HPLC Analysis of 20	S30
<i>E</i> and <i>Z</i> isomers of 20: HPLC-MS and UV spectra.....	S31
<i>E</i> and <i>Z</i> isomers of 20: MS spectra	S32

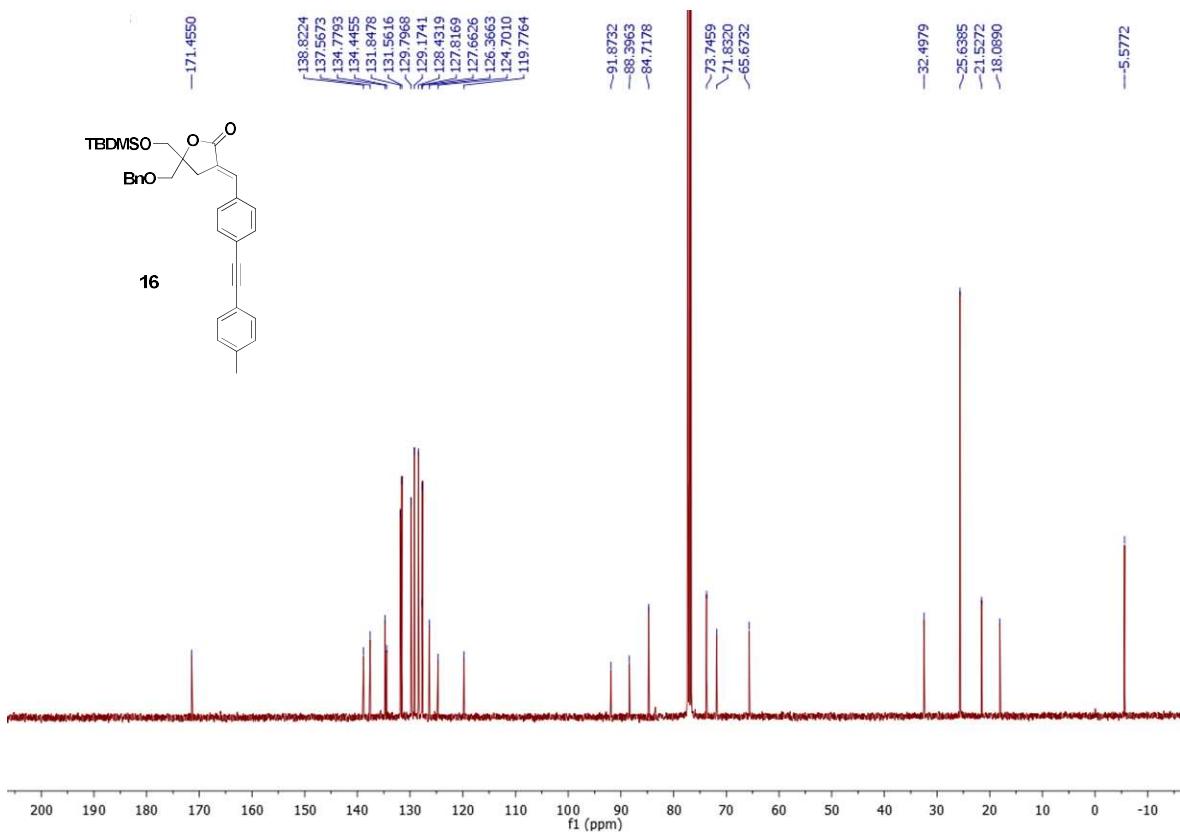

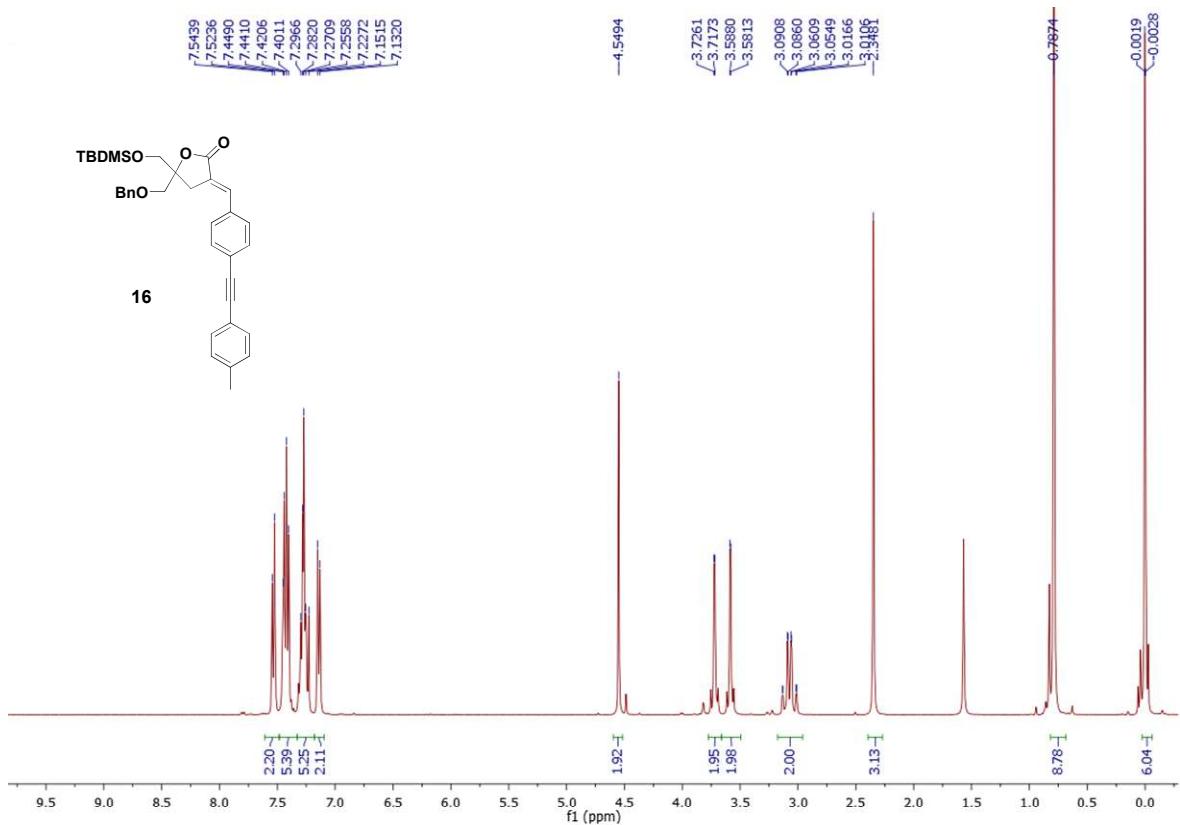

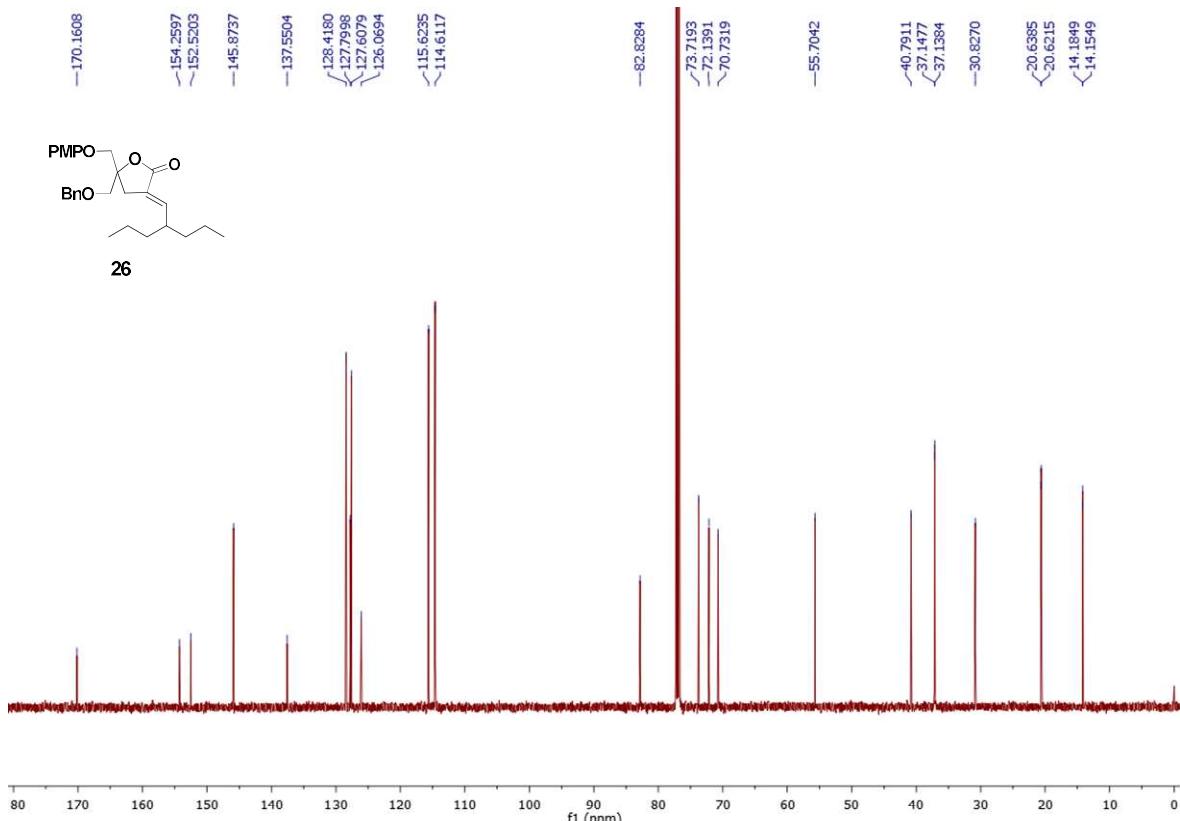

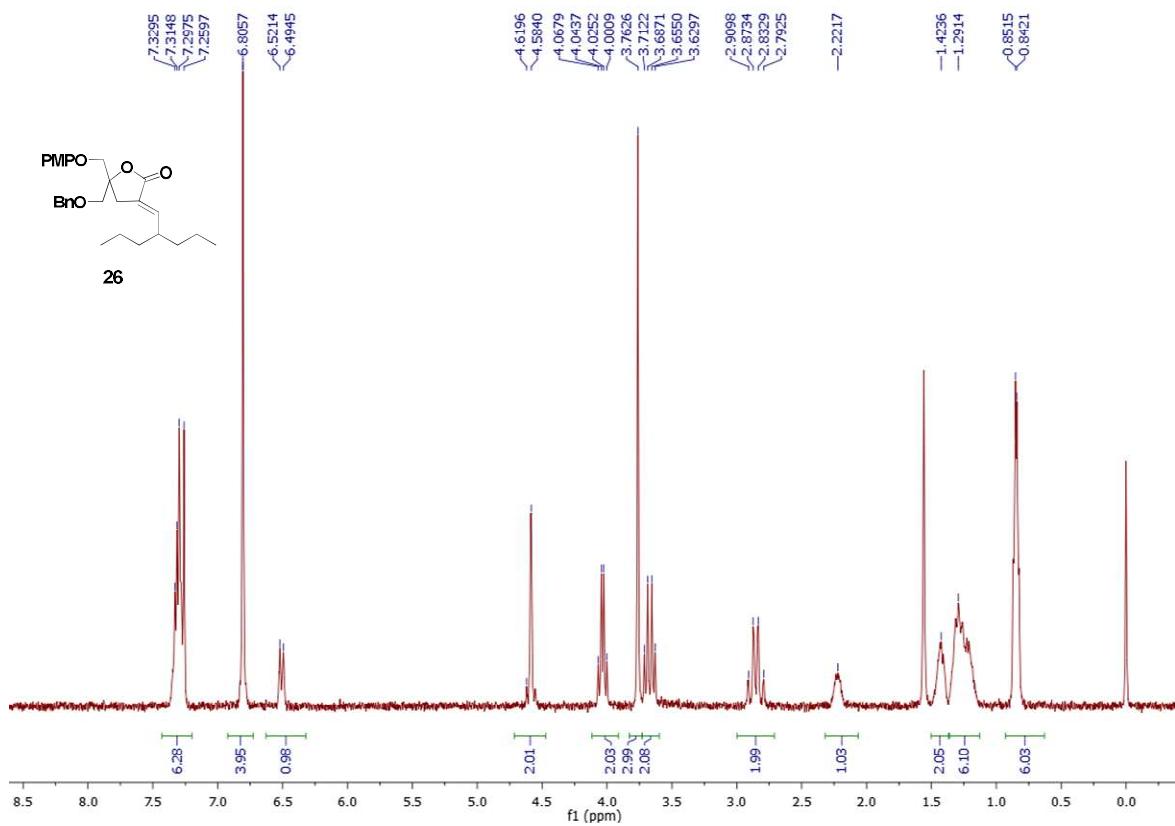

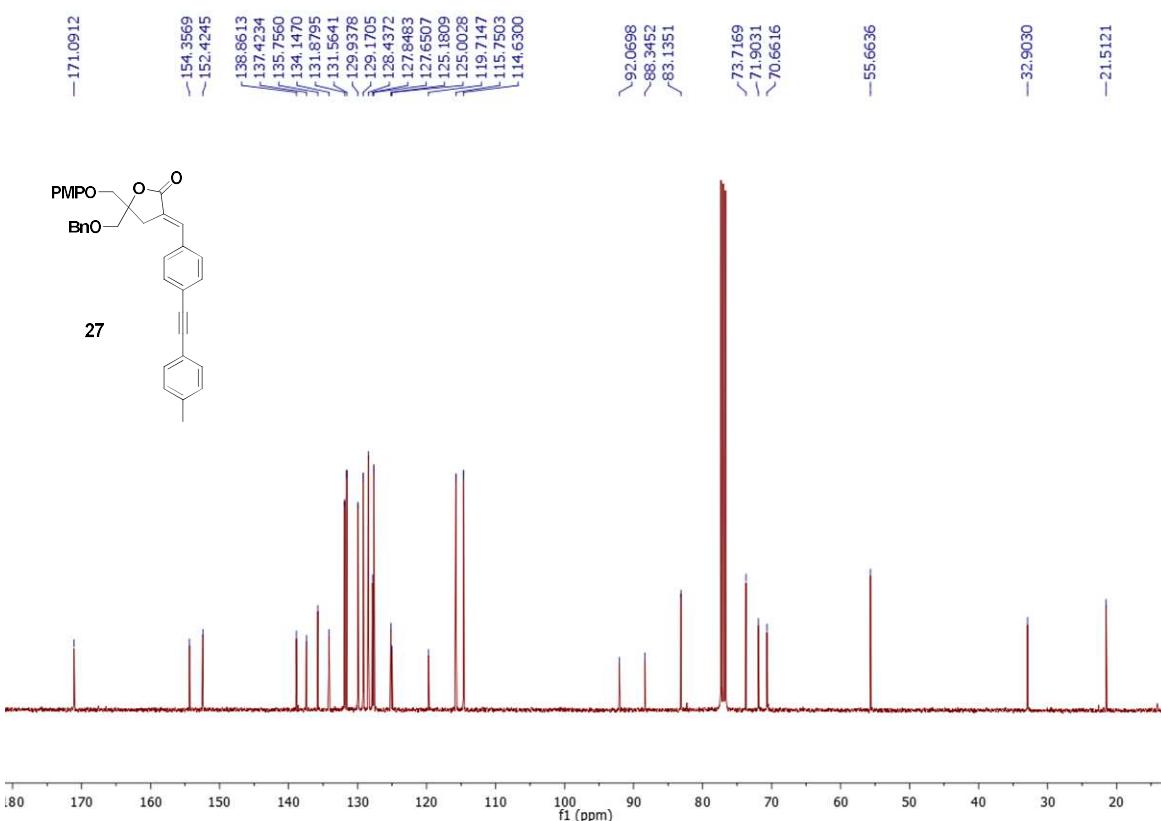

