Chr 22

Identification of the candidate regions for Family 4 (GC14302) using the Homozygosity Haplotype approach

Five affected family members with SNP chip data were included in the analysis. A densitogram of the genomic Regions with a Conserved Homozygosity Haplotype (RCHHs) is depicted. The darker the color, the more individuals share a HH in the region. Black regions indicate RCHHs that are shared by all 5 affected family members included in the analysis
