Snp/Indel Consequences:

- X Missense variant
- X TF binding site variant
- * Multiple consequences

Base Calling examples:

- ↑ High confidence call
- ↑ Low confidence call
- High confidence reference (SNP)
- ~ Low confidence reference (SNP)
- Genotype not called

Figure S1. SNPs in Oas1b founders. A list of known single nucleotide polymorphisms found in the Oas1b region of chromosome 5. The table indicates which region had a variant and which of the eight founder strains contains that variant. Found with the Sanger SNP viewer: (https://www.sanger.ac.uk/sanger/Mouse_SnpViewer), (Keane et al., 2011).,

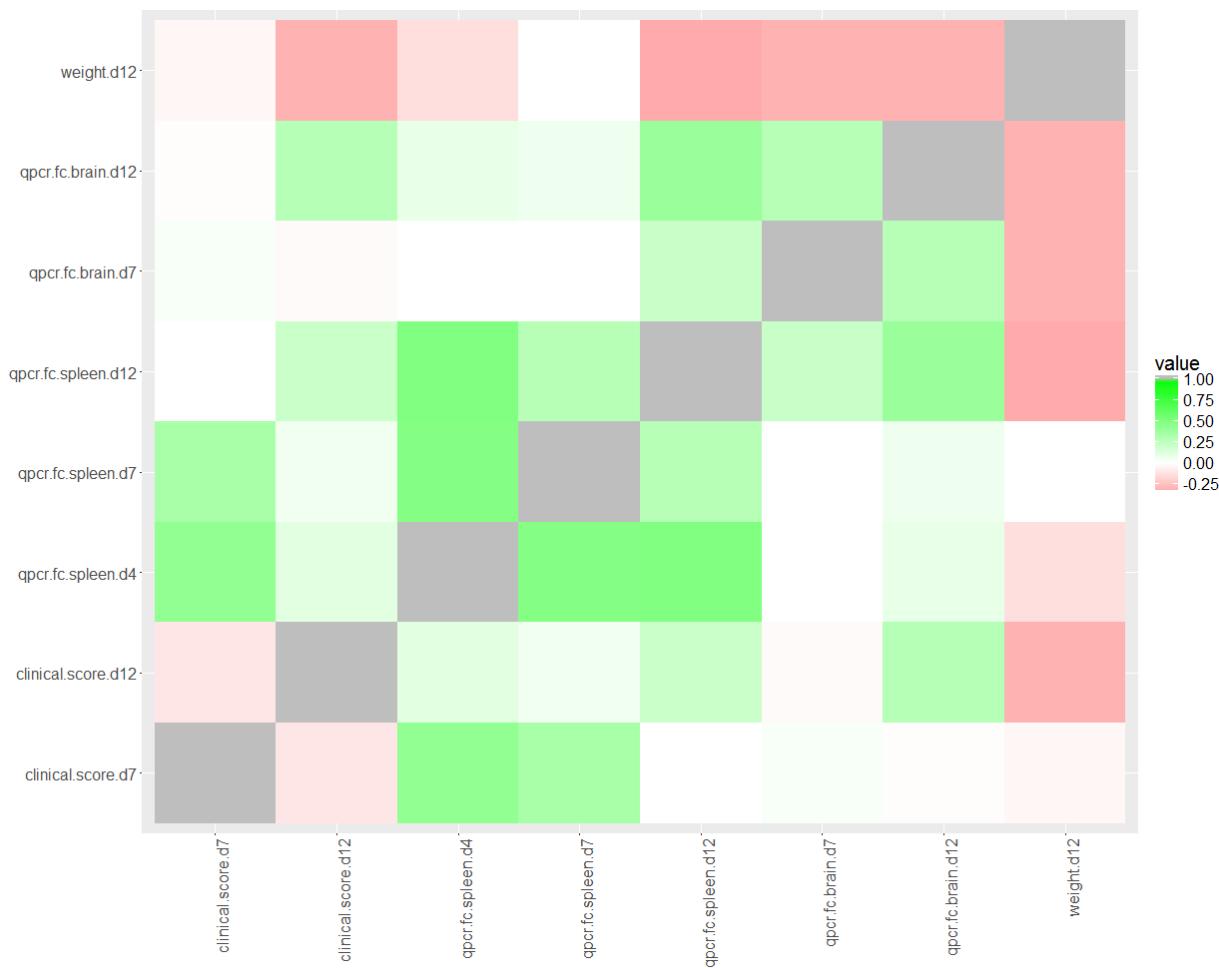

Figure S2. Correlation heat map of phenotypes

The heatmap shows the Pearson correlation scores representing relationships between phenotypes (clinical score, qPCR, and weight loss at day 12 post infection), with phenotypes represented on the X and Y axes. The green scale represents the value of positive correlation between phenotypes. The red scale represents negative correlation.