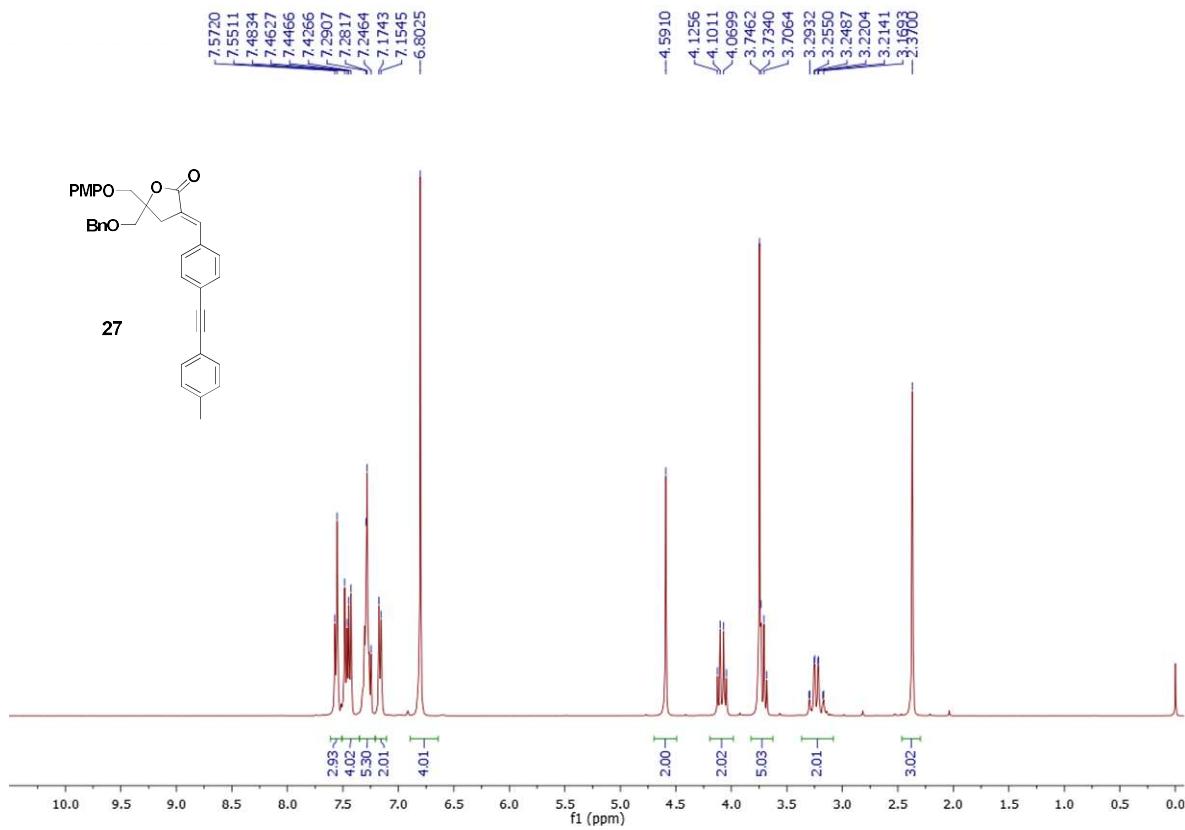

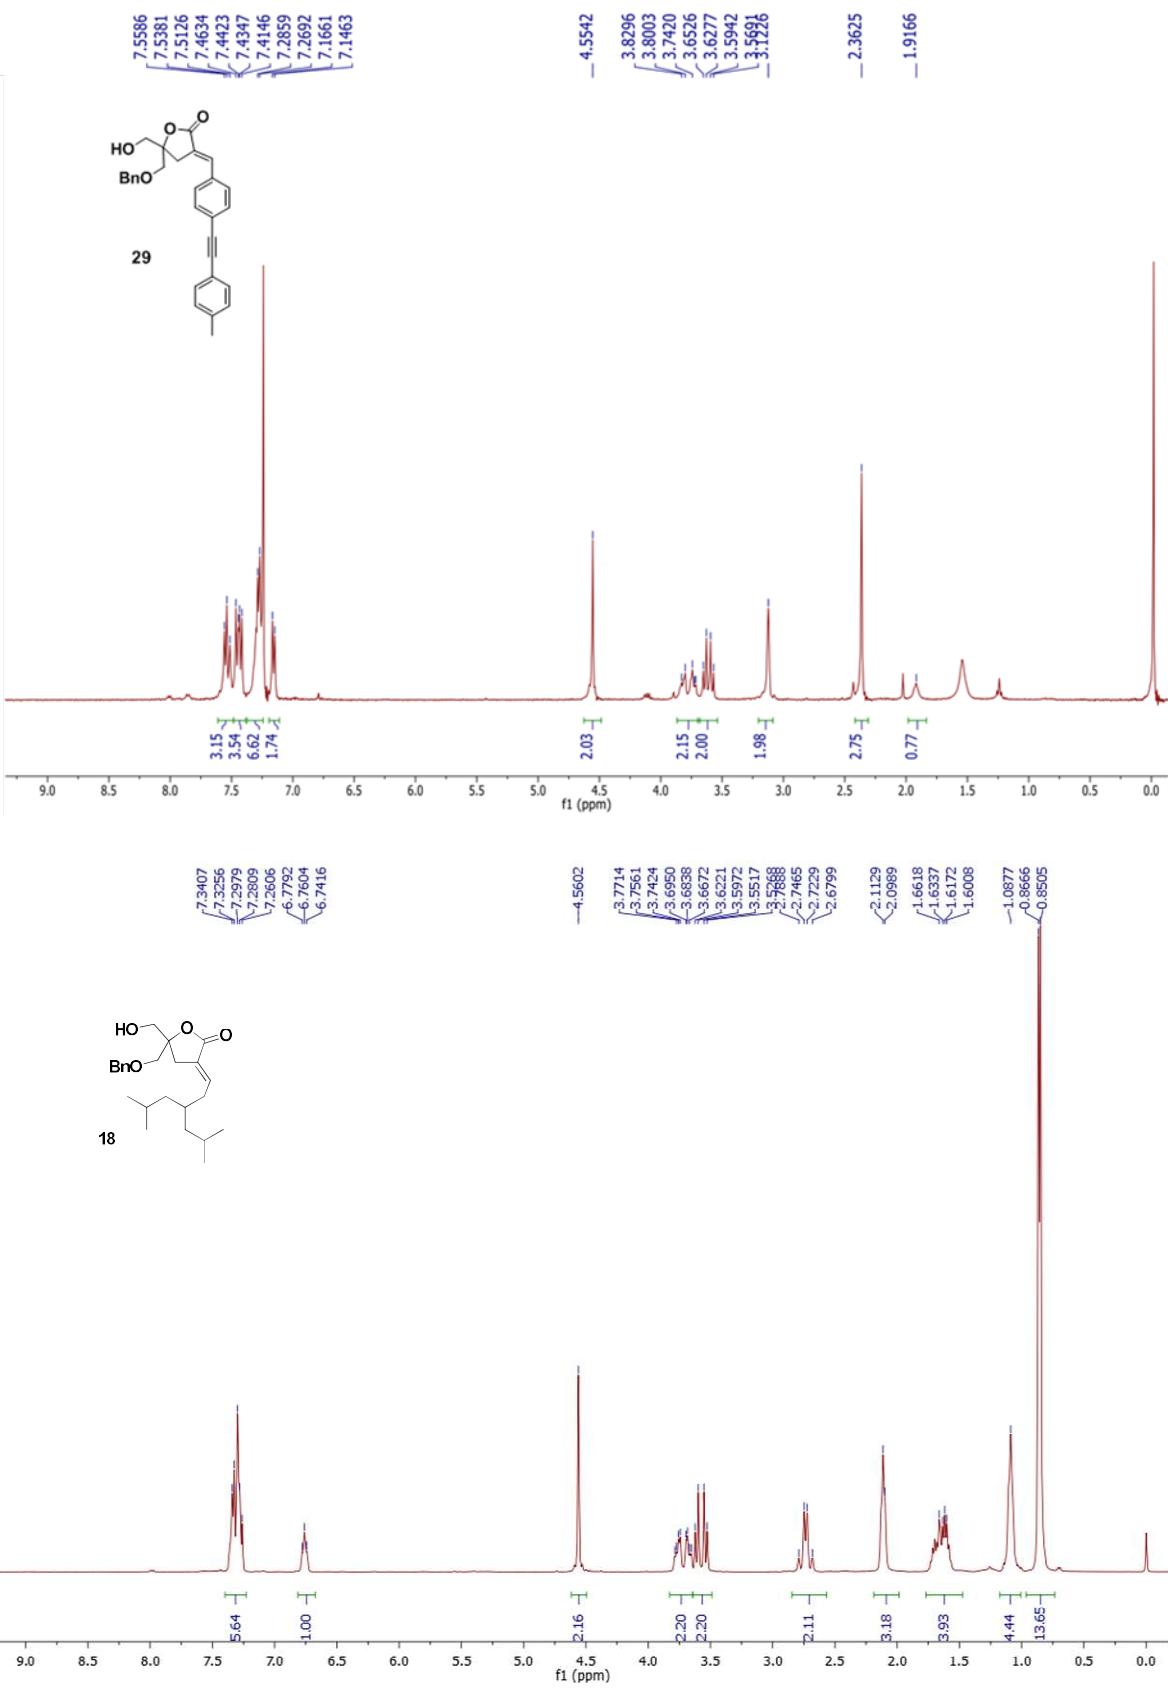

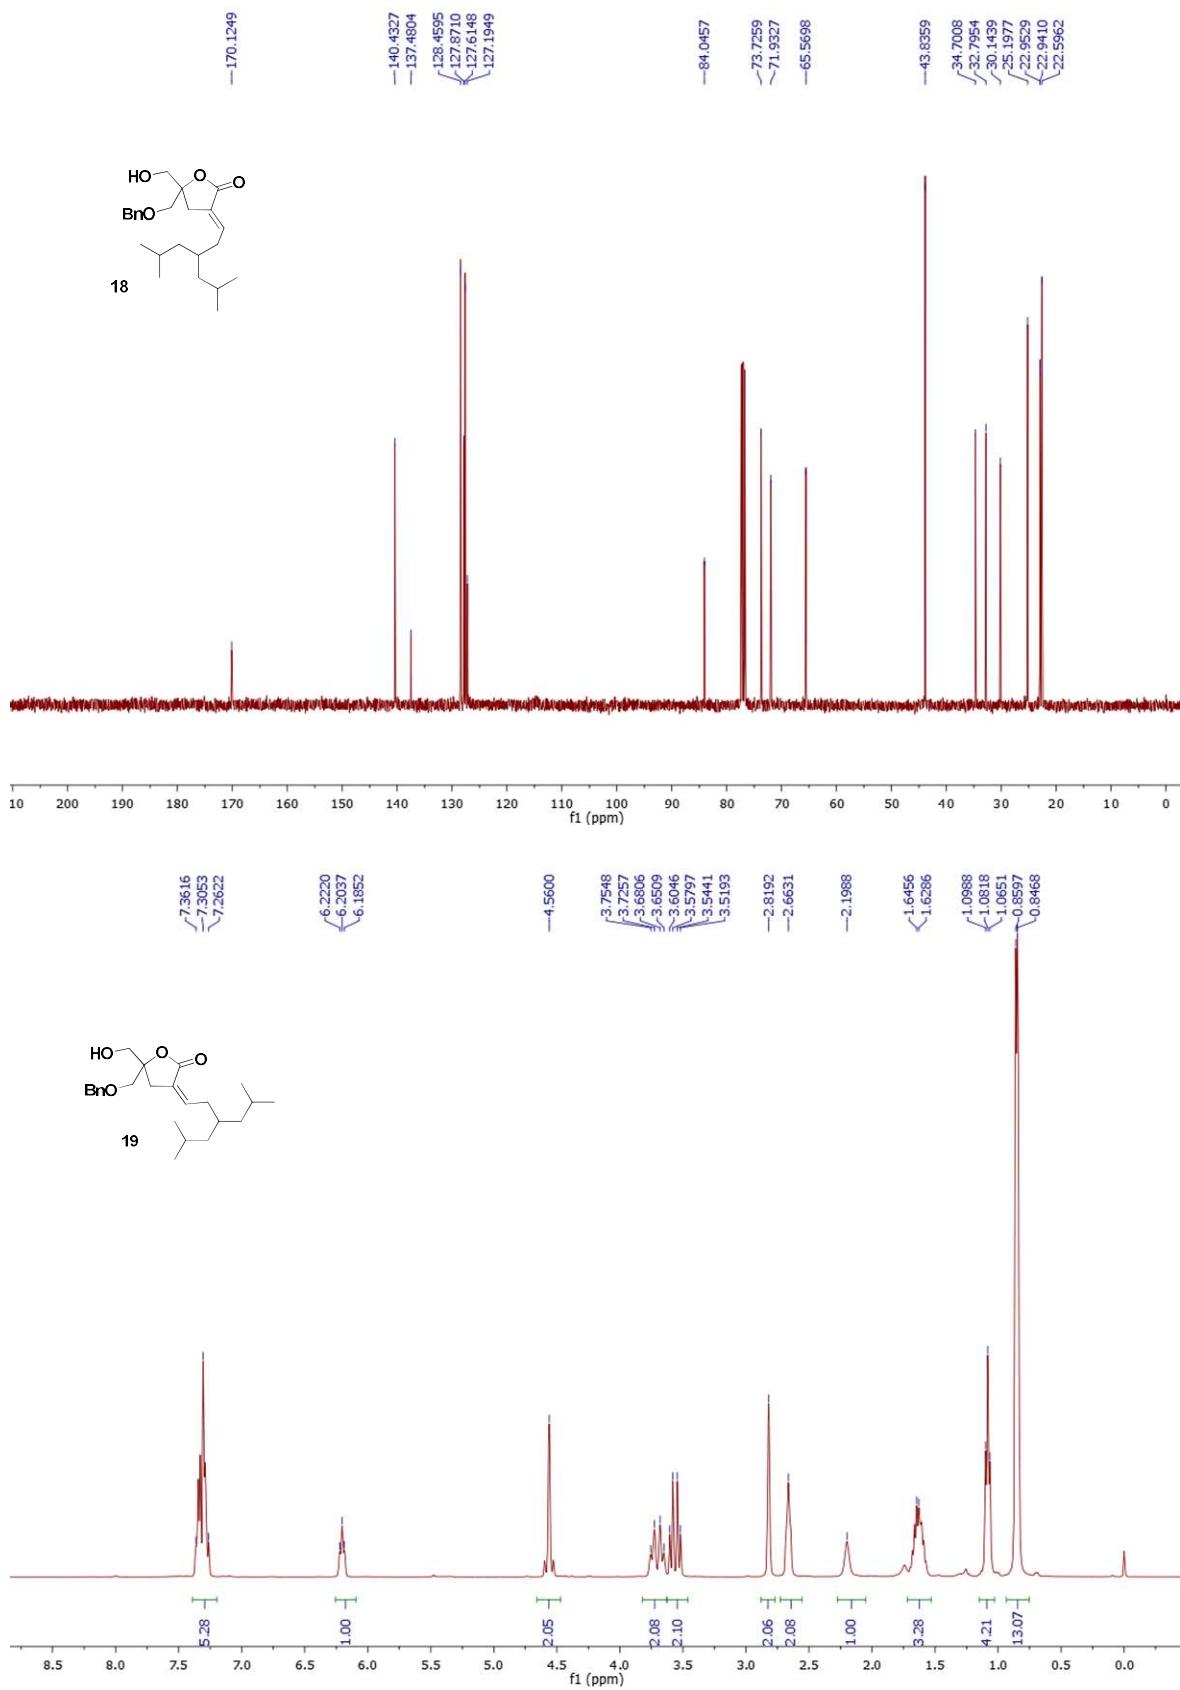

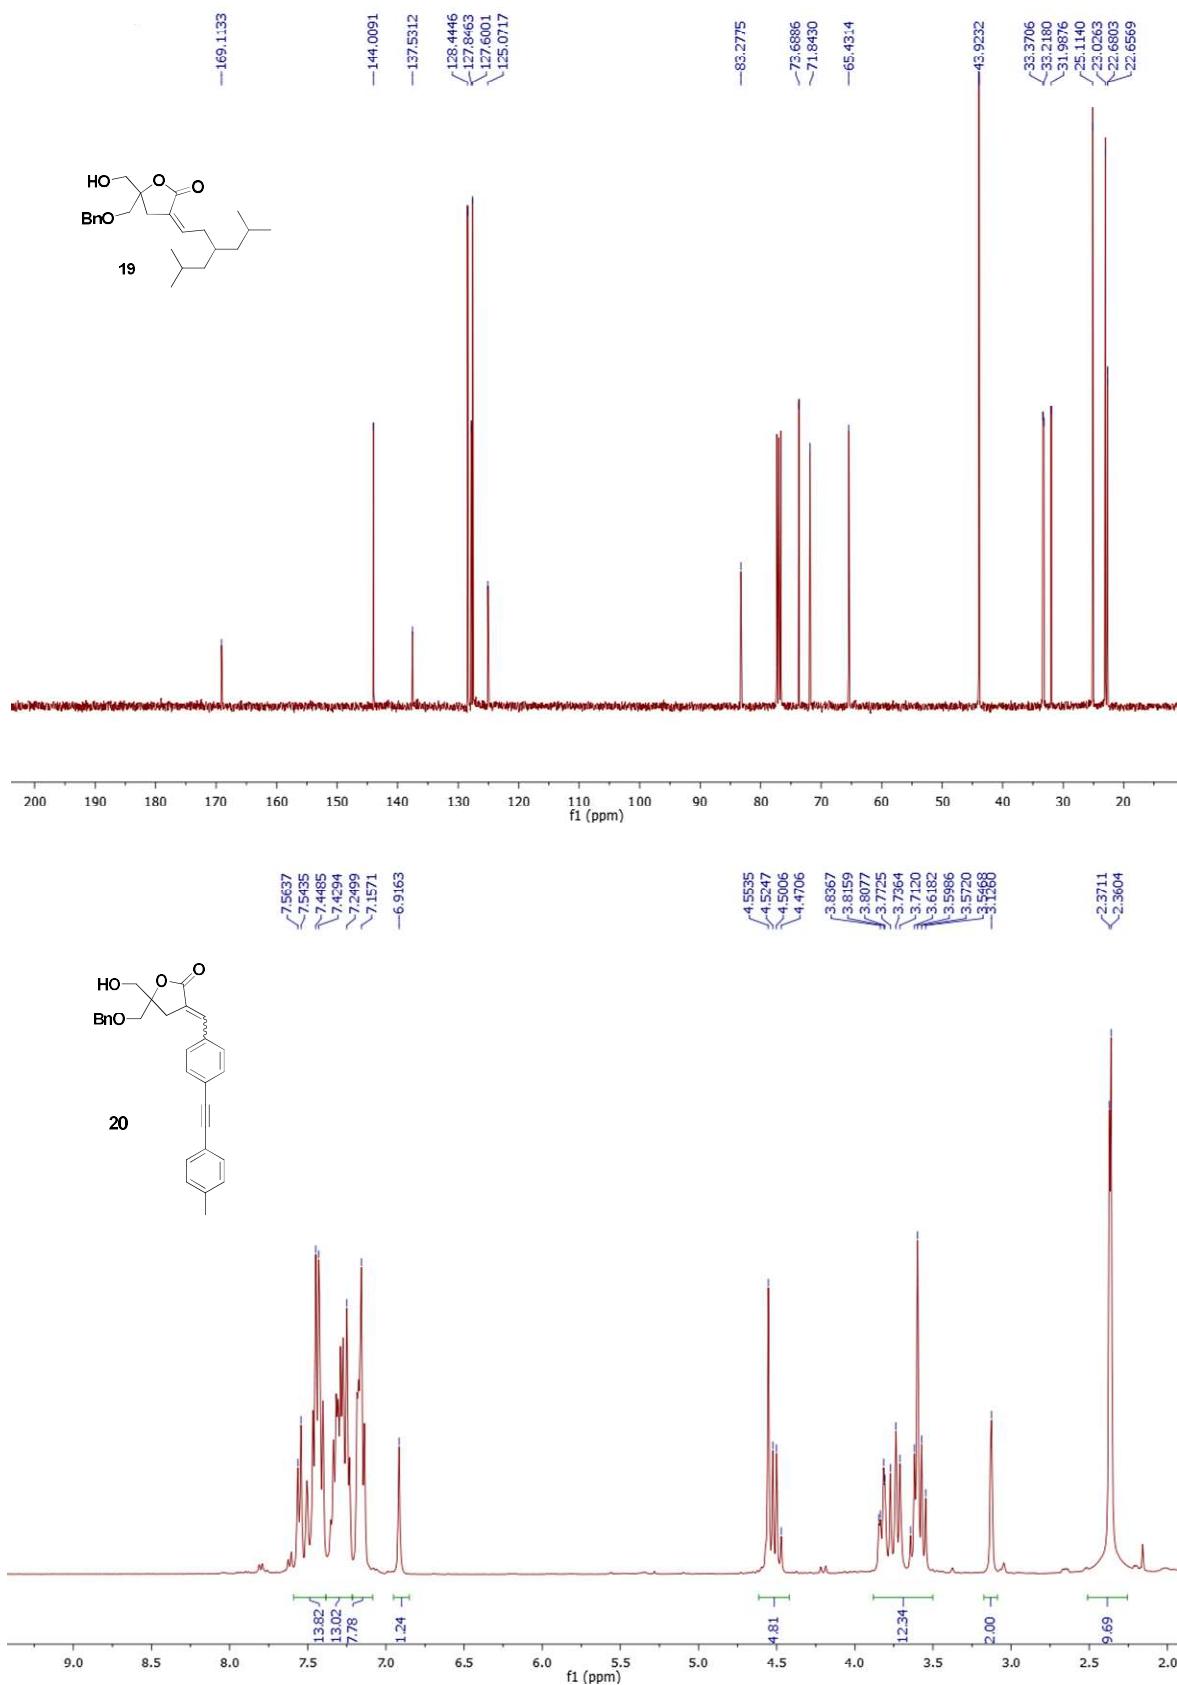

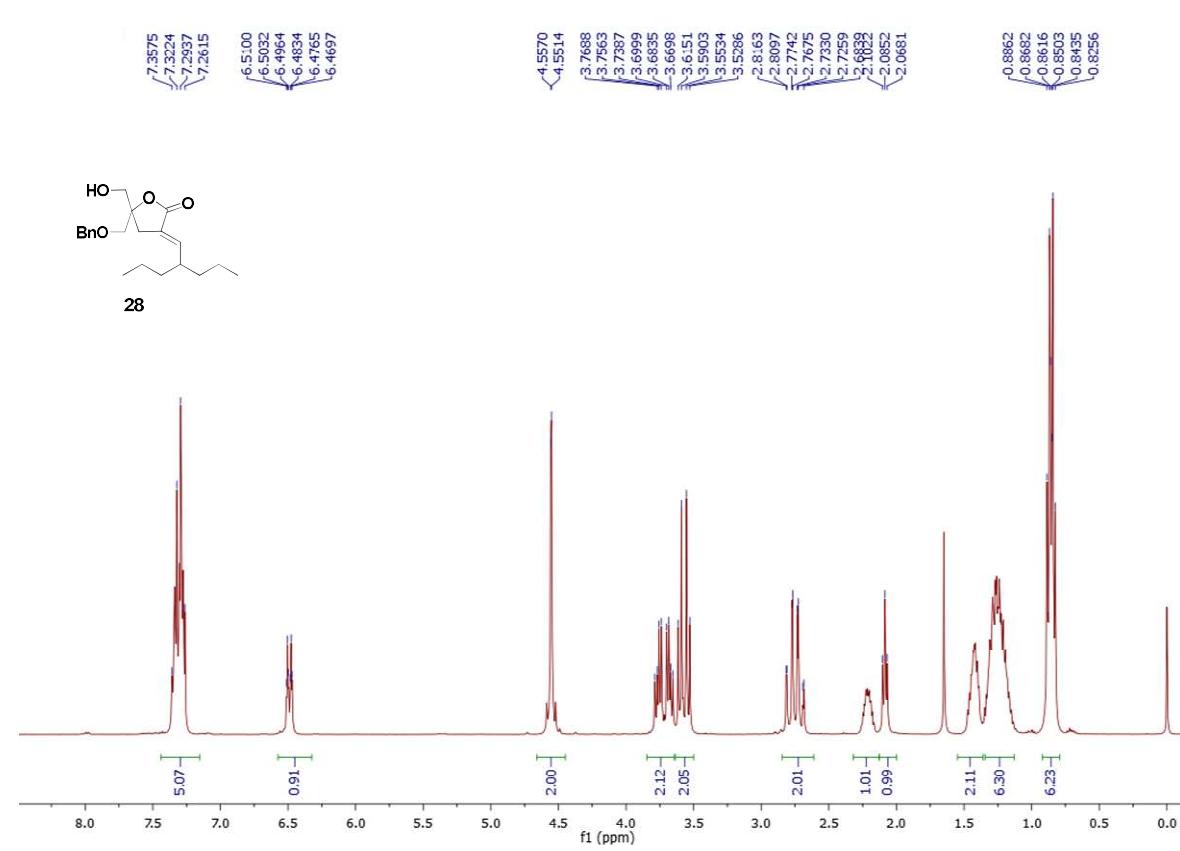

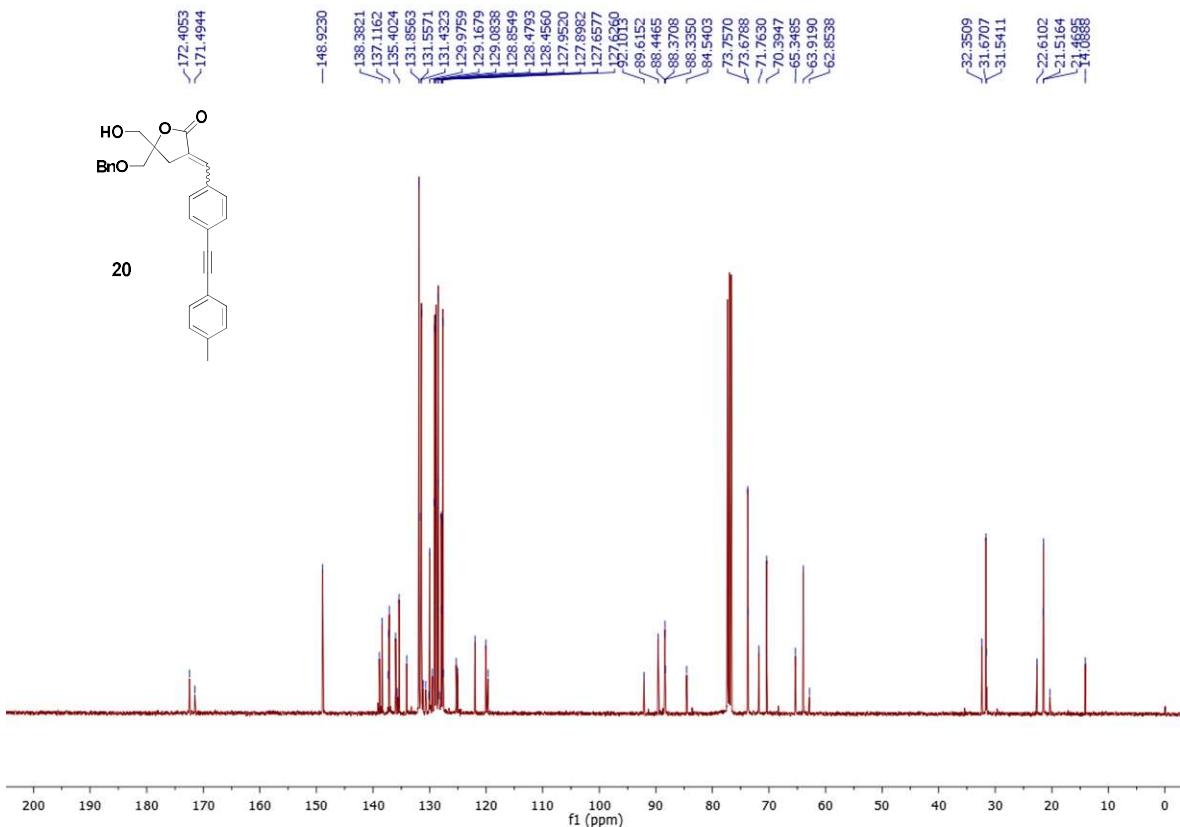

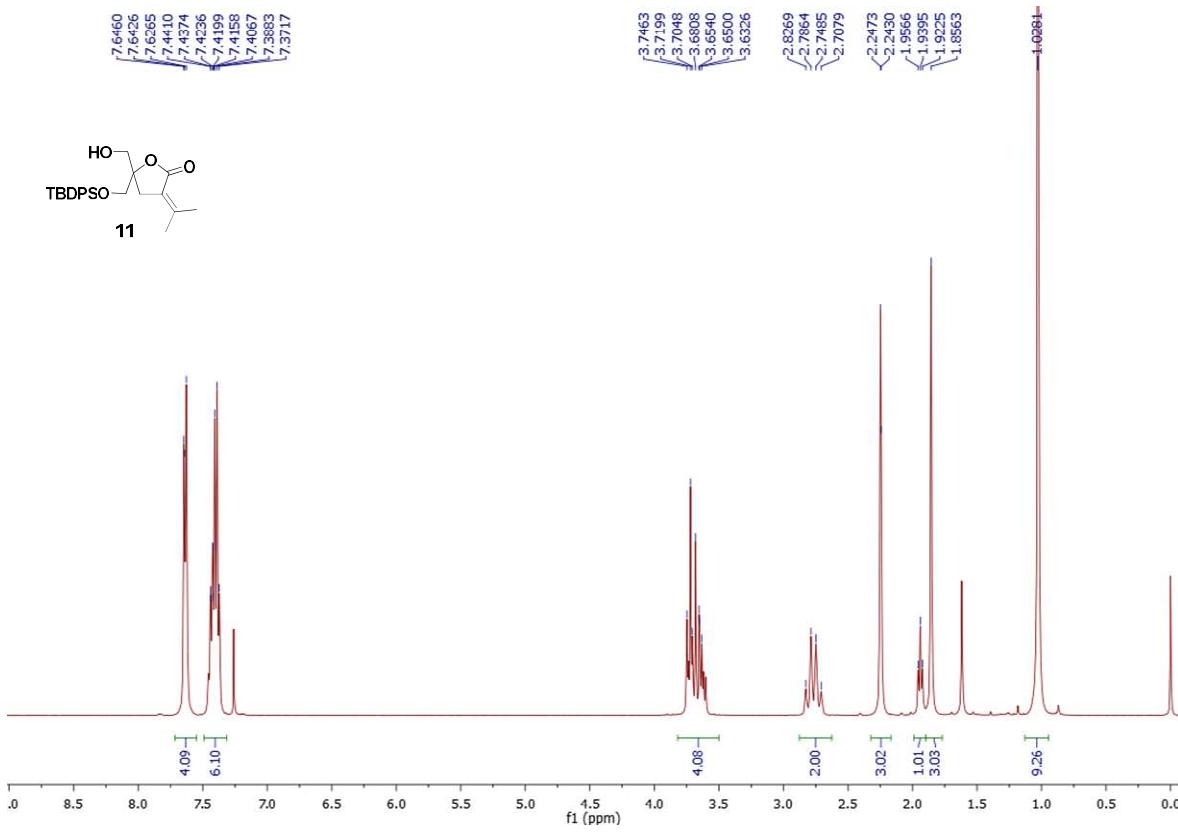

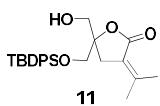

