Supplemental figures and tables

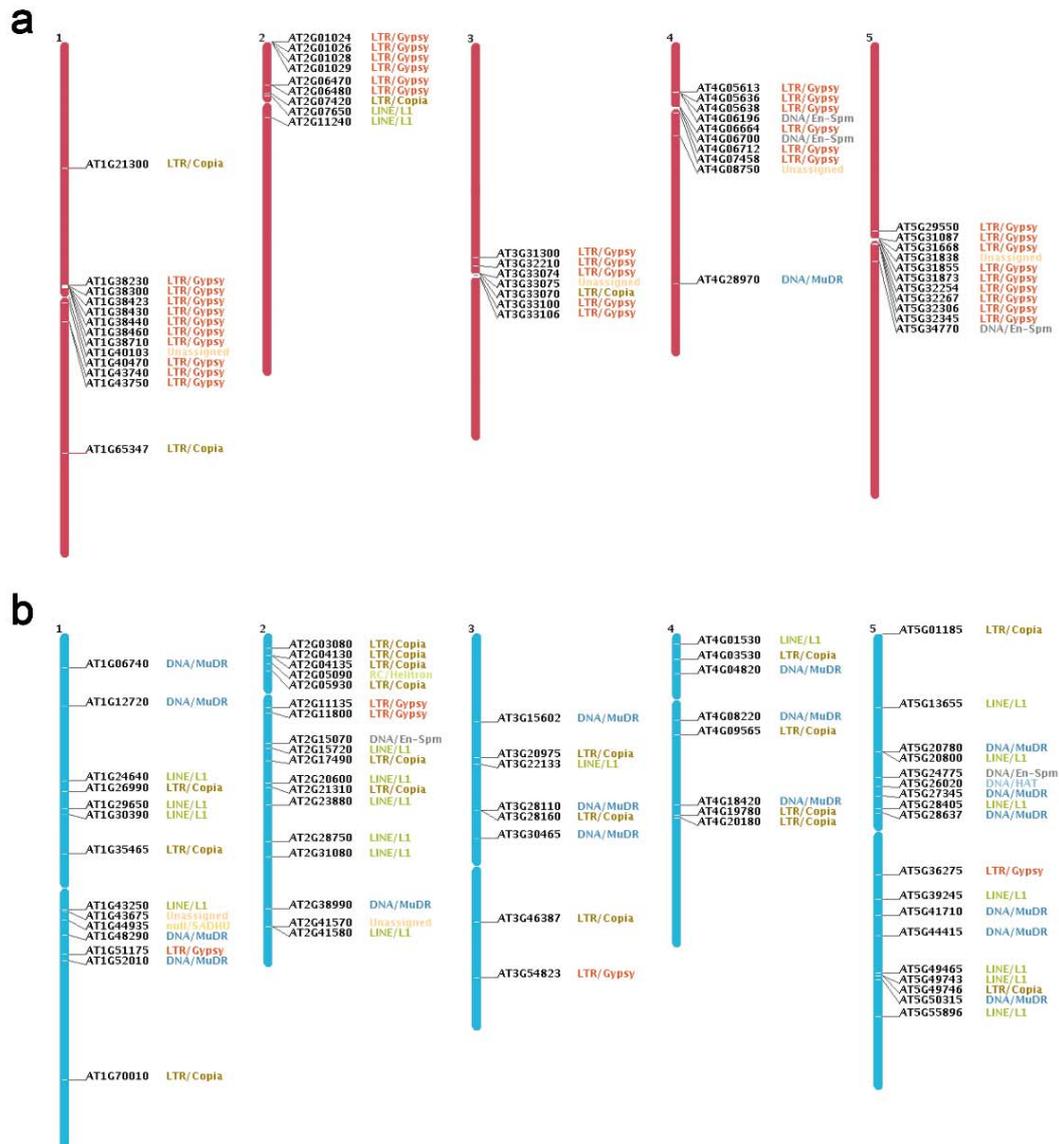

Supplementary Figure 1 | Venn diagrams of gene expression data between different days of extended dark treatment. (a) The 1-day and 5-day dark treatment measured by ATH1 GeneChip. (b) The 2-day and 4-day dark treatment measured by qRT-PCR.

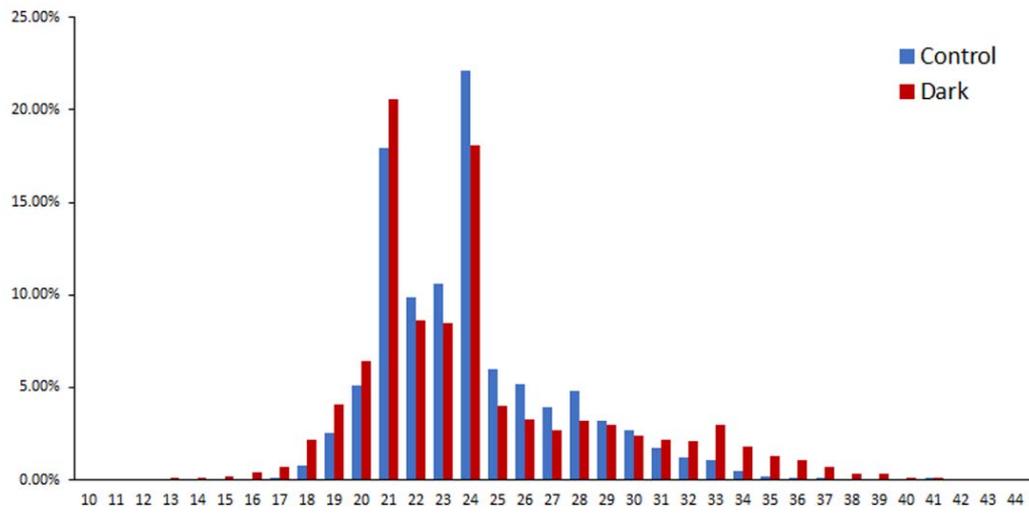

Supplementary Figure 2 | GO enrichment analysis of DHS-diminished genes under extended darkness by agriGO and REVIGO. The scatterplot shows the cluster representatives in a two-dimensional space derived by applying multidimensional scaling to a matrix of significant GO terms with semantic similarities. Bubble color and size indicates the $\log_{10}(\text{FDR P-value})$ (legend in bottom right-hand corner).

Supplementary Figure 3 | Differentially expressed genes analysis under extended darkness. (a) The number of differentially expressed genes under extended darkness. **(b, c)** GO enrichment analysis of up-regulated (b) and down-regulated (c) genes under extended darkness by agriGO and REVIGO. The scatterplot shows the cluster representatives in a two-dimensional space derived by applying multidimensional scaling to a matrix of significant GO terms with semantic similarities. Bubble color and size indicates the $\log_{10}(\text{FDR P-value})$ (legend in the bottom right-hand corner).

Supplementary Figure 4 | Locations of DHS-changed TEs on chromosomes. (a) DHS-increased TEs under extended darkness. (b) DHS-diminished TEs under extended darkness.

Supplementary Figure 5 | Length distribution of sequenced small RNAs.

Supplementary Table 1 | Statistical summary of DNase I sequencing libraries and identified peak number.
