**Supplementary Figure 2S.** Distance (Neighbor-joining) trees for EF-1 $\alpha$  (A), enolase (B) and  $\beta$ -tubulin (C) sequences. Main bootstrap proportions are shown at the internodes. The evolutionary distance between two sequences is obtained by summing the lengths of the connecting branches along the horizontal axis, using the scale at the bottom. See (23) for details of EF-like sequences. Vp, Viridiplantae; Me, Metazoa; Fu, Fungi; Ch, Choanoflagellates; Eu, Euglenozoa; St, Stramenopile. See ref. 23 for details about EF-like sequences.