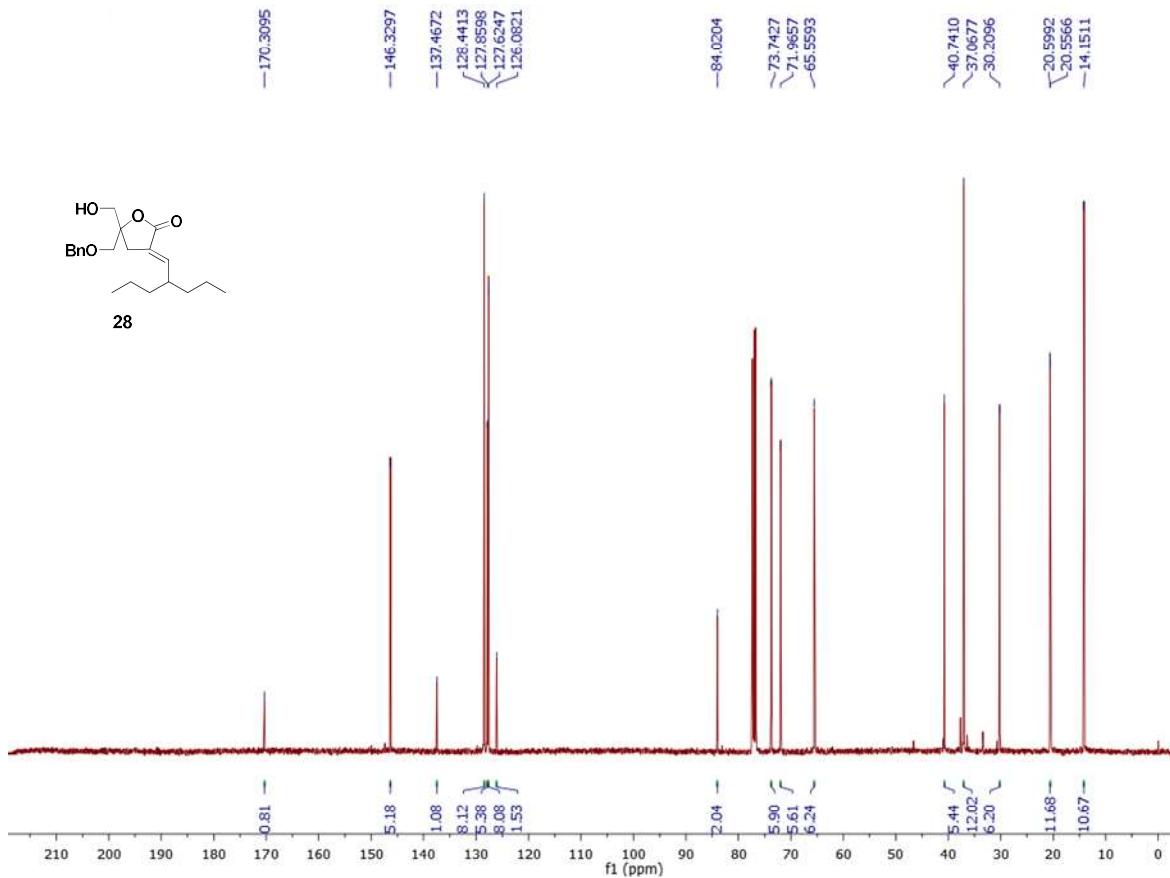

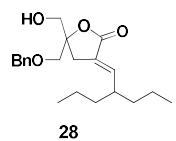

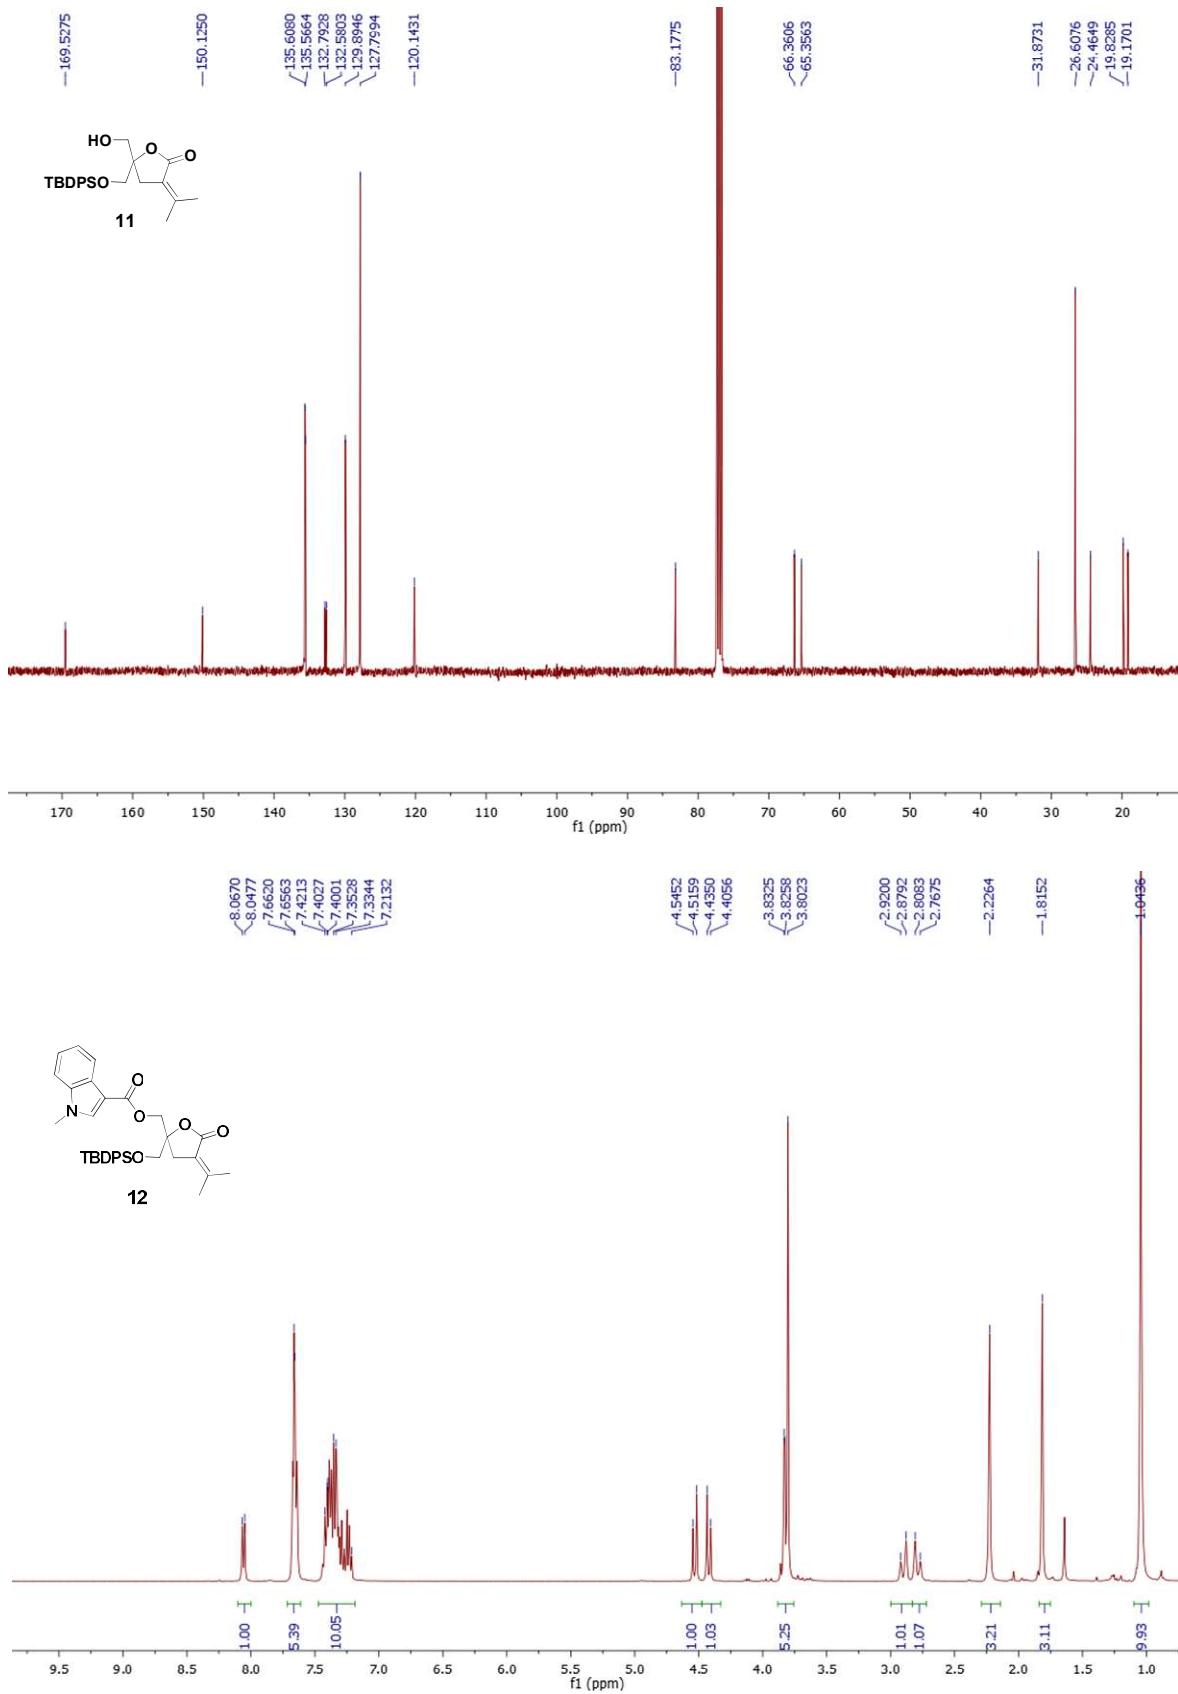

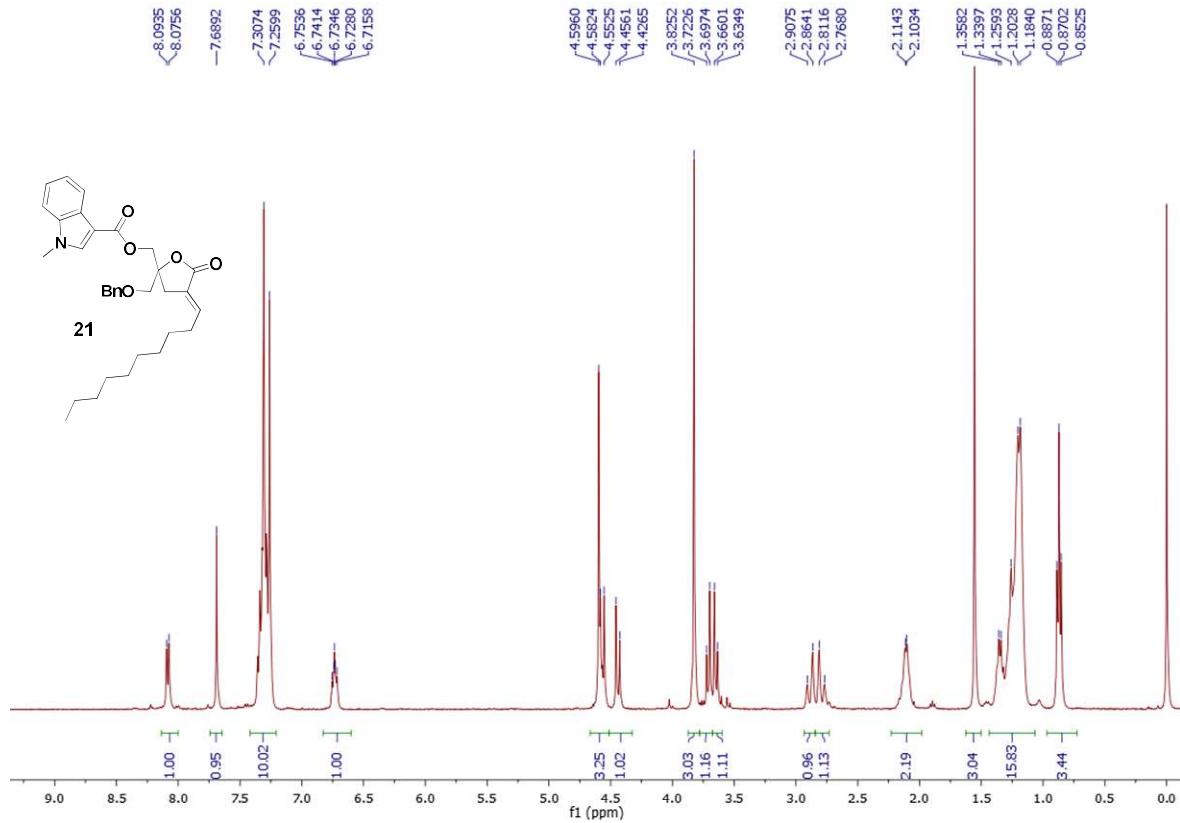

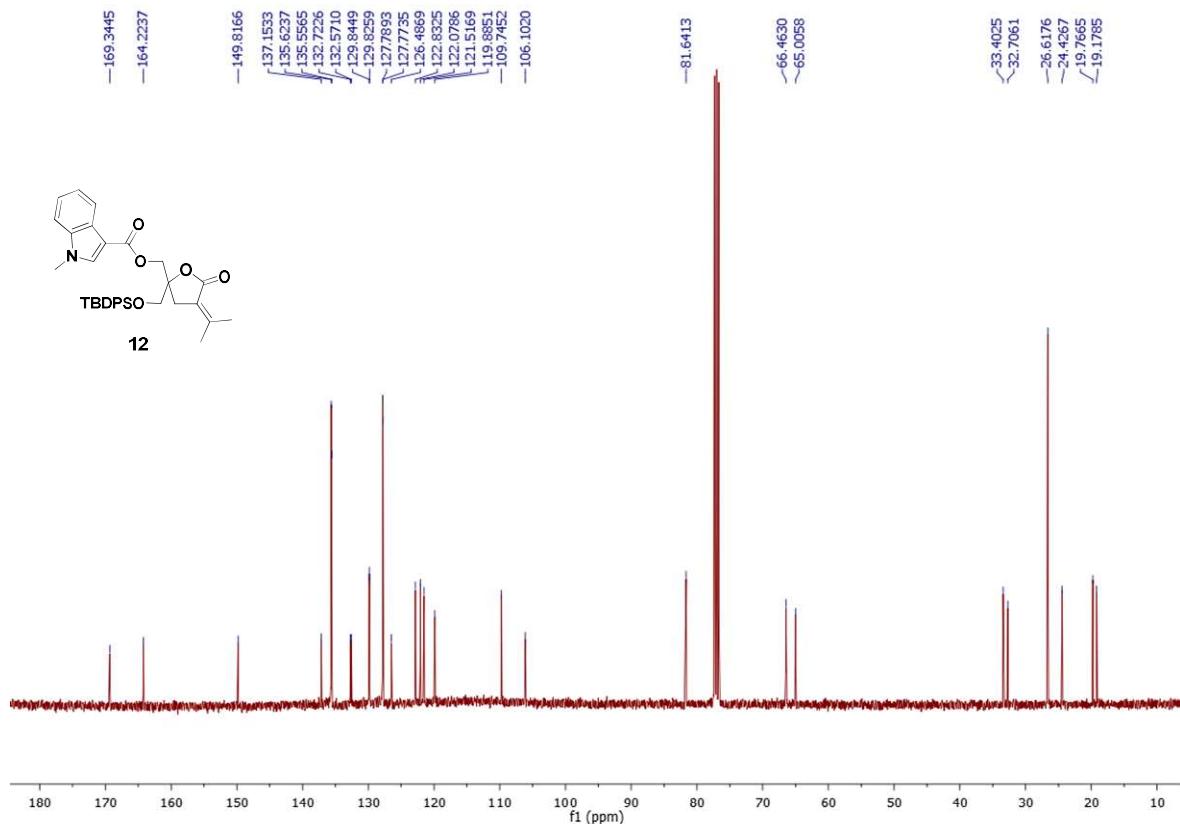

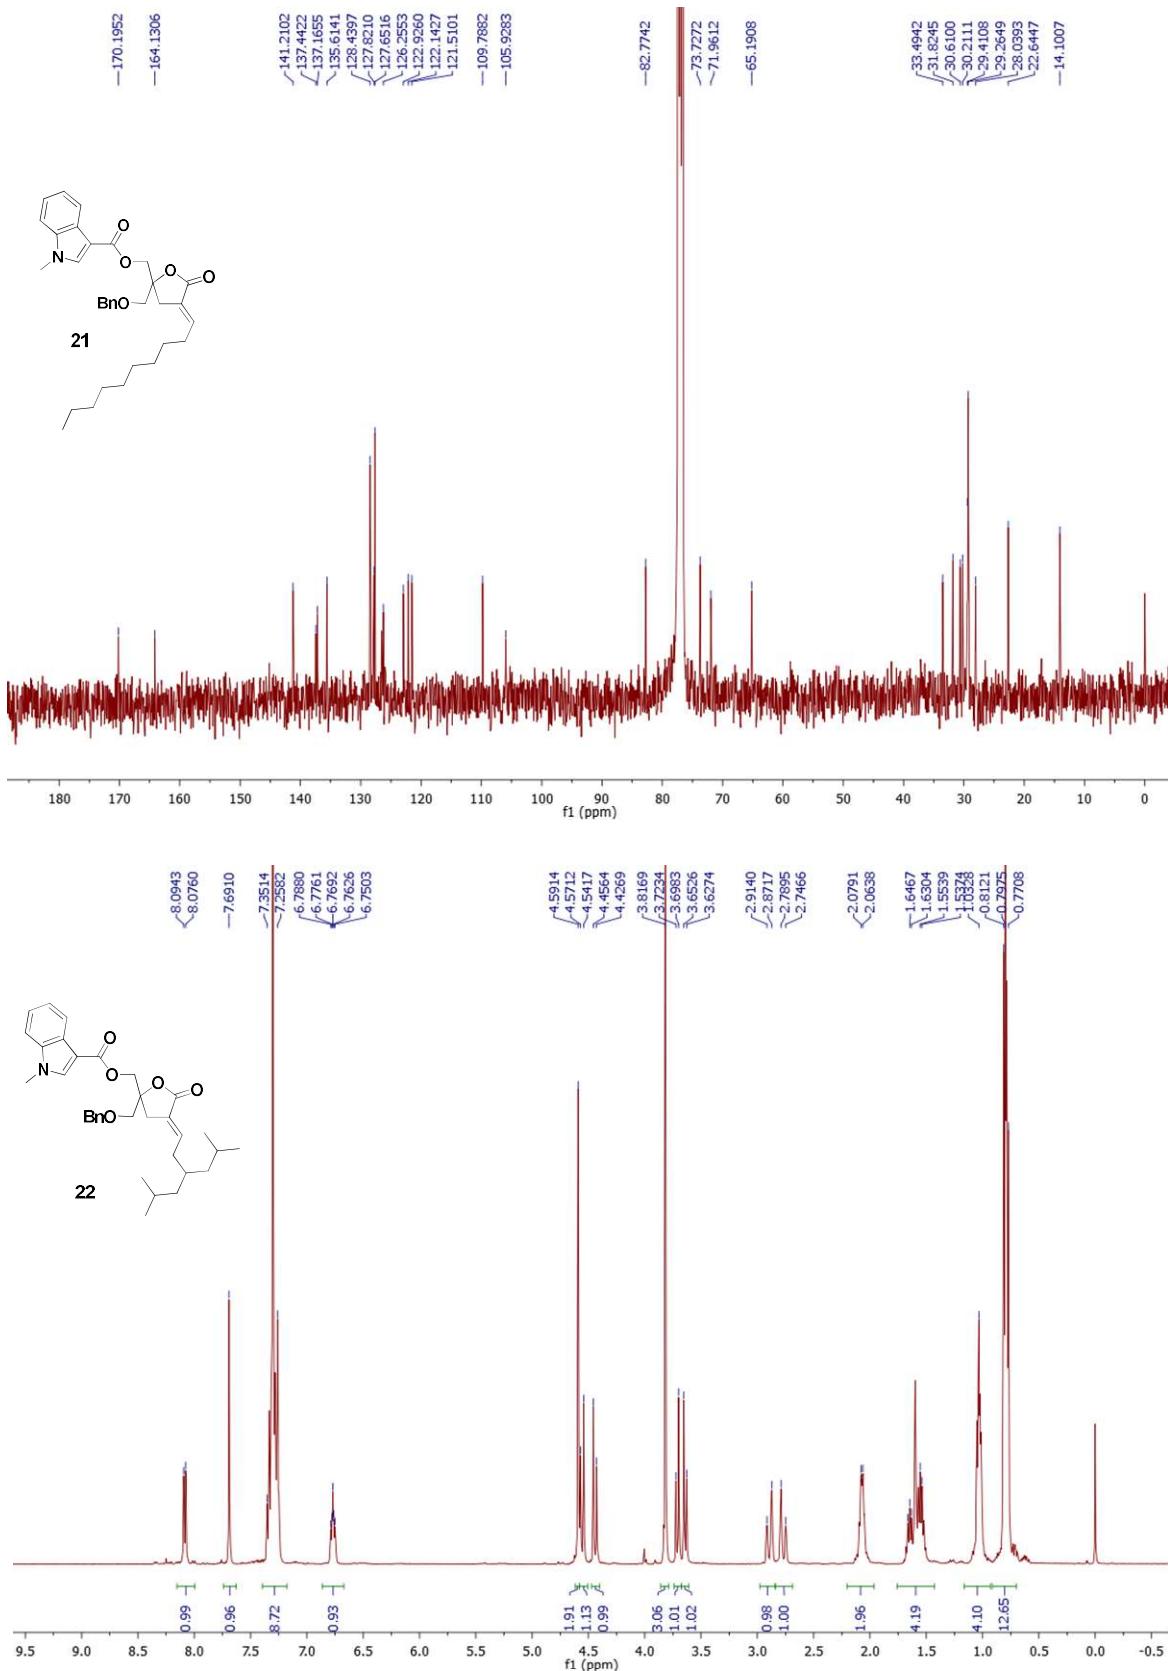

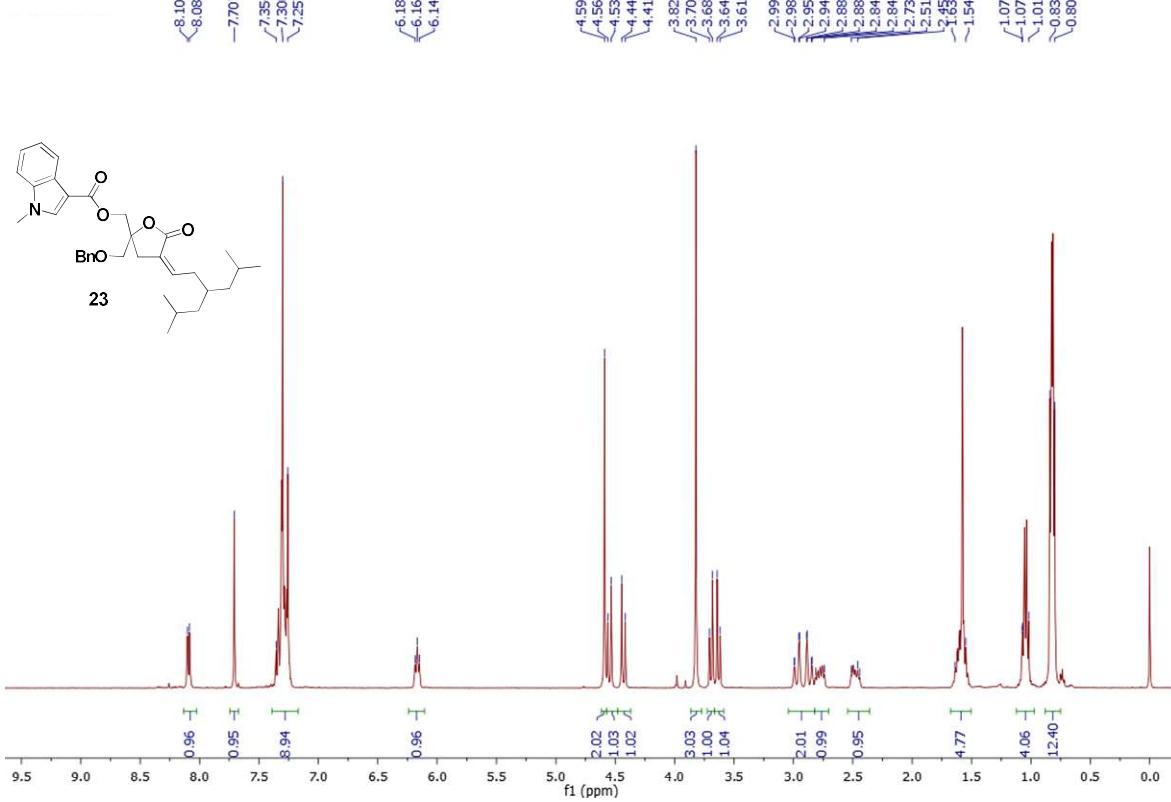

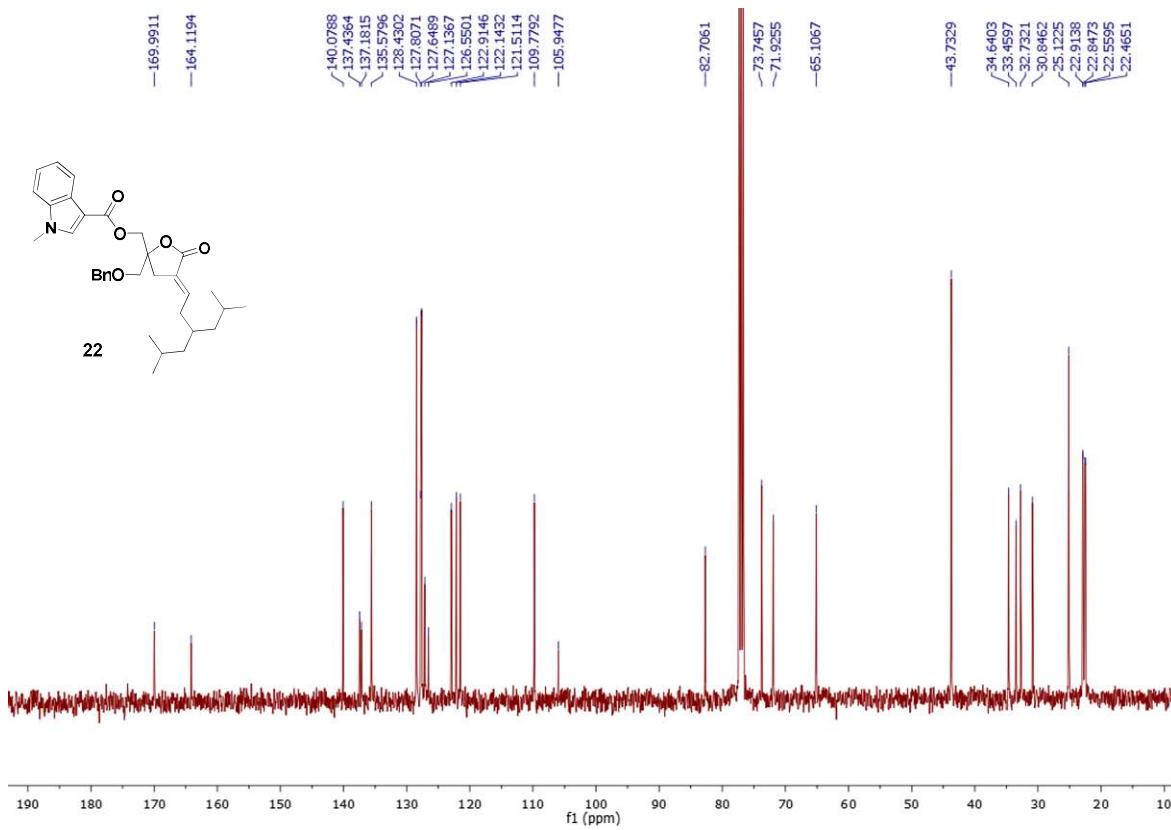

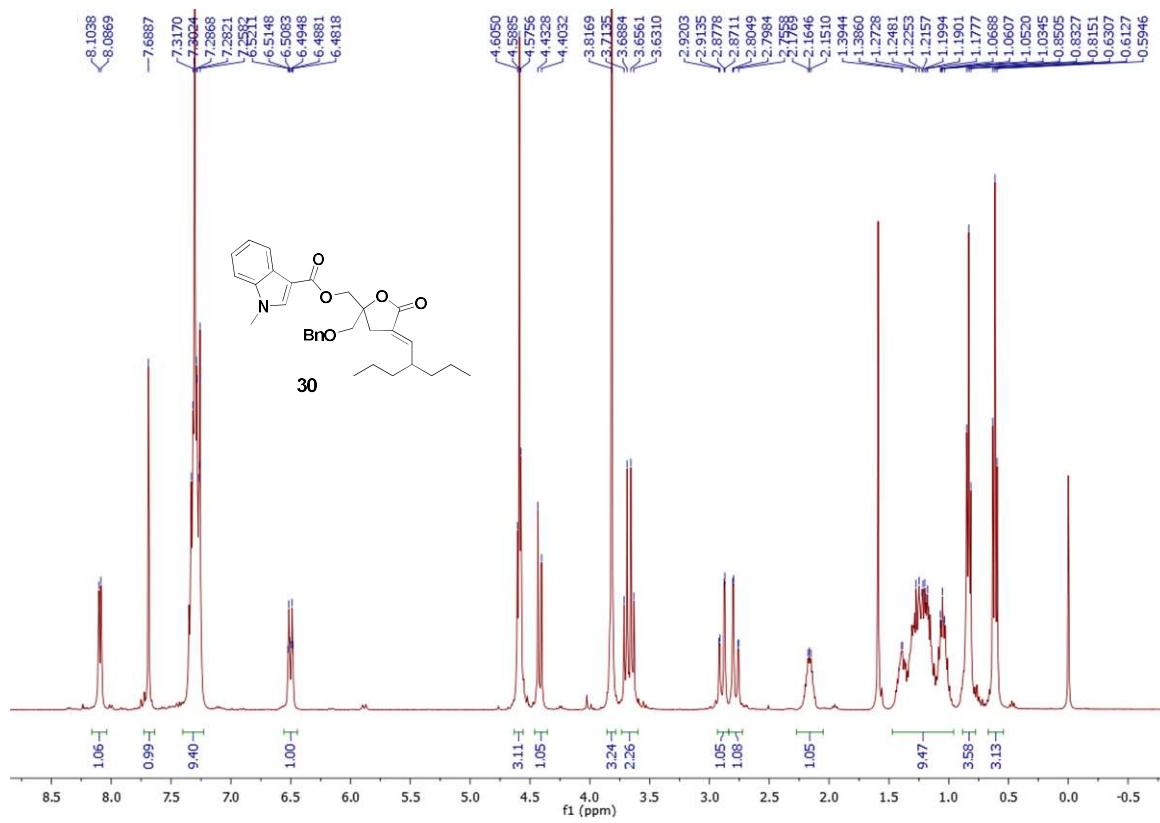

