

S3 Figure: Expression change in a sample strain containing a whole gene duplication of *GE26133* (reference FPKM=22.0725, sample FPKM=58.6217, uncorrected $P = 0.00263417$, corrected $P = 0.0420917$). The tandem duplication also captures the entire gene sequence of *GE26134*, as well as portions of *GE26132* and *GE24588*. The duplicate exhibits greater than two-fold expression of *GE26133* in the sample strain containing the duplication. It is unclear whether the expression change is a direct consequence of duplication, secondary mutation, environmental effects, or other stochastic variation in expression.