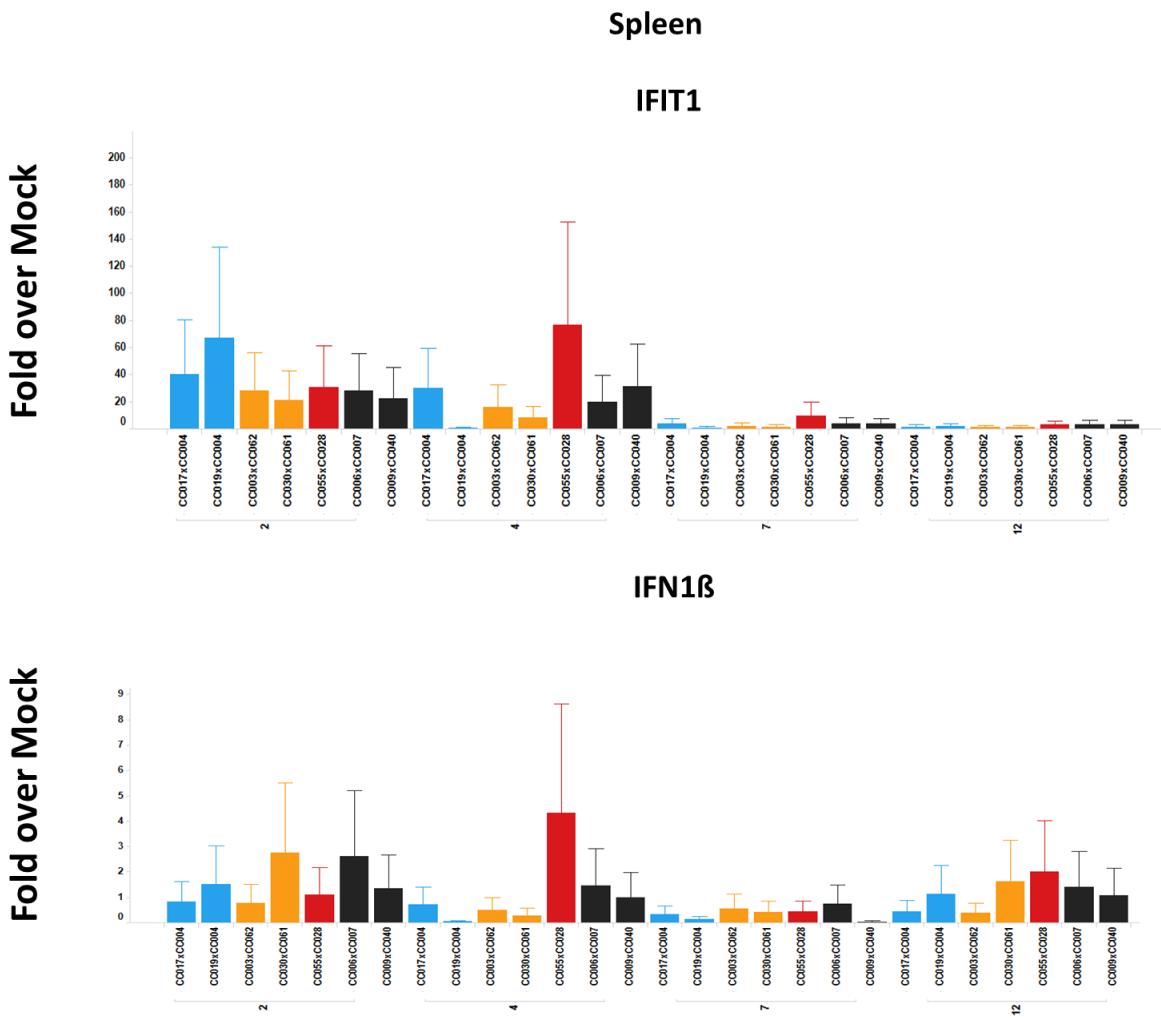

Figure S3. qPCR for IFIT1 and IFNb1 in the spleen

The y-axis shows fold change over mock averaged over each RIX background and the x-axis shows CC line IDs followed by days' post infection (2, 4, 7). Each color represents a different Oas1b designation. Blue=F/F, Orange=F/N, Red=N/F, Black=N/N.