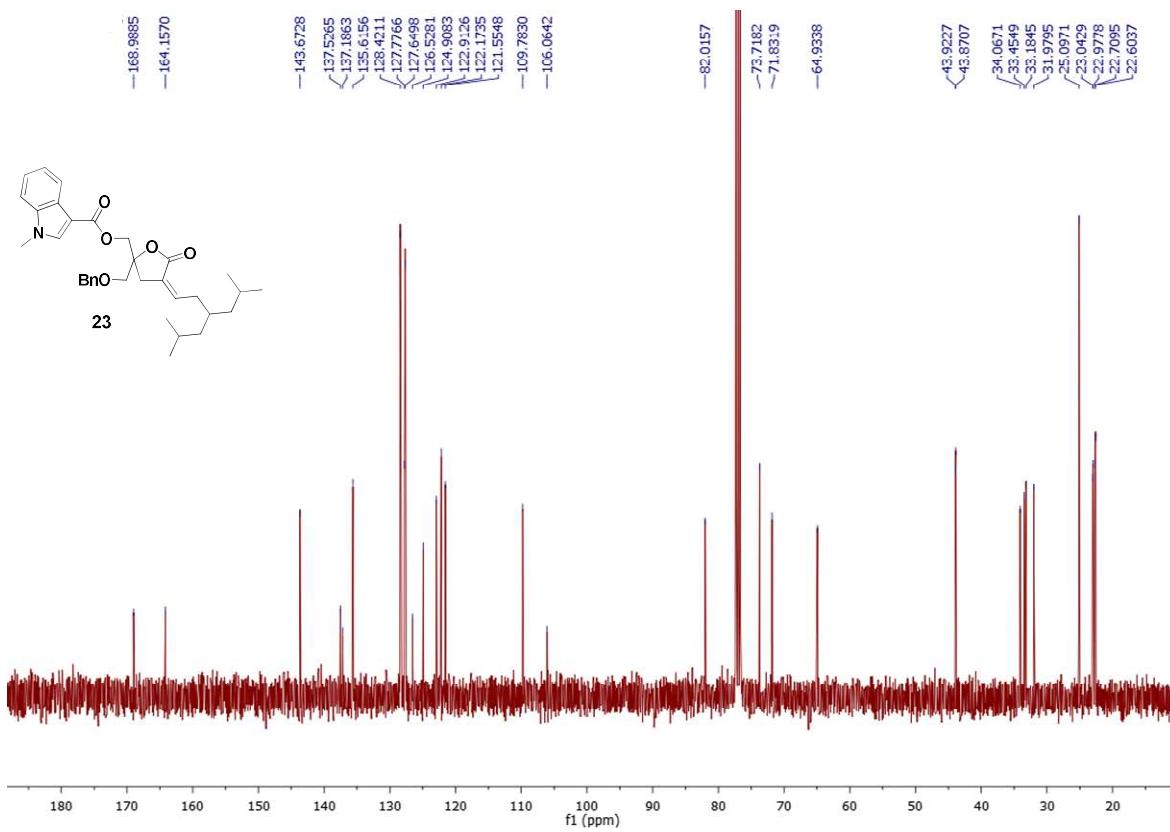

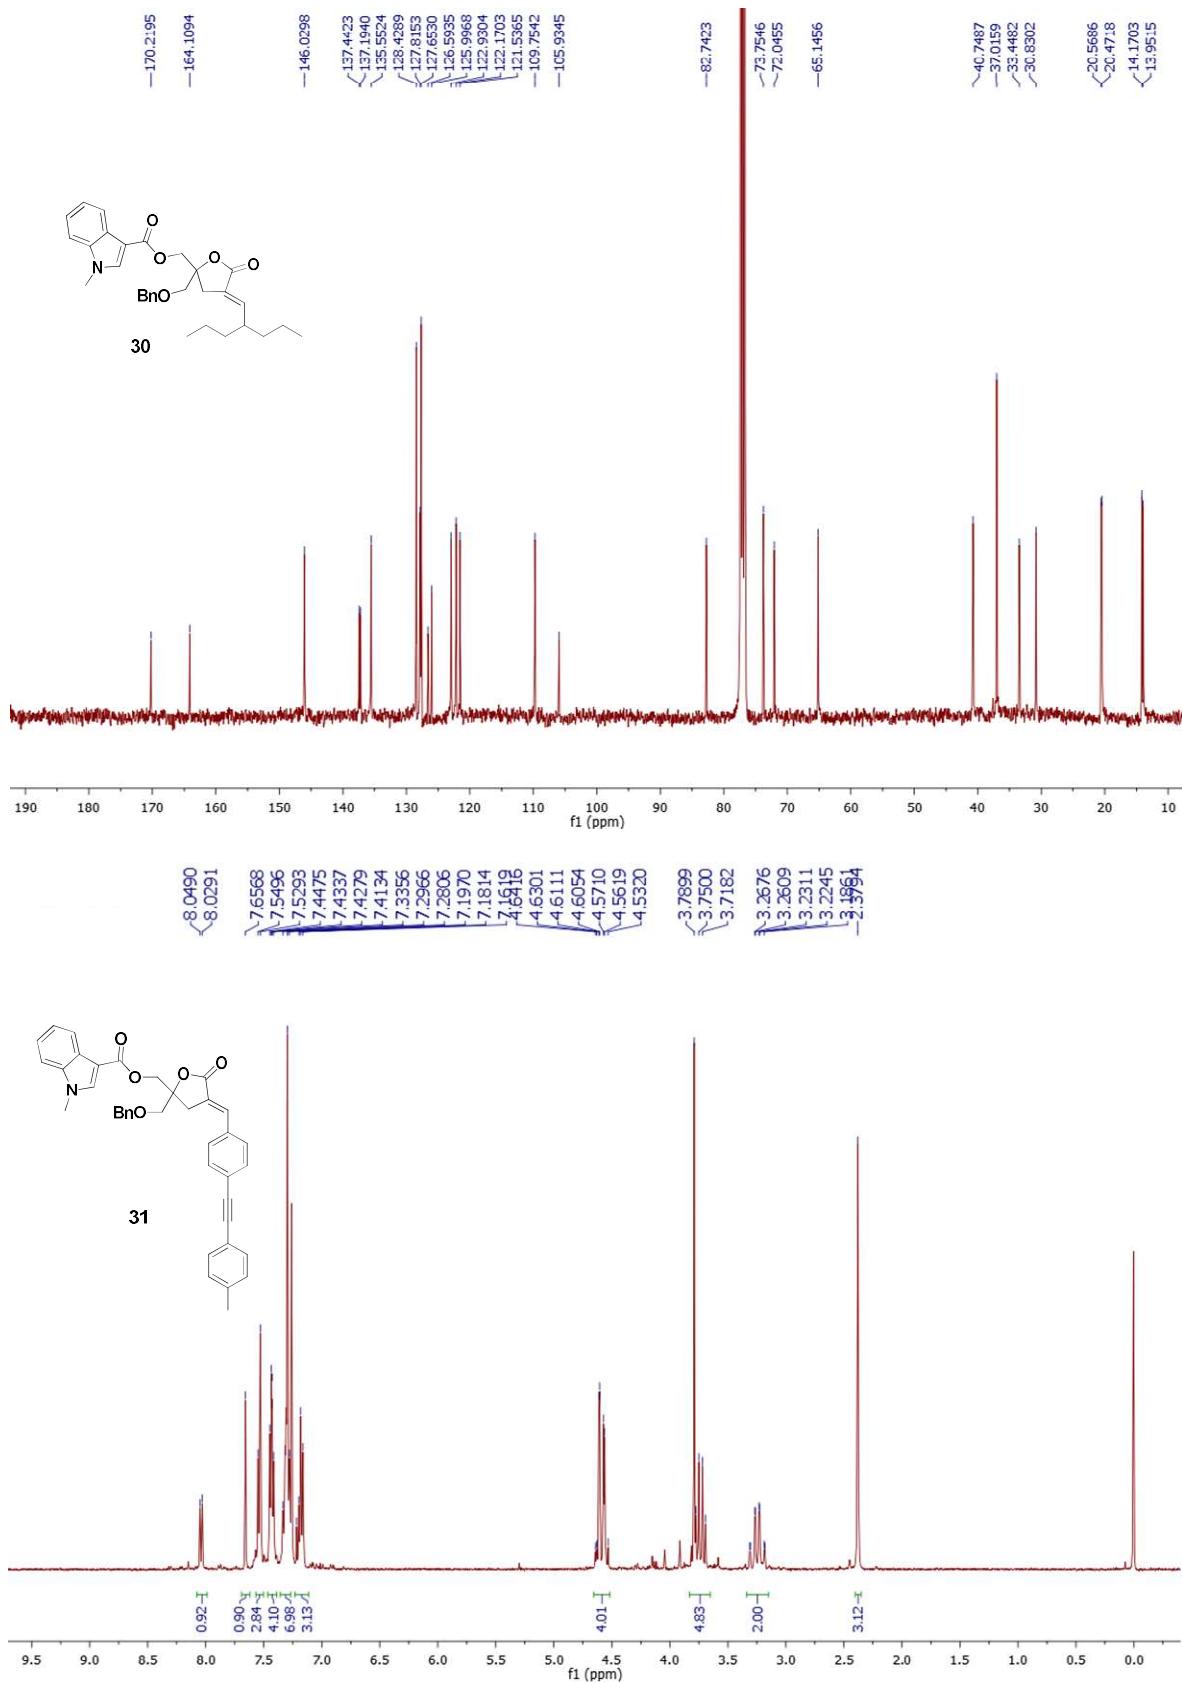

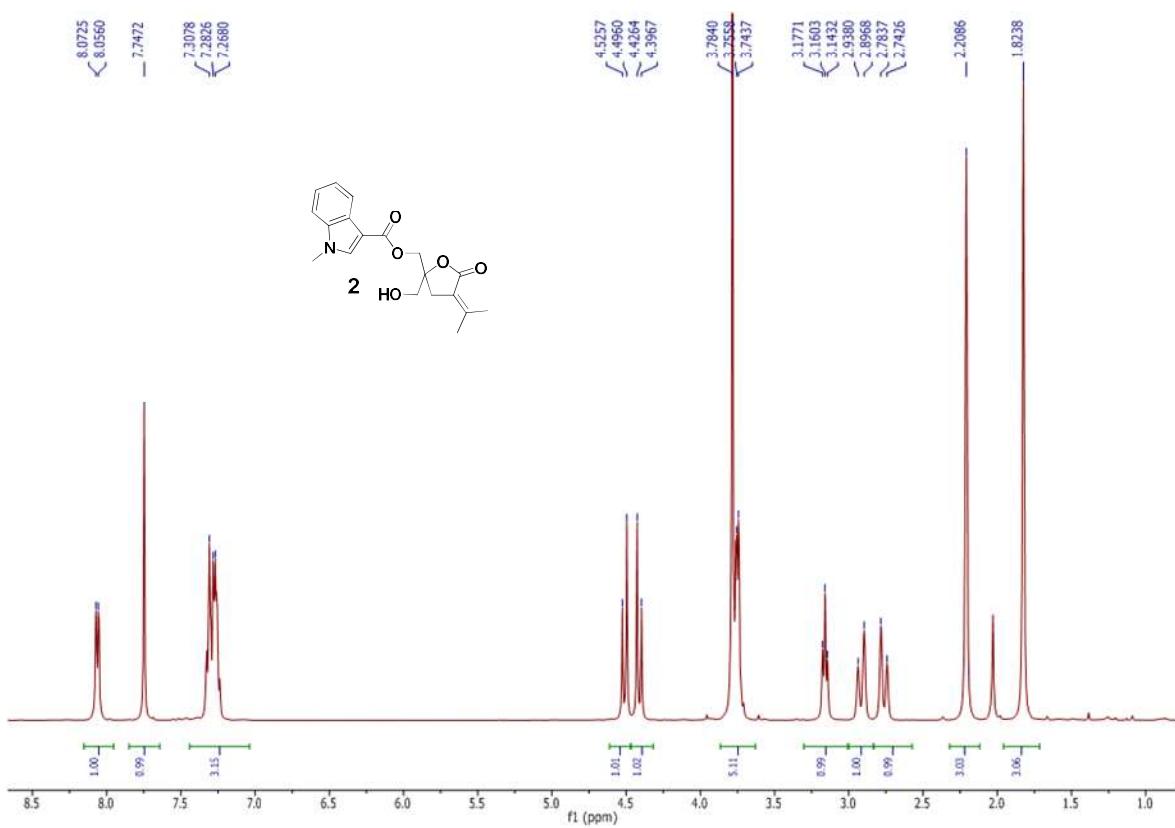

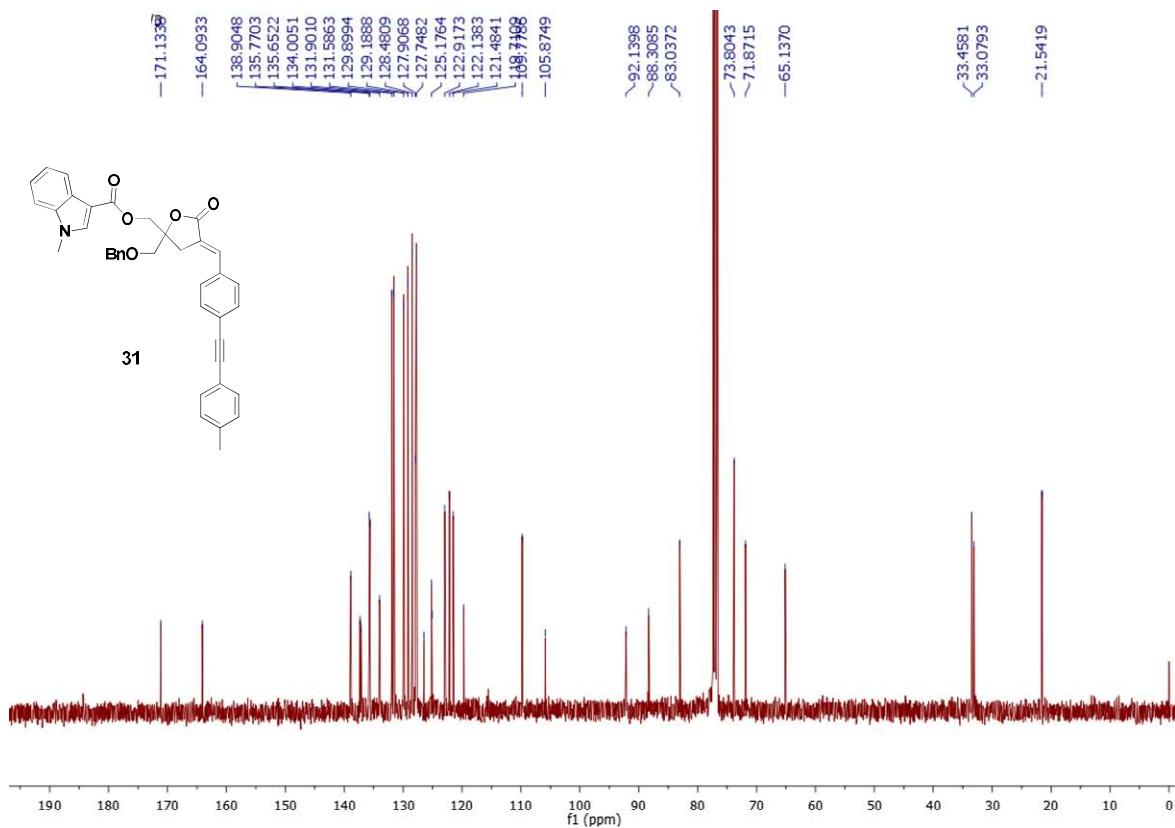

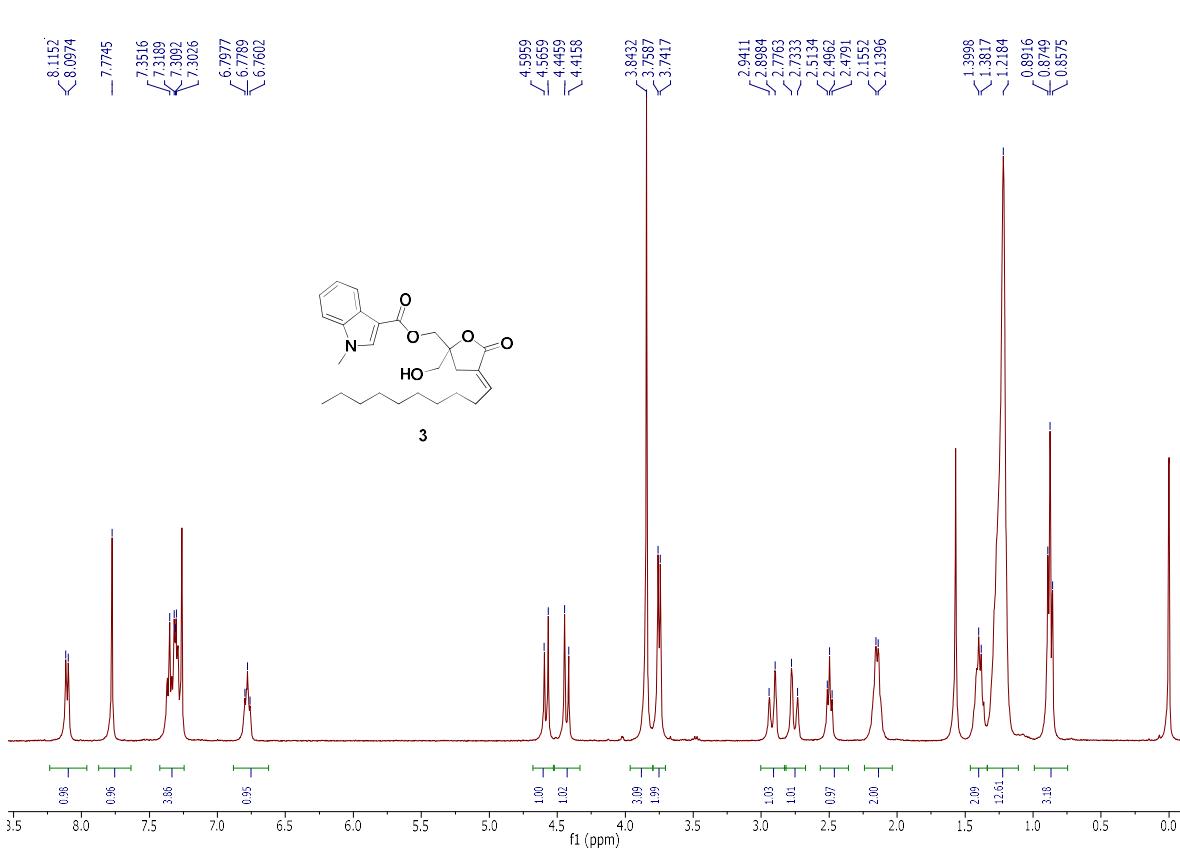

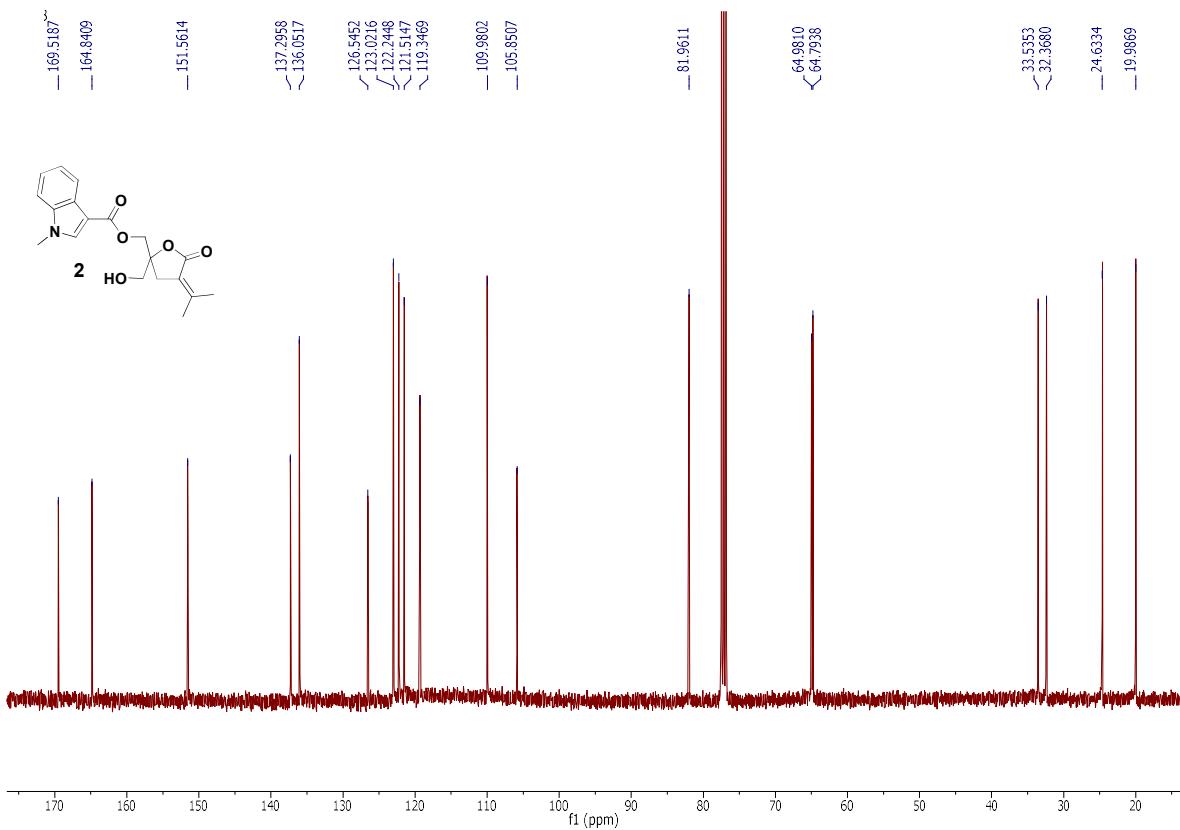

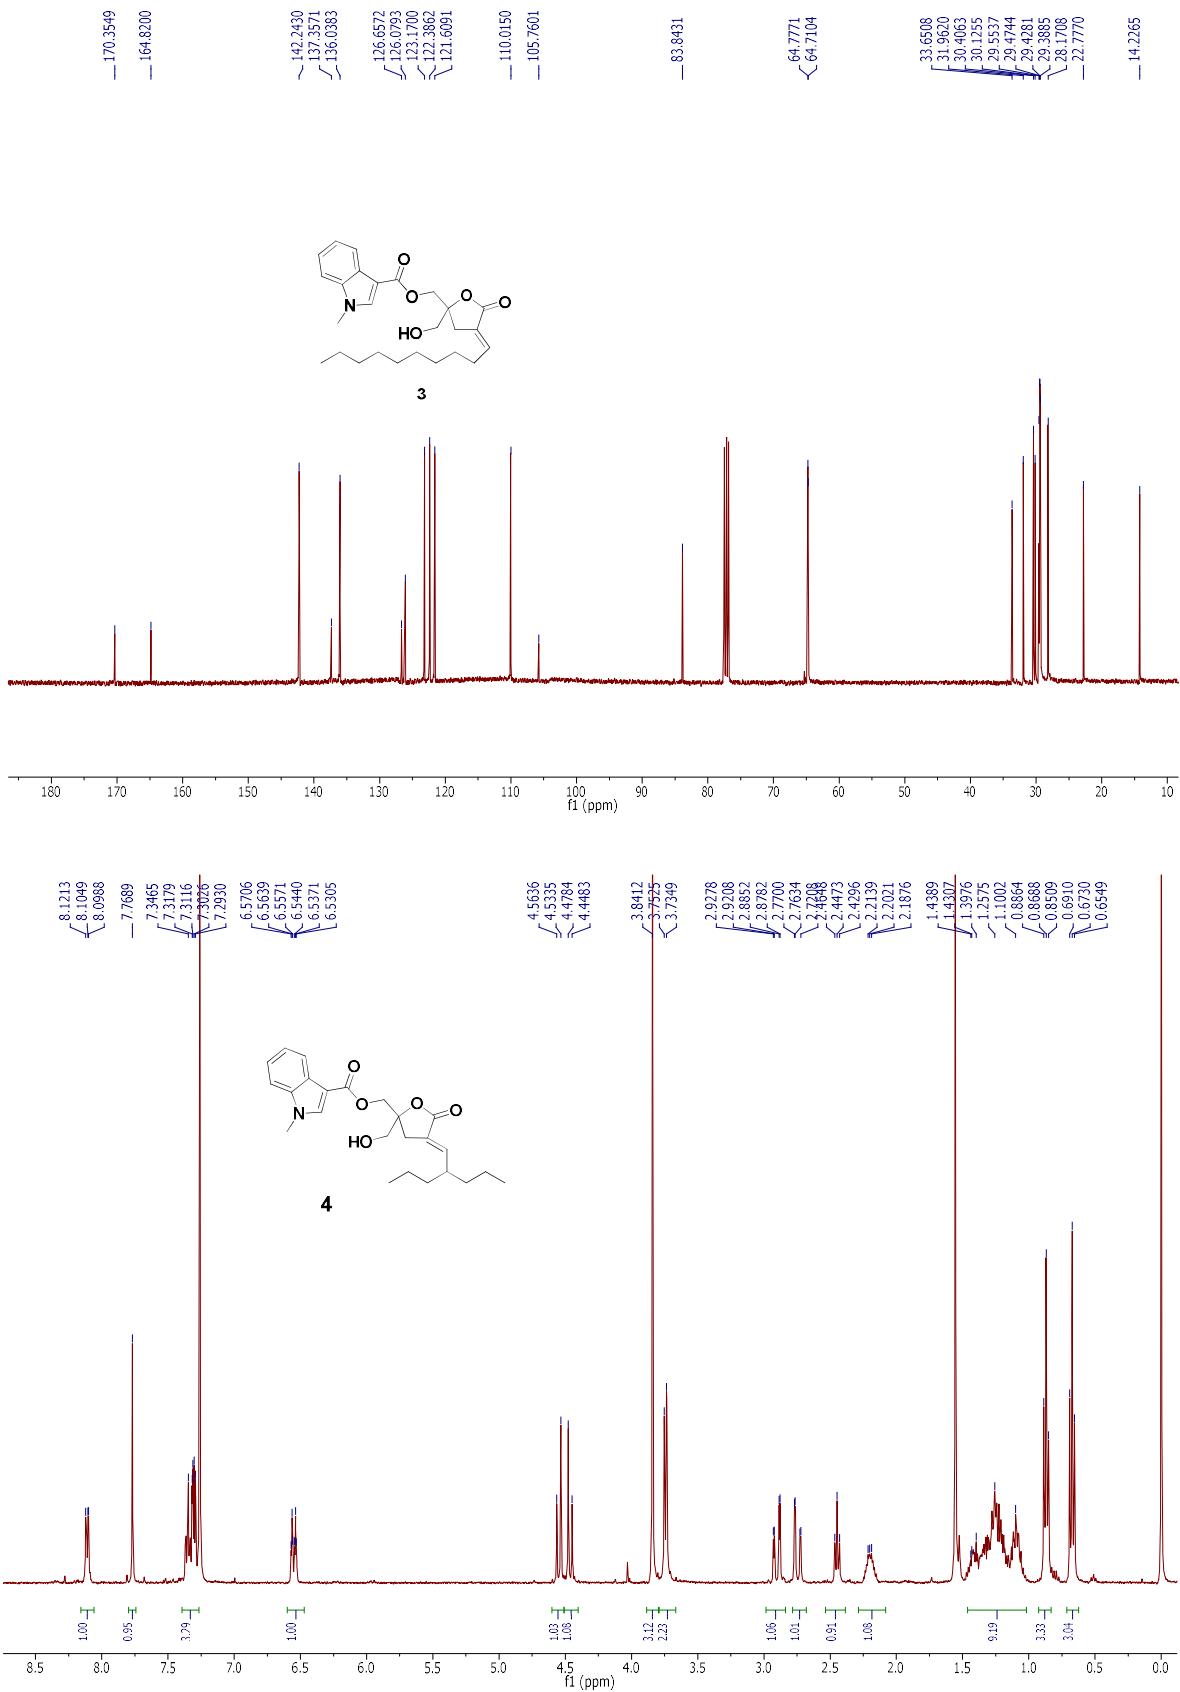

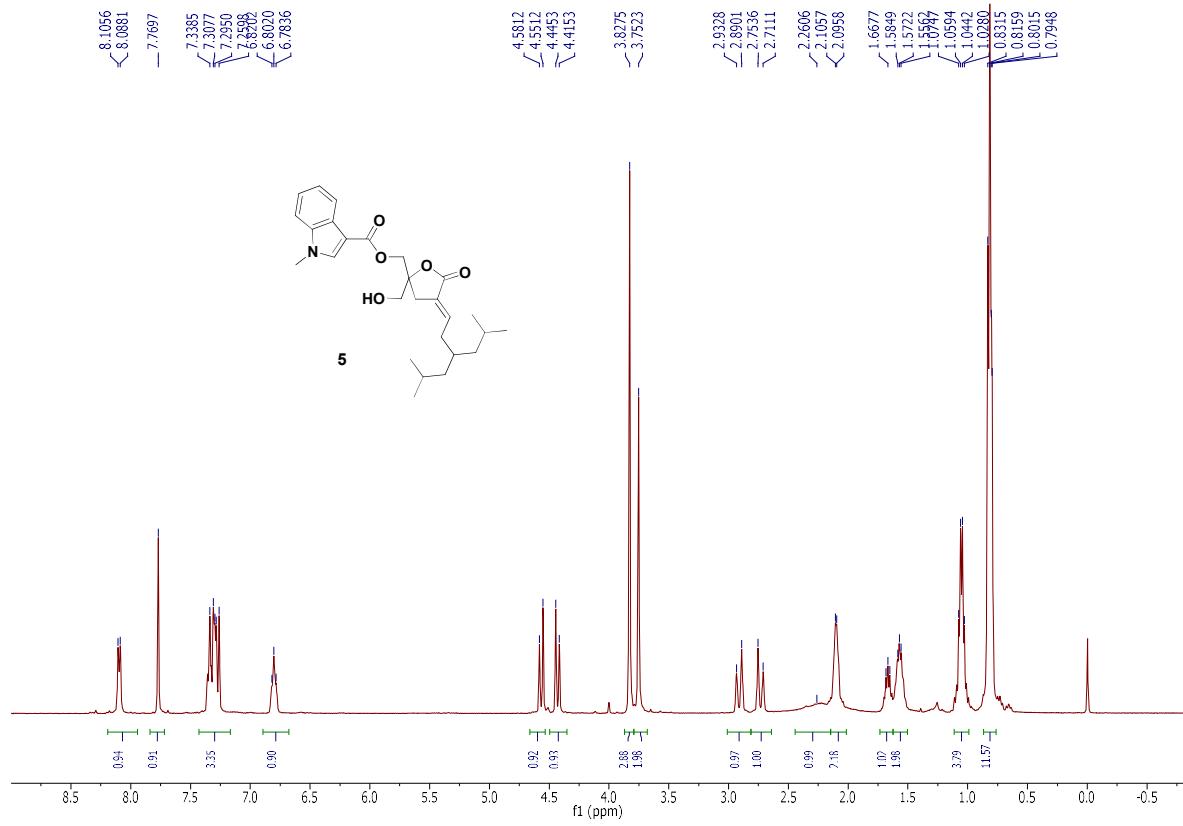

