

## Supplementary material

**Table S1.** Haematological variables in the striped dolphin. Haematological values are compared to the reference intervals of free-ranging, age-matched bottlenose dolphins [12]. SI = système international d'unités; HTC = hematocrit; RBC = red blood cells; MCV = mean cell volume; MCH = mean cell hemoglobin; MCHC= mean cell hemoglobin concentration; RDW = red cell distribution width; PLT= platelets; WBC = white blood cell. **Bold;** the value outside the reference intervals.