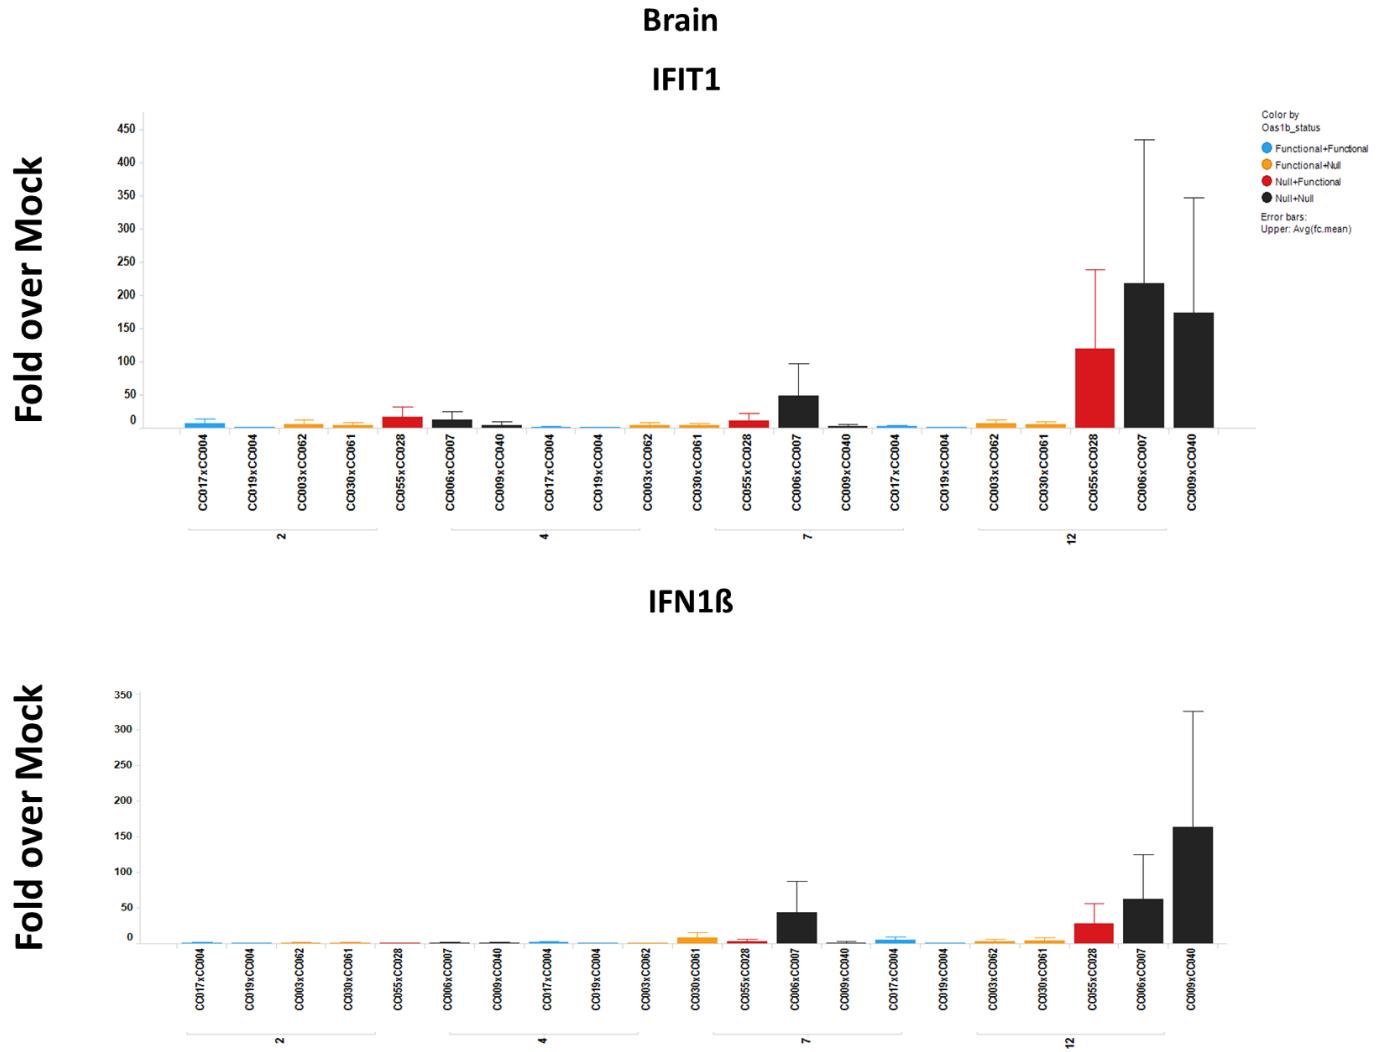

Figure S4. qPCR for IFIT1 and IFNb1 in the brain

The y-axis shows fold change over mock in the RIX lines selected for transcriptomics. The x-axis shows CC line IDs followed by days' post infection (2, 4, 7). Each color represents a different Oas1b designation. Blue=F/F, Orange=F/N, Red=N/F, Black=N/N.

