Supplementary Figure S1. Mouse nascent nephrons.

(A) Immunostaining of murine renal vesicles at E15.5. The neighbouring section to that shown in the upper panels of Figure 6A was stained to confirm the identity of the ureteric bud, which is positive for cytokeratin-8 (CK8). SALL1 is expressed in the nephron progenitors and the distal part of the renal vesicles. (B) Immunostaining of murine S-shaped bodies at E15.5. The neighbouring section to that shown in the lower panels of Figure 6A was stained for NCAM to clearly show the S-shaped bodies. PAX8 is expressed in the precursors of podocytes and parietal cells. White arrowhead: renal vesicles; arrow: precursors of glomerular parietal epithelia; black arrowhead: precursors of podocytes. np: nephron progenitors; ub: ureteric bud. Scale bars: 50 µm.

Supplementary Figure S1

Supplementary Table S1 | The percentages of nephron progenitors in the induced spheres from wild-type (+/+) and *PAX2*-null(-/-) clones.

	+/+		-/-	
	Clone 1	Clone 2	Clone 1	Clone 2
Experiment #1	10.5 %	1.8 %	19.8 %	14.9 %
Experiment #2	23.2 %	26.2 %	25.8 %	20.8 %
Experiment #3	12.5 %	22.2 %	7.9 %	4.7 %
Average	15.4 %	16.7 %	17.8 %	13.5 %
Standard Error	3.9 %	7.6 %	5.3 %	4.7 %
	vs +/+ Clone 1		p=0.36	p=0.38
	vs +/+ Clone 2		p=0.45	p=0.36

The percentages of the ITGA8+/PDGFRA- nephron progenitor fraction are shown.

Supplementary Table S2 | Primer sequences used for qPCR.
