Figure S2. T_{reg} cell subset frequency in PB

PB lymphocytes isolated from lean (Nw), obese (Ob), lean affected by CRC (Nw/CC) and obese affected by CRC (Ob/CC) donors were analyzed by flow cytometry. Frequencies of aT_{reg} cells, (CD4+FOXP3highCD45RA-), rT_{reg} cells (CD4+FOXP3lowCD45RA+) and nsT_{reg} cells, (CD4+FOXP3lowCD45RA-) were estimated among CD4+ T cells. Data are expressed as mean ± SEM. *$p < 0.05$ by ANOVA.
