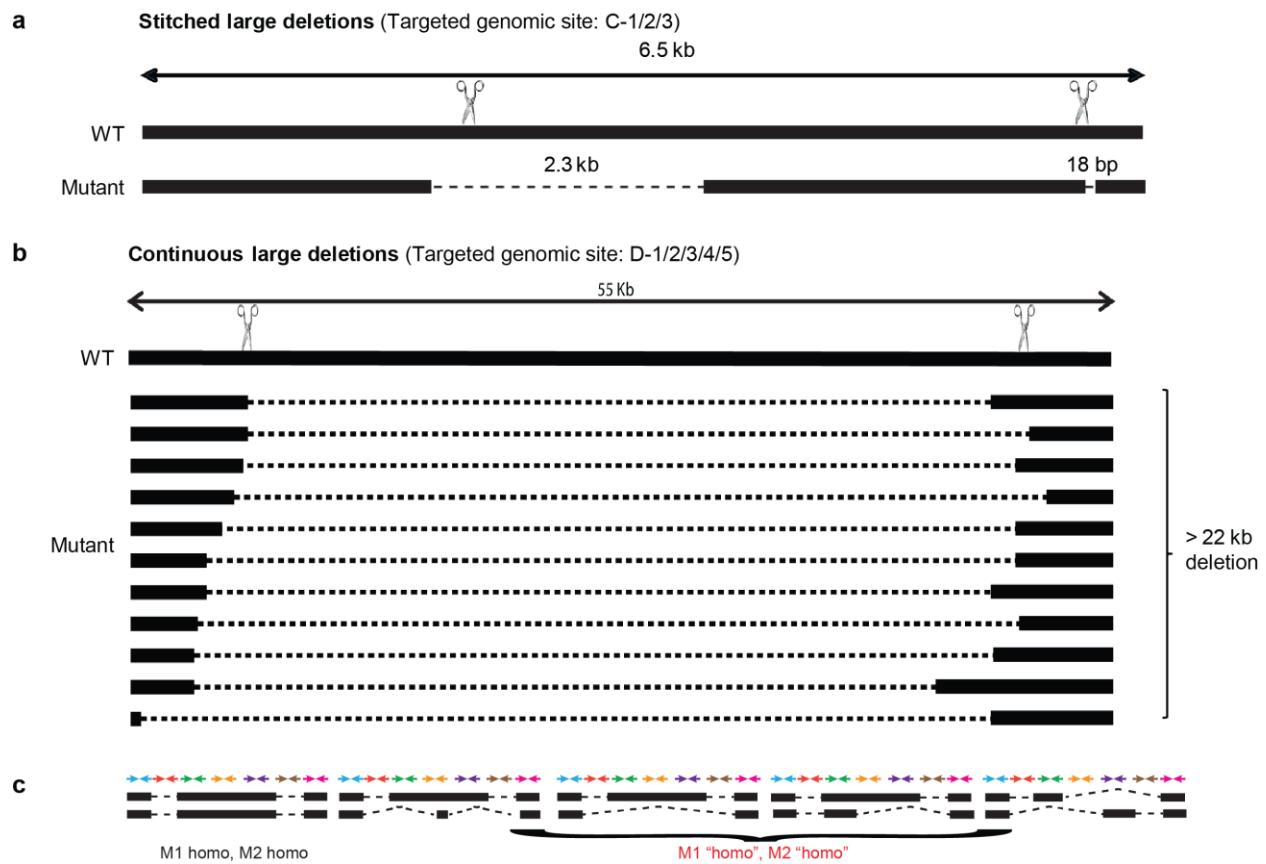

**Supplementary Figure 4** Flow of proposed mechanism that can create repeat sequences aligned at one end. After Cas9 creates the blunt end cut 3 bp upstream of the PAM sequence, 5' to 3' exonucleases generate a deletion toward 3' direction. Complementary repeat sequences generate the base pairing and DNA polymerase fills in the gap. Only a single unit of repeat sequence is retained.

**Supplementary Figure 5** Deletion sizes obtained from founders that were targeted at genomic site D-3 with a single sgRNA. More than 80% of deletions were larger than the average deletion size (49 bp). Among them, approximately 40% of deletions exceeded 200 bp.

**Supplementary Figure 6** Deletion sizes in relation to the GC content of sgRNAs and the distances between sgRNAs. (a) Scatterplot showing the deletion sizes dependent on the GC content of sgRNAs from injection of single sgRNAs. (b) A scatterplot depicting the deletion sizes dependent on the distances between each sgRNAs from co-injection of more than one sgRNAs targeting a single site.

**Supplementary Figure 7** Representative examples of large deletions obtained from the simultaneous injection of four sgRNAs corresponding to two distant sites and the strategy to identify compound large deletions. (a) Stitched large deletions in mice from site C-1/2/3. (b) Continuous large deletions in mice from site D-1/2/3/4/5. (c) Diagram depicting the genotyping method used to identify compound large deletions. Serial primers spanning the target region were used for the PCR genotyping.

