

Supplementary Figure 5:

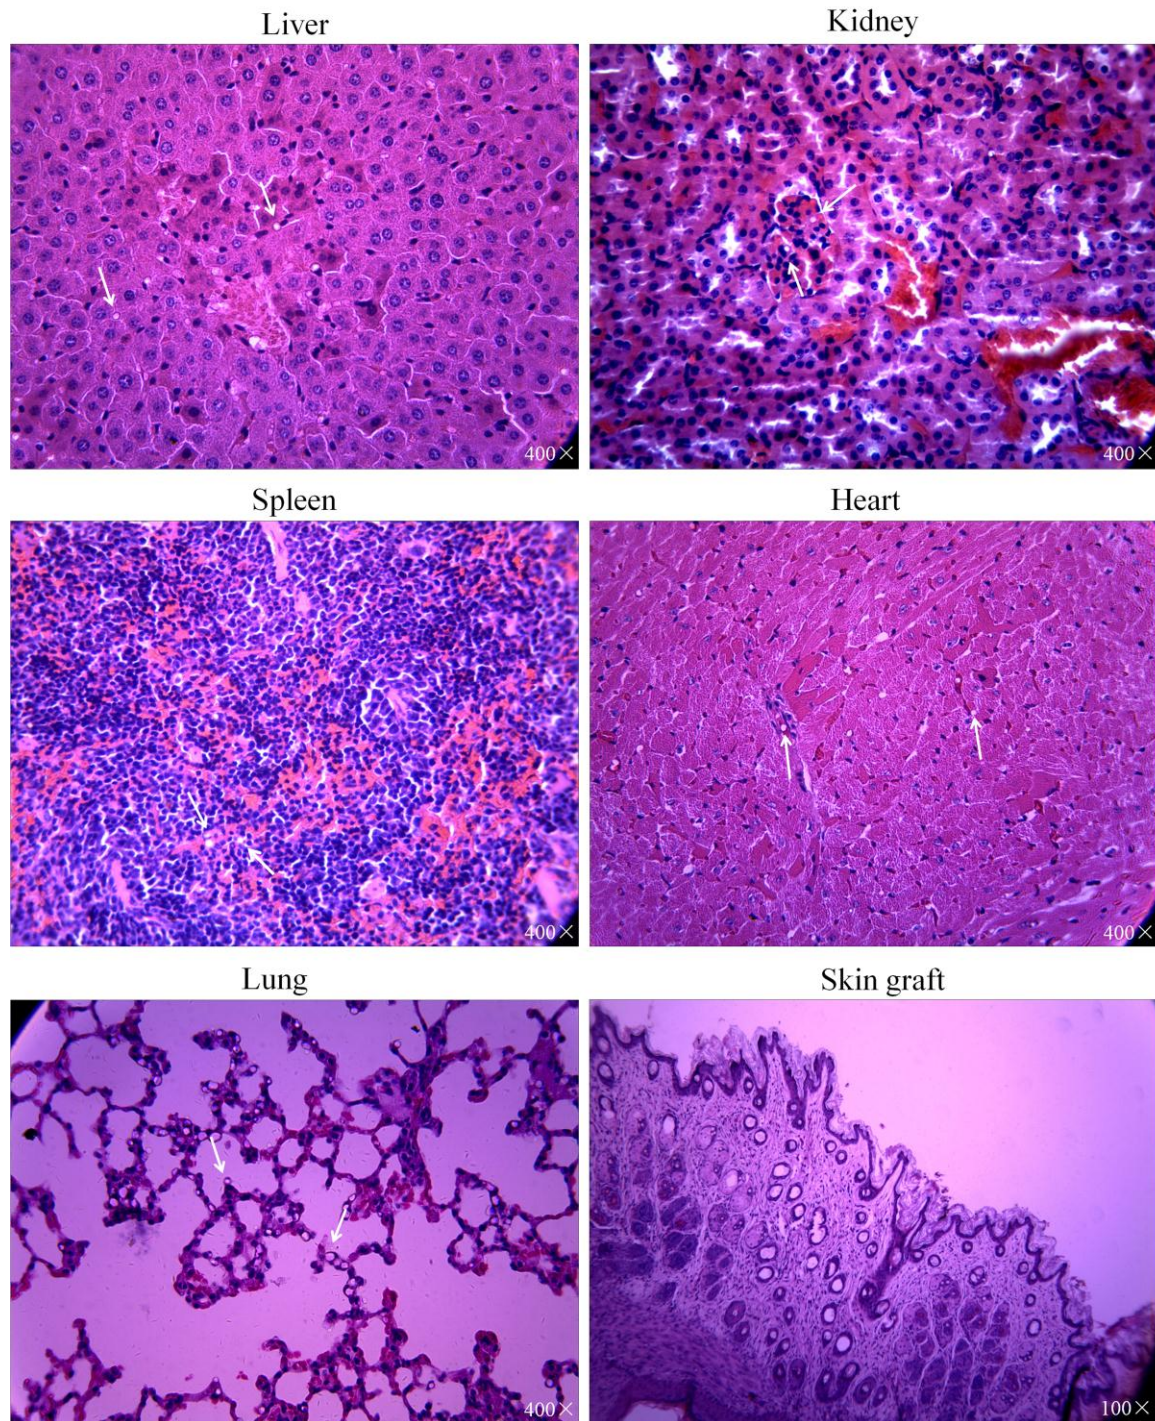

Fig. S5 Presence of KaAPCs in liver, kidney, spleen, lung, and heart, but not skin graft. The KaAPCs were injected via the tail vein into the grafted bm1 mice on day 9 after skin transplantation. At 1 hr after injection, various organs and the full-thickness alloskin graft were dissected and sections were prepared with the thickness of 6 μ m followed by H&E staining. Finally, the KaAPCs were visualized under optical microscope.