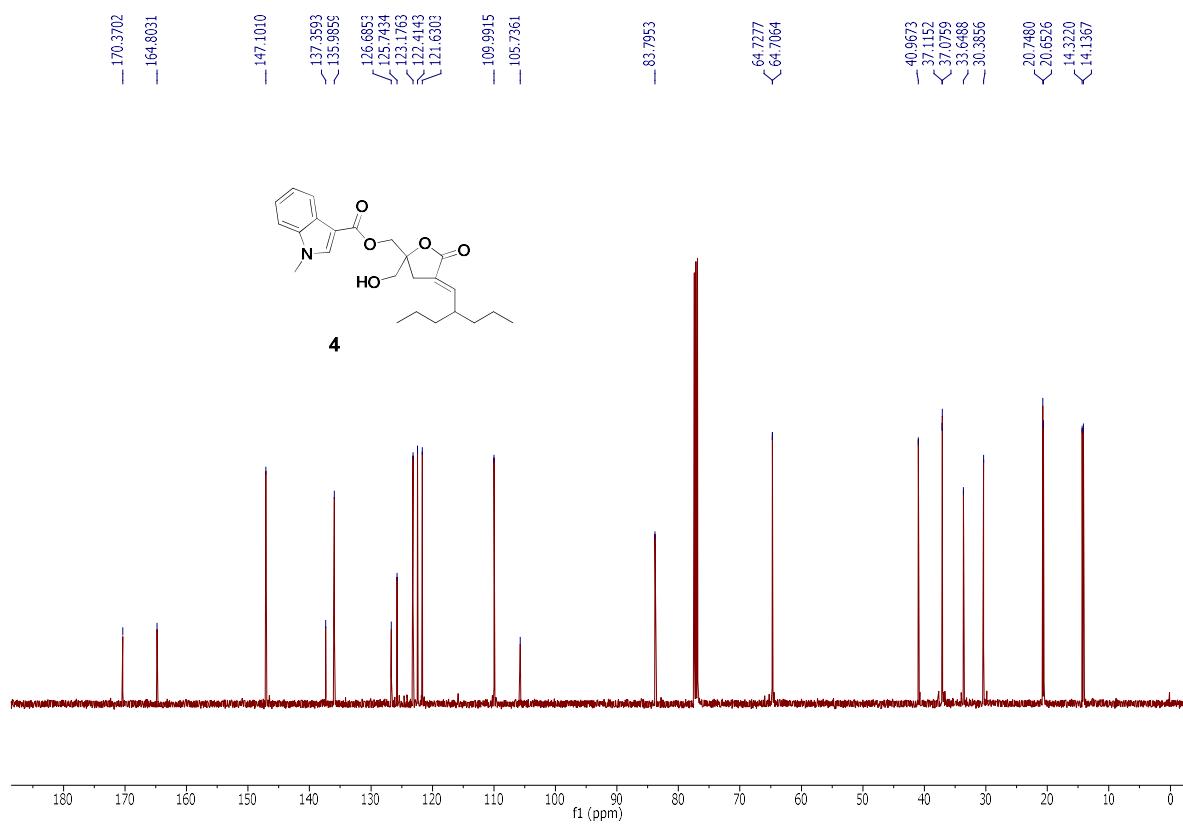

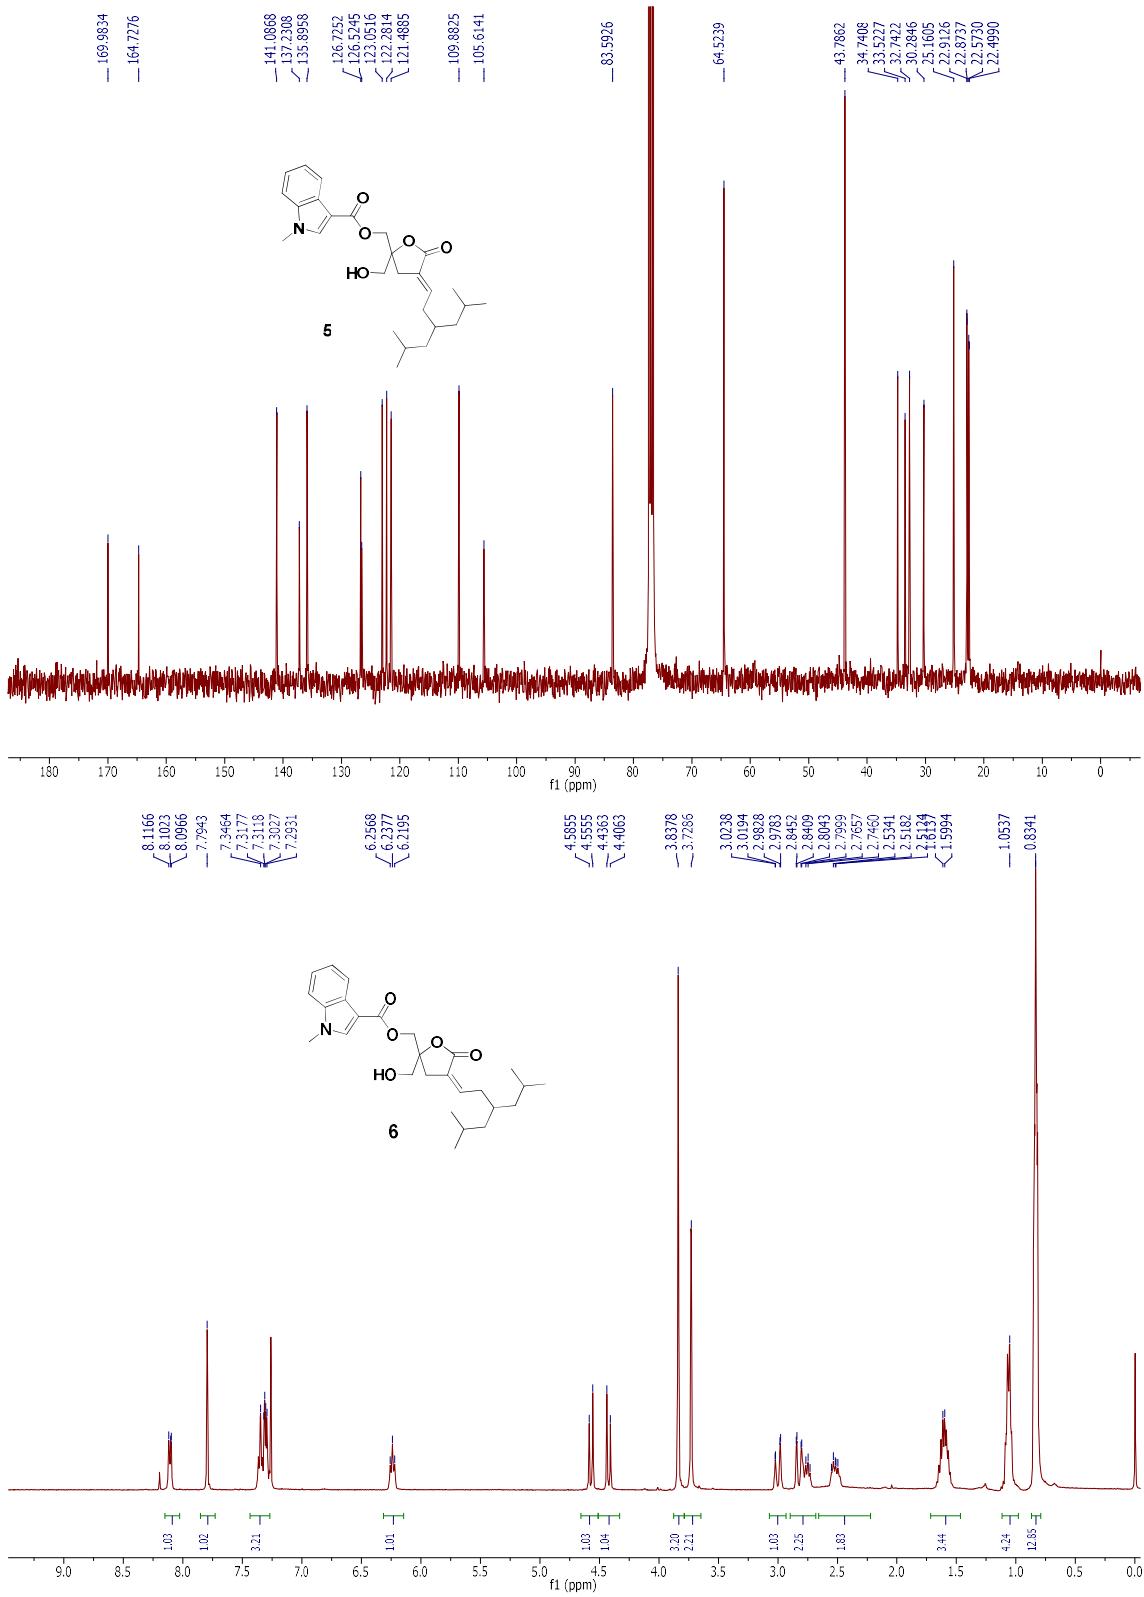

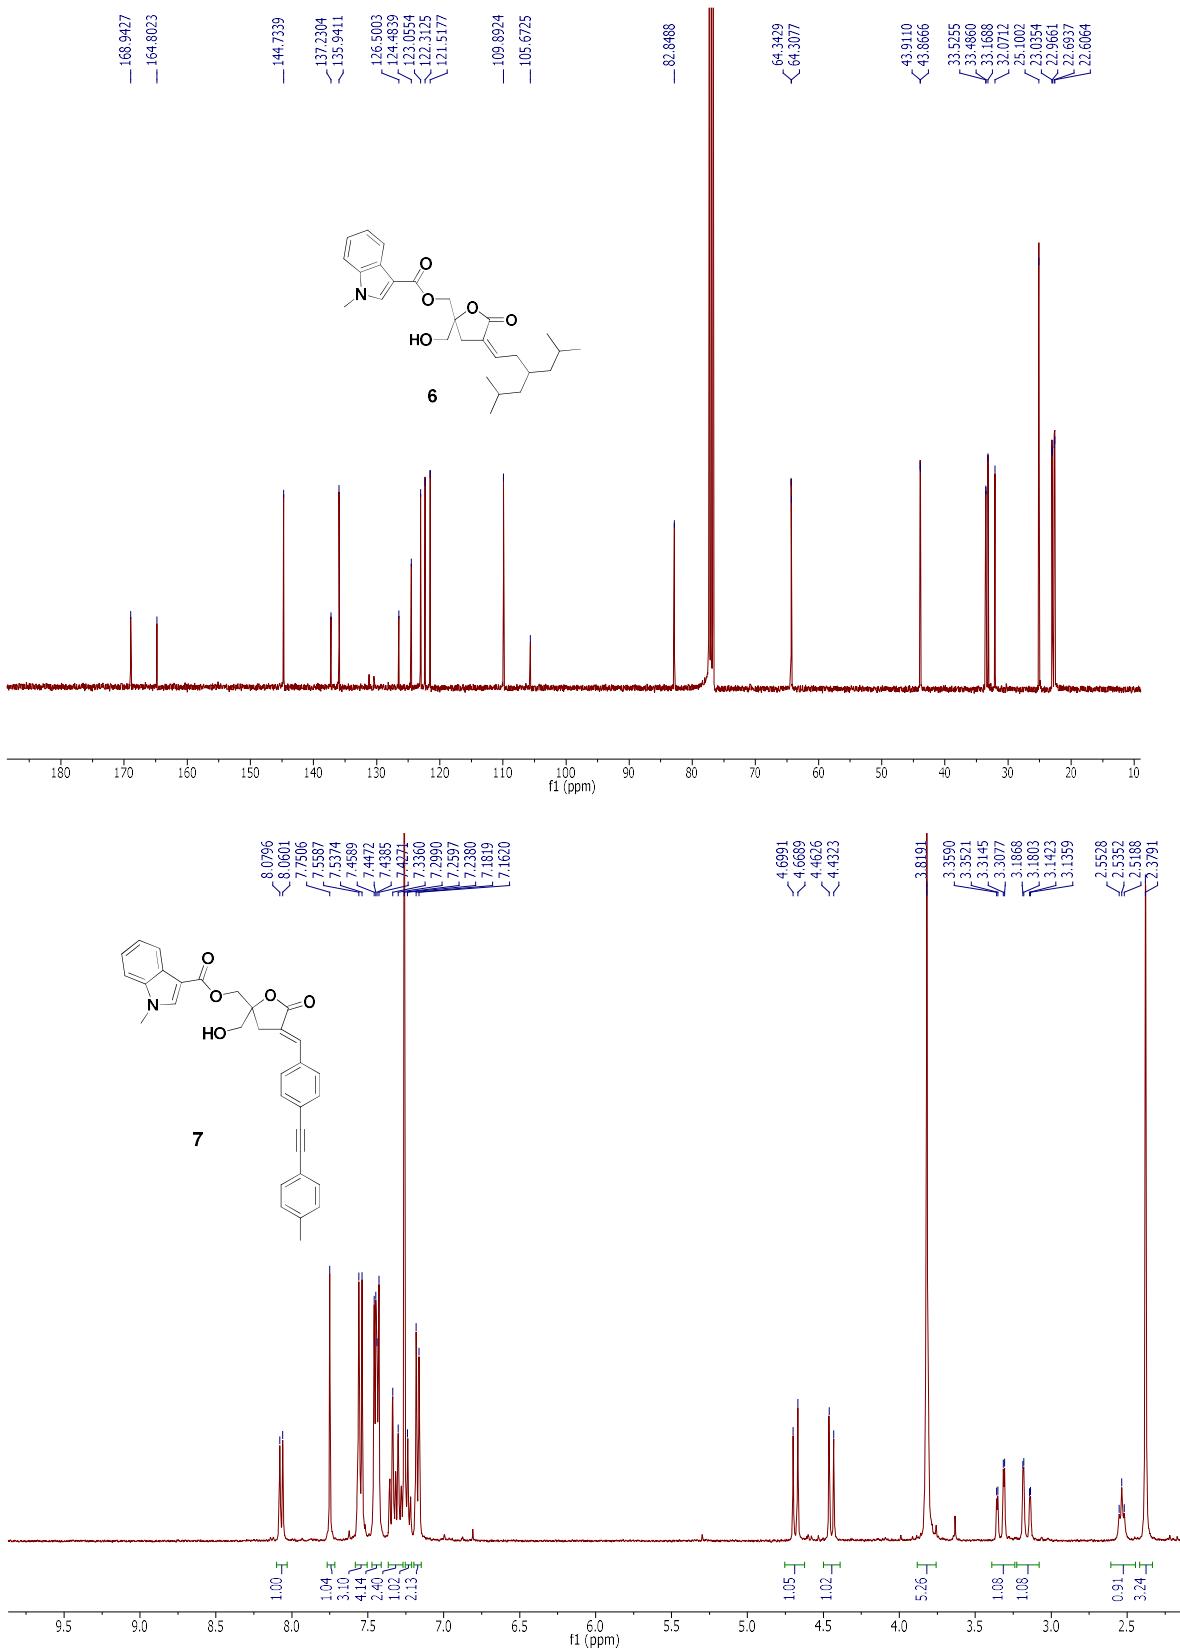

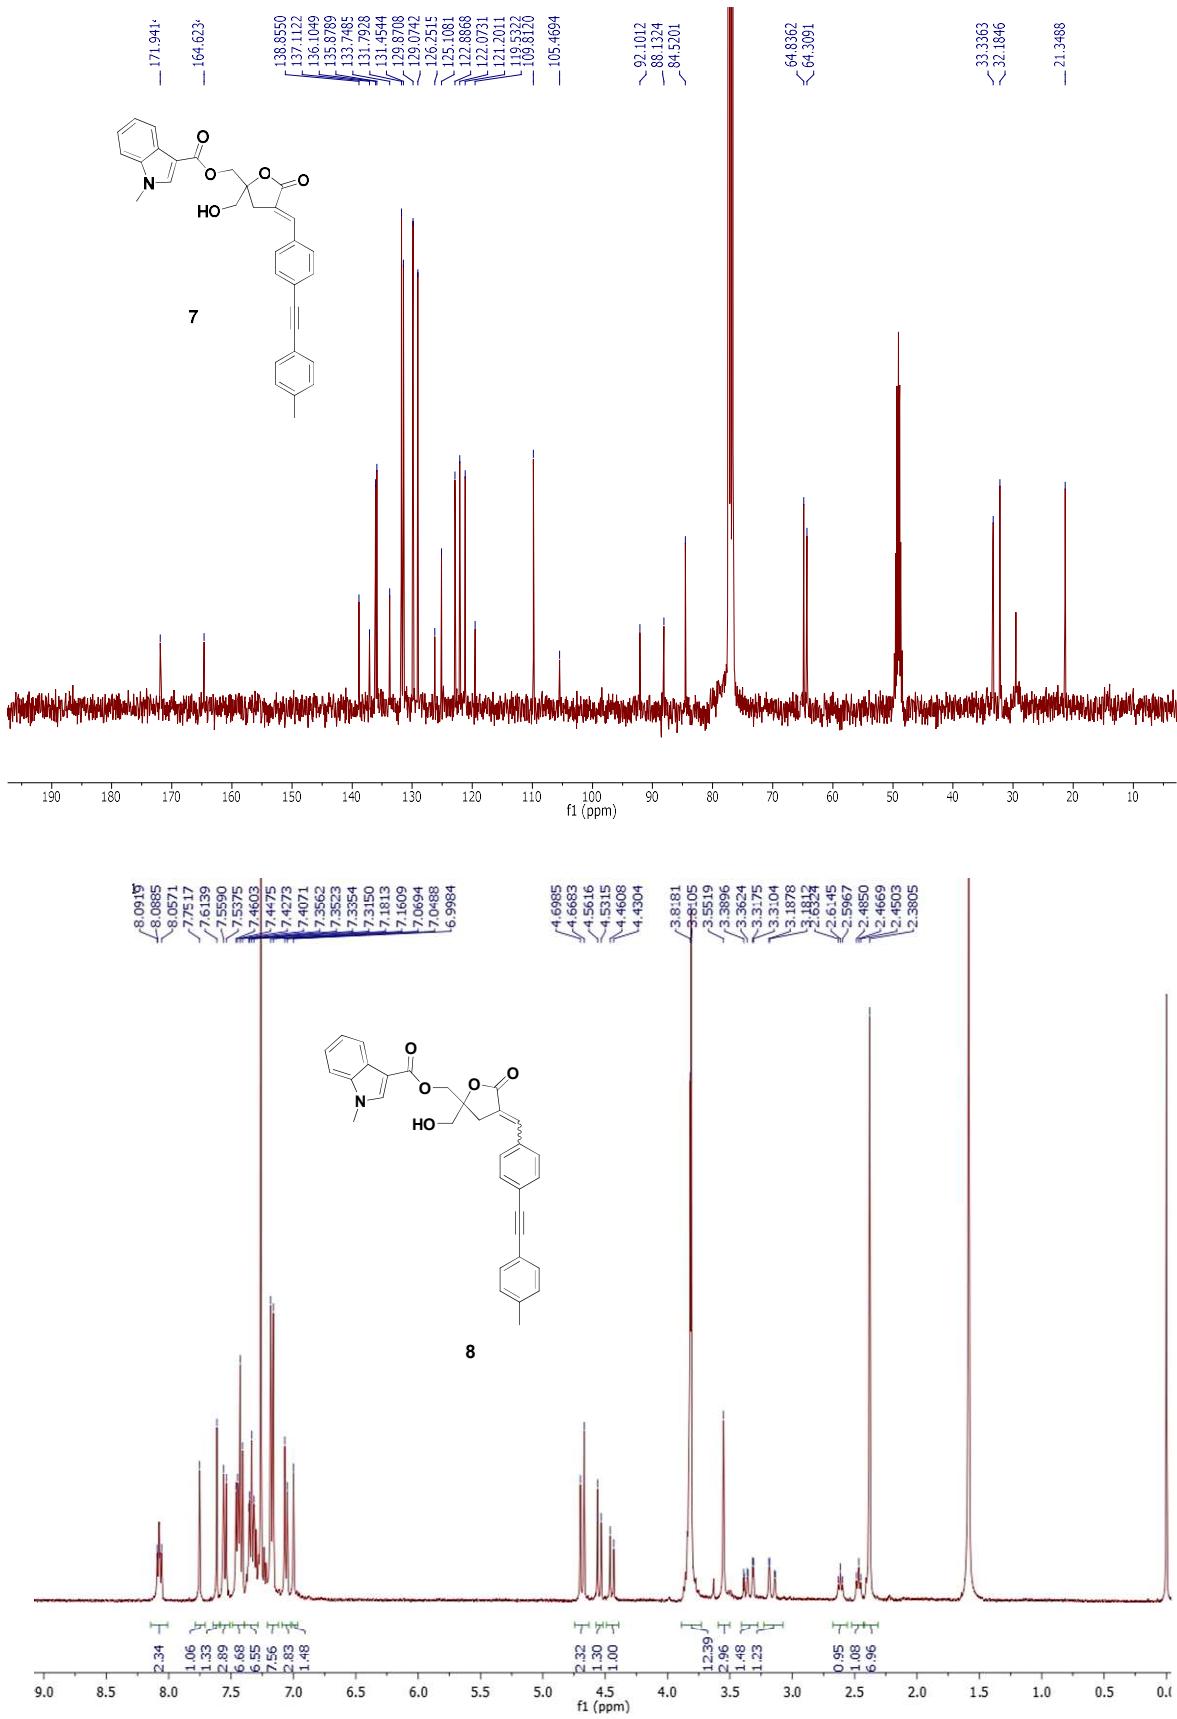

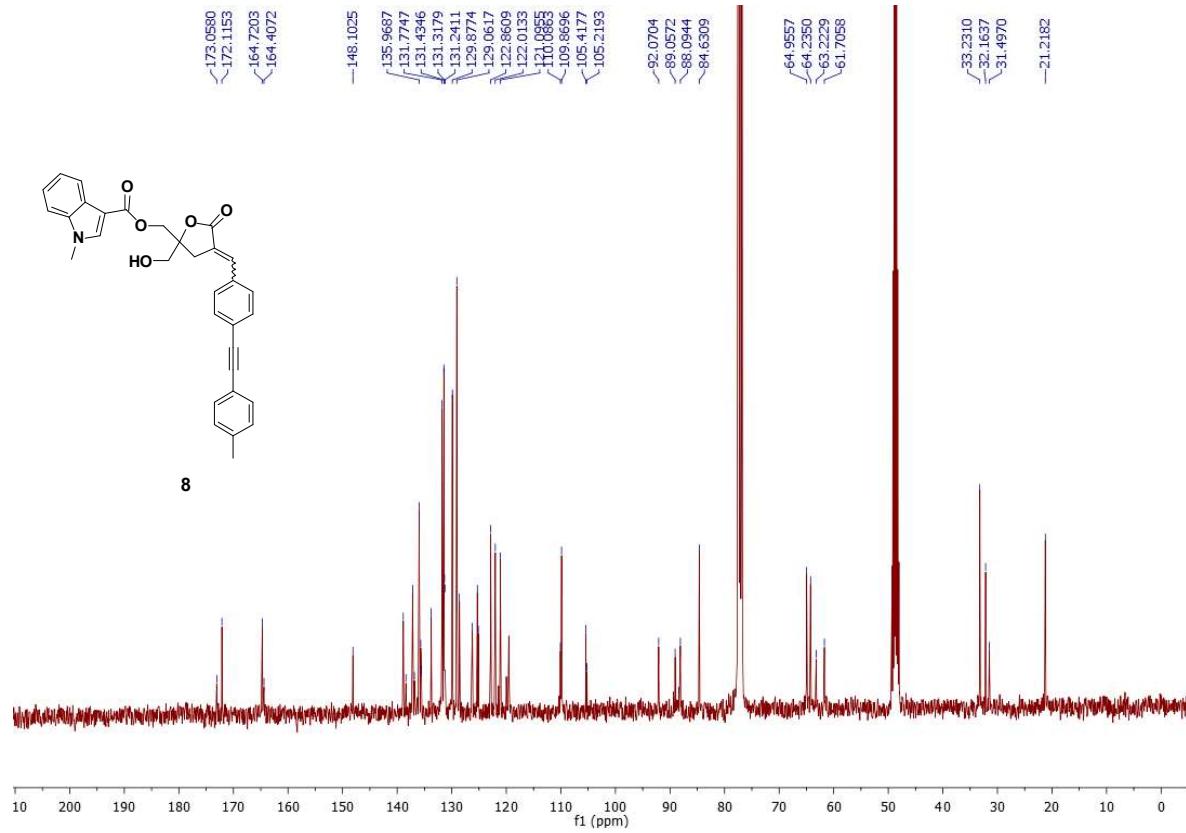

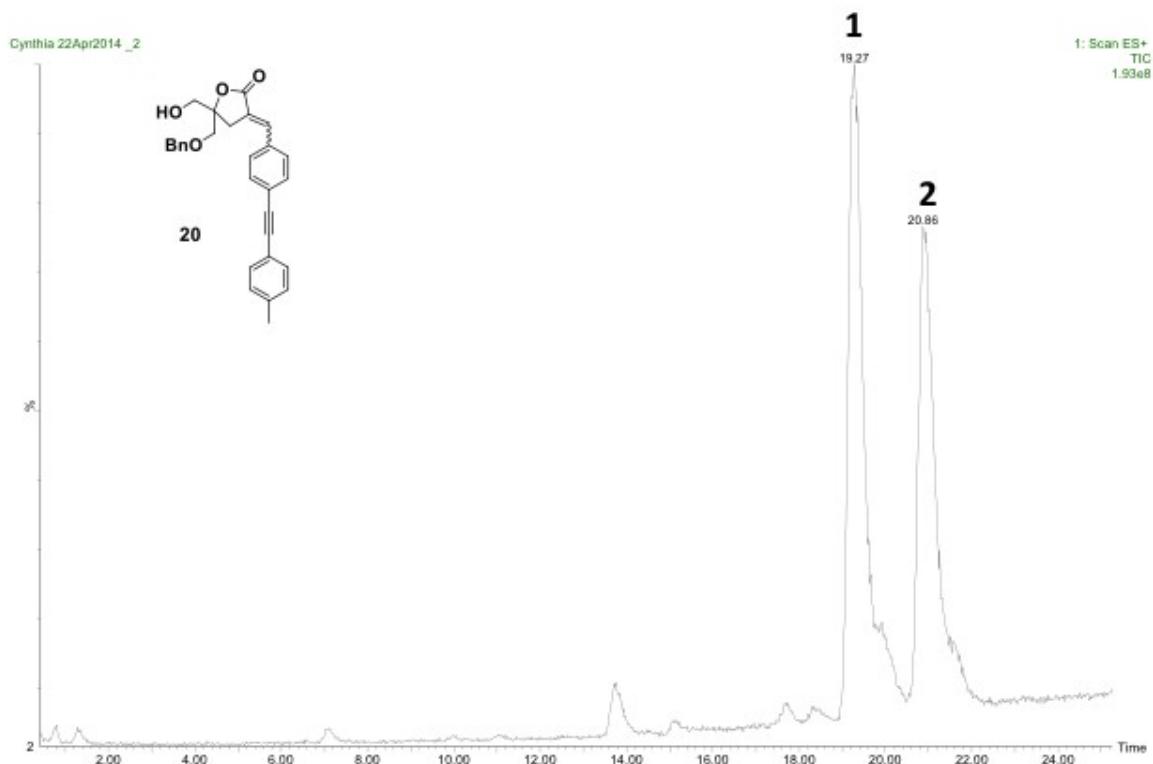

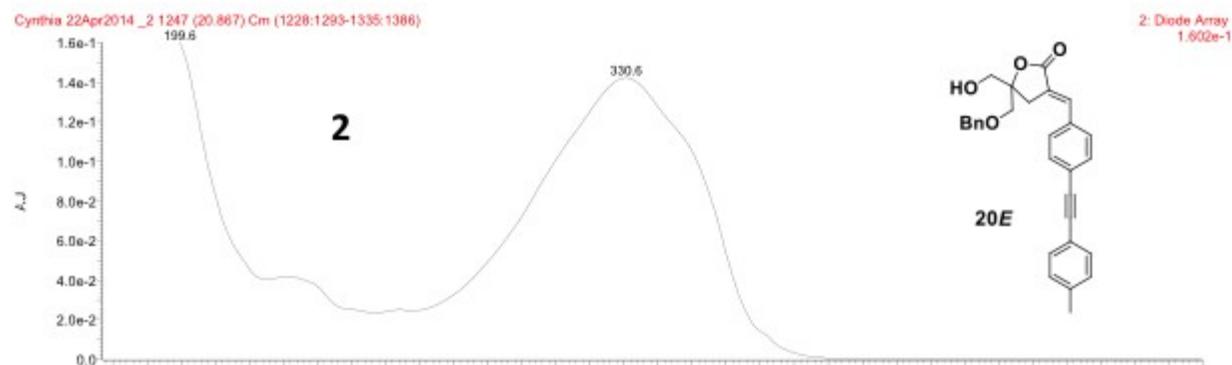

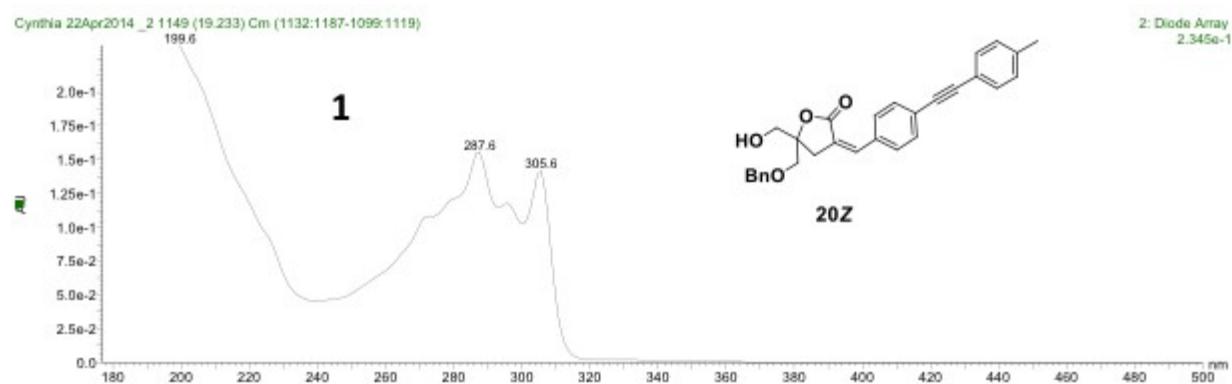

HPLC Analysis of **20** (*E/Z*)