CC(055x028)/F1

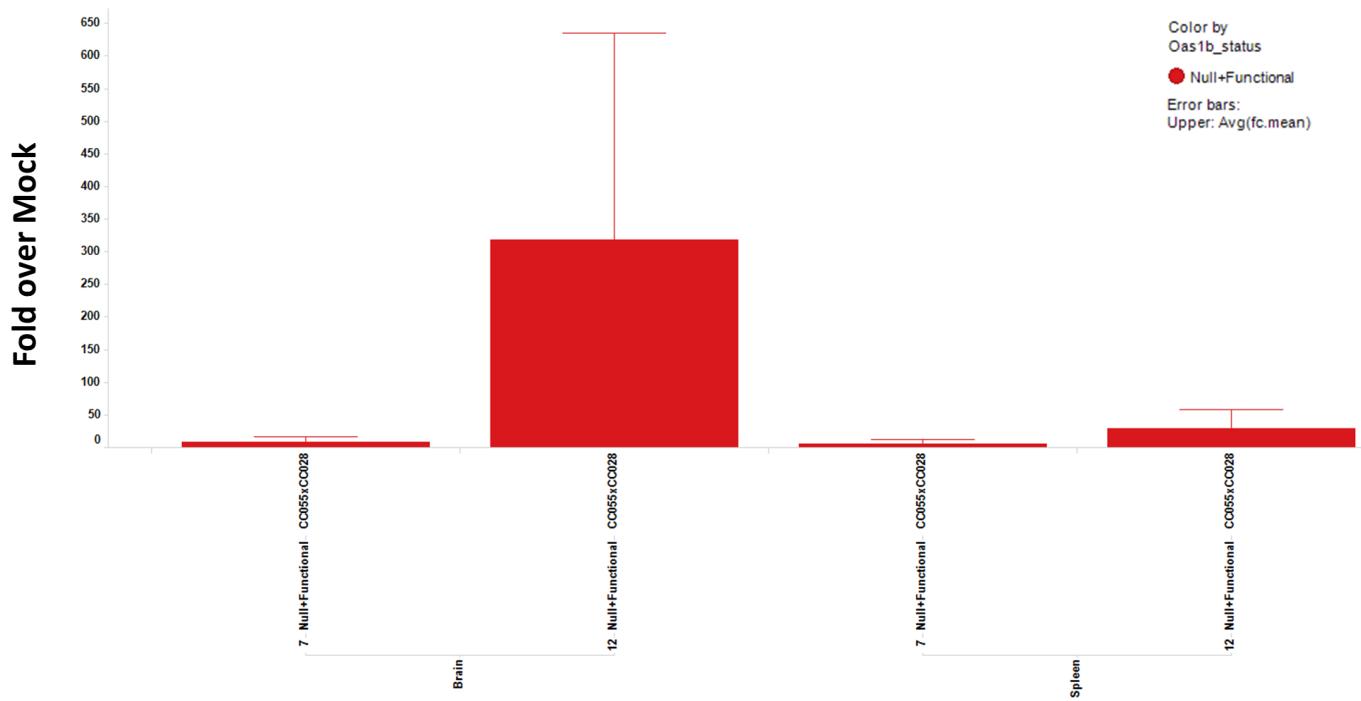

Figure S5. qPCR of WNV in CC(055x028)/F1 at days' 7 and 12 in the brain and spleen.

The y-axis shows fold change over mock for RIX CC(055x028)/F1. The x-axis shows days' post infection (2, ,4 ,7). The top part of the figure is spleen and the lower part is brain. The color here represents its haplotype (Red=N/F).

