

Supplementary Fig. 1. Primer sequences for RT-PCR

Supplementary Fig. 1. Primer sequences for RT-PCR

#	Primer	Sequence (5'-3')
1	L1CAM-F	CAGATCCCCGAGGAAGAGGGAGTGCCTGGCCACCCC
2	L1CAM-R	CTCCCCCTCGAGGAGCCTCACGCGGCCTGTGCCATTGGTCTT
3	GAPDH-F	ATGAACTTTCTGCTCTCTGG
4	GAPDH-R	TCATCTCTCCTATGTGCTGGC

Supplementary Fig. 2.

Supplementary Fig. 2. Wound healing assay for L1CAM-depleted and control cells in media supplemented with 10% FBS. Photographs were taken immediately after wound induction and then 6 h later (left panel). Cell migration was quantified by measuring the distance between the cellular leading edge on either side of the scratch, plotted as a percentage relative to the zero time point (right panel). Results are representative of three independent experiments. Data are expressed as the mean \pm SD (** $p < 0.01$).
