

**Distribution of the over-represented stalling motifs in *USRs* and in the proteome. (A,C)**

The number of occurrences of each motif in the real *USR* (black) versus the mean and standard deviation of the number of occurrences in the randomized versions (white). (B,D)

The number of occurrences of each motif in the real proteome (black) versus the mean and standard deviation of the number of occurrences in the randomized versions (white).