PDA-LC/MS analysis was performed on a Waters Alliance 2695 HPLC system with a PDA detector on a XTerra MS C18 column (Waters, Milford, MA, USA, 100 mm × 2.1 mm, 3.5 μ m), attached to a Quattro Premier XE triple-quadrupole mass spectrometer (Waters, Milford, USA). The mobile phase A was H₂O (0.1% formic acid) and the mobile phase B was acetonitrile (0.1% formic acid). Gradient elution was set as follows: 0–0.1 min, 32.5% to 73% B in 30 min. The mobile phase flow rate was set at 0.5 mL·min⁻¹. The column temperature was kept at 40 °C.

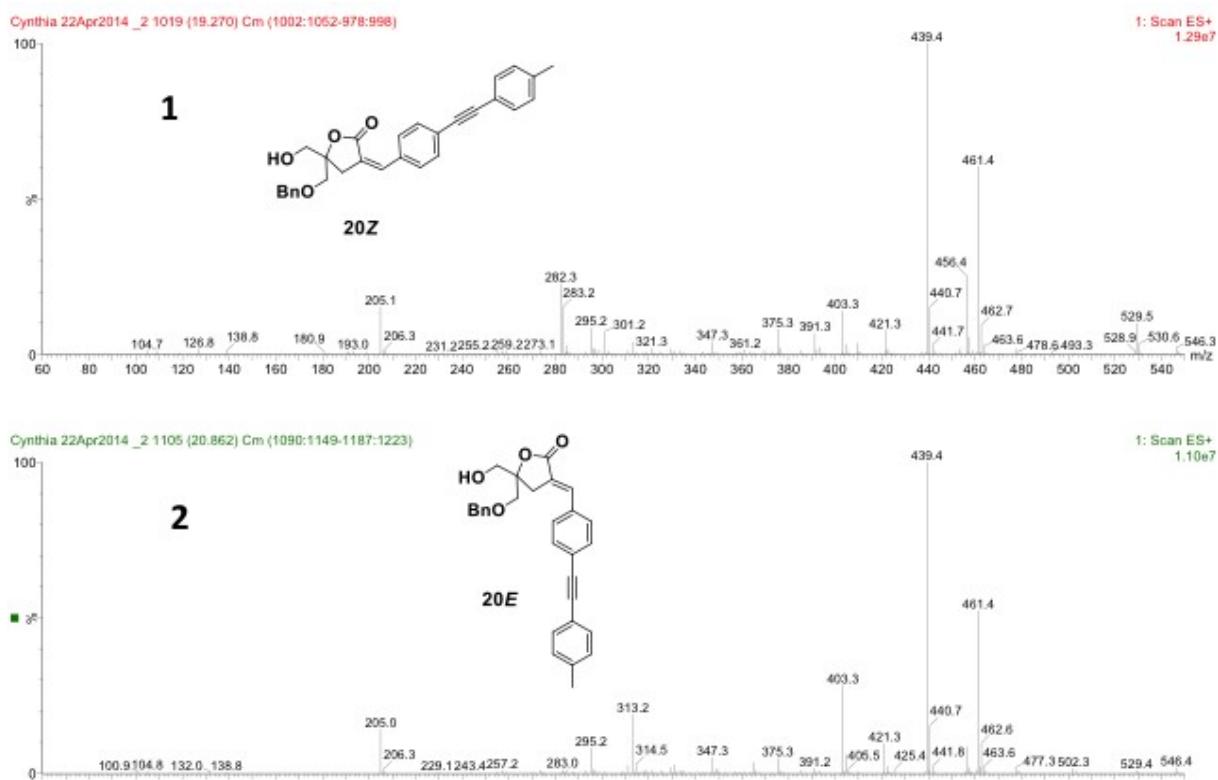

(A)

(B)

(C)

(A) HPLC-MS chromatogram of **20** (E/Z mixture). Retention times: peak **1**, 19.27 min; peak **2**, 20.86 min. (B) UV spectra: peak **1** corresponding to *Z* isomer and peak **2** corresponding to *E* isomer. (C) MS spectra of peak **1** and **2**. Both peaks showed the same $(M+H)^+$ (439) and $(M+Na)^+$ (461) species that are in agreement with the proposed structures. E/Z assignments from UV spectra were made by comparison with related compounds.