**Supplementary Table 1 List of studies on CRISPR/Cas9 genome editing in the mouse germline and studies with microhomology-based deletions**

1. Deletion at repeat sequences

PMID	System ( <i>in vivo</i> mouse or <i>in vitro</i> cell culture)	Deletion at repeat sequences: Repeat sequences aligned at 1) one end (or microhomology-mediated end joining) 2) both ends
Current study	<i>in vivo</i> mouse	1, 2

**Supplementary Table 2. Summary of embryo microinjection of sgRNAs and Cas9 mRNA**

1. Targeting individual genomic sites with single sgRNAs

Targeting strategies	Targeted genomic sites	sgRNA	Embryos injected	Pups born	Frequency of mutations (%)
One-step	B	1	36	18	44
		2	176	55	31
	C-1	1	150	14	79
		2	93	13	62
	D-2	1	150	57	84
	D-3	1	101	31	39
	D-4 (1)	1	27	43	53
F	1	191	40		25
Two-step	C-2/3	1 (targeting site 2 in site C-3 mutants)	68	20	60

2. Targeting individual genomic sites with more than one sgRNA

Targeting strategies	Targeted genomic sites	sgRNA	Embryos injected	Pups born	Frequency of mutations (%)
One-step	A	1, 2	183	46	33
	C-1/3	1, 2	15	6	100
	D-4 (2)	1, 2	84	17	100
	E1	1, 2	75	75	9
	E2	1, 2	50	50	14
	E3	1, 2, 3	41	41	41
	E4	1, 2, 3	32	12	92
	E5	1, 2, 3	80	30	100
Two-step	D-1/2/3/4	1, 2 (targeting site 2 in site C-1/3/4 mutants)	38	4	50

3. Targeting more than one genomic site with several sgRNAs

Targeting strategies	Targeted genomic sites	sgRNA	Embryos injected	Pups born	Frequency of mutations (%)
One-step	D-1/3/4	1, 2, 3, 4	78	27	7
Two-step	C-1/2, C-1/2/3	1, 2, 3, 4 (targeting site 2 and 3 in site C-1 mutants)	90	23	91
	D-1/2/3/4/5	1, 2, 3, 4 (targeting site 2 and 5 in site D-1/3/4 mutants)	27	10	100

**Supplementary Table 3. Frequency of insertions found in each targeted site**

1. Targeting individual genomic sites with single sgRNAs

Targeting strategies	Targeted genomic sites	sgRNA	Insertion	Total founders	Insertion frequency (%)
One-step	B	1	0	18	0
		2	1	55	2
	C-1	1	1	14	7
		2	0	13	0
	D-2	1	12	57	21
	D-3	1	0	31	0
	D-4 (1)	1	2	43	5
F	1	0	40	0	0
Two-step	C-2/3	1 (targeting site 2 in site C-3 mutants)	0	20	0
	Average				4

2. Targeting individual genomic sites with more than one sgRNA

Targeting strategies	Targeted genomic sites	sgRNA	Insertion	Total founders	Insertion frequency (%)
One-step	A	1, 2	4	46	9
	C-1/3	1, 2	4	6	67
	D-4 (2)	1, 2	0	17	0
	E-1	1, 2	1	75	1
	E-2	1, 2	0	50	0
	E-3	1, 2, 3	0	41	0
	E-4	1, 2, 3	1	12	8
	E-5	1, 2, 3	1	30	3
Two-step	D-1/2/3/4	1, 2 (targeting site 2 in site C-1/3/4 mutants)	0	4	0
	Average				10

3. Targeting more than one genomic site with several sgRNAs

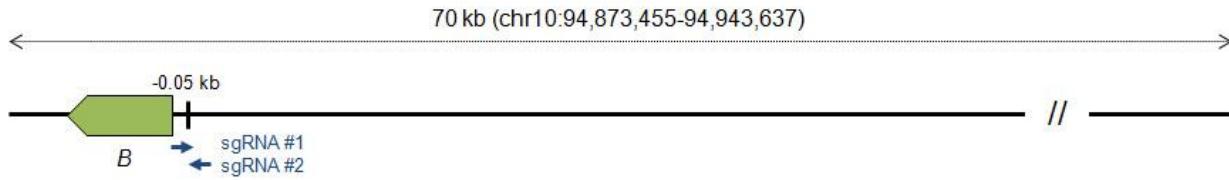

Targeting strategies	Targeted genomic sites	sgRNA	Insertion	Total founders	Insertion frequency (%)
One-step	D-1/3/4	1, 2, 3, 4	0	27	0
Two-step	C-1/2, C-1/2/3	1, 2, 3, 4 (targeting site 2 and 3 in site C-1 mutants)	4	23	17
	D-1/2/3/4/5	1, 2, 3, 4 (targeting site 2 and 5 in site D-1/3/4 mutants)	0	10	0
	Average				6

**Supplementary Table 4. Frequency of misleading genotypes linked to large deletions**

Targeted genomic sites	Mosaic large deletions (%)	Founders w/ deletion	Founders w/ mosaic large deletions	Number of alleles	Deletion size (bp)
C-1/2/3	10	20	2	2 3	10/ 338(w/ +800 bp) 6/ 446/ 2,300