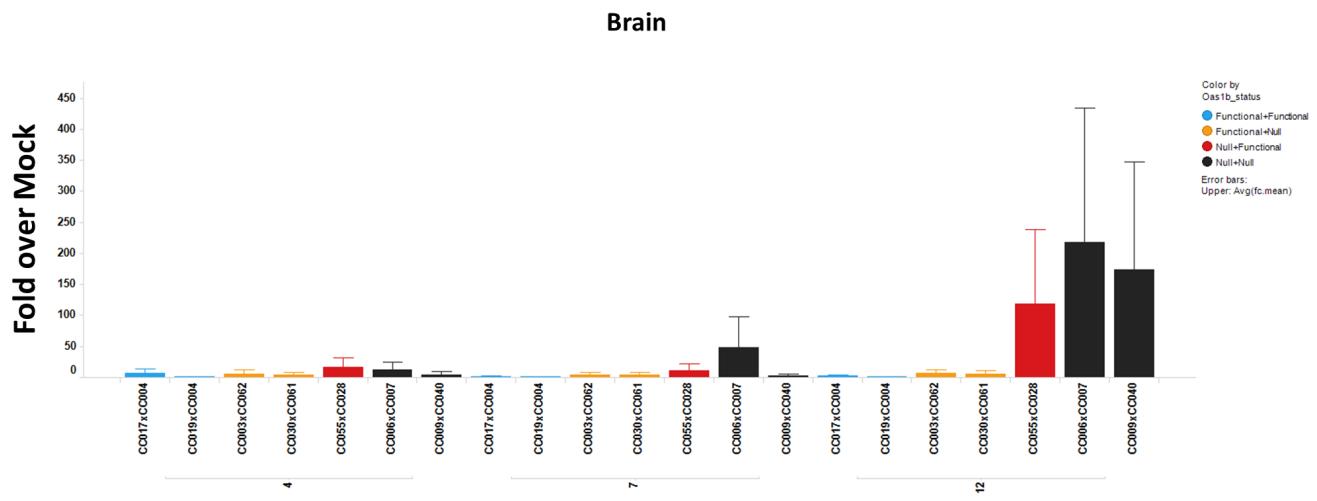

Figure S6. qPCR of WNV in the brain of selected CC RIX lines at day 4, 7, and 12 post infection

The y-axis shows fold change over mock in the RIX lines selected for transcriptomics. The x-axis shows days' post infection (4, 7, 12). Each color represents a different Oas1b designation. Blue=F/F, Orange=F/N, Red=N/F, Black=N/N.
