

Supplementary figure 1.

C-Raf-specific IgG in sera of p.o/i.v. (A) or i.n (B) immunized BxB23 mice (serum dilution 1:1000) demonstrated by western blotting.

- Lanes: preimmune sera; + lanes: sera of the immunized BxB23 mice. 1 μ g purified C-Raf-GST (glutathione S-transferase) was loaded per lane. Recombinant wild type C-Raf protein was expressed in Sf9 cells and purified as a GST fusion as described (Hekman M, et al., J Biol Chem 2002; 277:24090–24102). Purity of the C-Raf-GST preparations was controlled by SDS-polyacrylamide gel electrophoresis and staining with Coomassie Blue.
